Resolution: high definition

Directed By: Daniel Licht

Written By: Daniel Licht

Narrated By: Katie Flammam

Production Company: Pronghorn Productions

Location: North and South Dakota,
Colorado, Wyoming USA

Year: 2025

LOGLINE

A dramatic year with an iconic keystone species—the bison—unfolds in birth, play, battles, predation, and survival, revealing how this mighty beast sustains prairies, biodiversity, and people.

SYNOPSIS

The American bison is more than wildlife—it's a living force that shaped North America. This film showcases bison life across the seasons: risky births, playful calves, thunderous stampedes, relentless predators, and brutal winters. Viewers witness the drama of survival and the power that makes the bison a keystone species. Once nearly wiped out — now the U.S. national mammal — the bison's story resonates with history, culture, nature, and conservation. Stunning imagery, intimate behavior, and high-stakes encounters make this a must-see documentary.

TAGLINE: *Born fragile, forged fierce—the survival epic of America's iconic mammal.*

Director, Daniel Licht

Dan has 20+ years in the wildlife film industry operating under his company *Pronghorn Productions* (www.pronghornproductions.com), a full-service nature and wildlife video company. He has sold \$2 million in footage through his own his catalog (www.hdnaturefootage.net) and other commercial sites. A sampling of nature and wildlife demos from his collection can be seen at www.wildlifefootage.net.

In a former life he was a professional biologist with scores of scientific publications and books to his credit (see www.danielslicht.com).

Keystones: Nature's Most Important Species

The film is part of a nature series that explores the plants and animals that hold ecosystems together. Season 1 begins with ***Dog Wars - Life and Death in a Prairie Dog Town***, where underground burrows, complex social bonds, and relentless predators key the prairie dog's role as both prey and provider. ***Giants of the Sonoran*** centers around the iconic saguaro cactus, a desert giant that offers food, shelter, and nesting sites to birds, mammals, reptiles, and insects. In ***Bison - Feel the Thunder***, America's national mammal endures blizzards, predators, and competitors, maintaining the fragile grasslands for birds, insects, plants, and countless others.

Together, these stories highlight nature's intricate balance—and hint at what is lost when keystone species vanish. Season 2 promises more keystone tales to come.
