

 **SIMULATED MEDICAL REPORT (BEFORE)**

Diagnostic Imaging Report
Abdominal Ultrasound (Limited Study)

Patient Information

Name: Sarah M.
Date of Birth: March 12, 1991
Sex: Female
Patient ID: 847392

Study Information

Procedure: Ultrasound Abdomen (Limited)
Date of Exam: April 9, 2026
Referring Provider: Primary Care Physician
Indication: Elevated liver enzymes, dyslipidemia. Rule out hepatic steatosis.

Technique

Limited abdominal ultrasound was performed using standard grayscale imaging.

Findings

Liver:

The liver measures approximately 19.0 cm in craniocaudal length. The hepatic contour appears smooth. There is diffusely increased echogenicity consistent with fatty infiltration. No focal hepatic lesion identified.

Gallbladder:

Normal in appearance. No gallstones or wall thickening identified.

Biliary Tree:

No intrahepatic or extrahepatic biliary ductal dilatation.

Pancreas:

Visualized portions appear unremarkable.

Right Kidney:

Measures approximately 12.3 cm. No hydronephrosis or renal calculi identified.

Left Kidney:

Measures approximately 10.2 cm. No hydronephrosis or renal calculi identified.

Spleen:

Measures approximately 9.5 cm. Normal echotexture.

Aorta and IVC:

Visualized segments appear within normal limits.

Urinary Bladder:

Unremarkable.

Free Fluid:

No free fluid identified.

Impression

- Hepatomegaly.
- Diffuse hepatic steatosis, moderate to severe.
