

## Our OpEx Approach

Takes an integrated path through process optimisation, asset management, organisational capability and compliance to drive long-term sustainment.

Drawing on extensive assessment and implementation experience, the OpEx Group created its patented “Quad Model,” an integrated framework built around four core deliverables of Operational Excellence.

Streamline processes, eliminate inefficiencies, and enhance productivity through data-driven decision-making, innovation and continuous improvement.

Embed standards, governance, and regulatory assurance into daily operations, ensuring accountability and confidence in performance outcomes.

Build capability, leadership, and engagement across all levels, empowering teams to sustain improvement and drive cultural alignment.

Maximise asset reliability, availability, and lifecycle value by aligning maintenance, planning, and investment with operational goals.
