

RAVI UX Portfolio

Nothing fancy portfolio
just a problem solving showcase
for enterprise applications.

Business Goals

- Design mobile portal for the hospital
- Improve patient engagement
- Increase operational efficiency
- Strengthen patient loyalty
- Promote health education
- Maintain HIPAA compliance
- Secure messaging to providers
- Facilitate dependent care from a single platform

UX Research

- Interviewed hospital management
- Interviewed healthcare providers
- Shadowed clinical staff
- Conducted patient interviews & surveys
- Reviewed existing EHR systems
- Studied HIPAA compliance
- Analysed competitor apps

Ravi

My design thinking approach

UX Design

- Wireframes in Visily.Ai
- Final designs in Figma
- Presented to group for A/B testing
- Touch target sizing from user feedback
- Increased contrast for accessibility
- Responsive design

Sensitive info: Should we avoid to throw on notifications?

Gautham said no.

Do we need integration on other devices/watch bt now?

What is timeframe?

SANA Health Systems

Desktop Patient Portal

Business Goals

- Redesign ageing and legacy portal
- Streamline navigation for faster access to patient data
- Reduce no. of screens
- Usability over aesthetics
- Minimize cognitive load with clean, intuitive UI
- Improve data visualization for labs, vitals, and trends
- Ensure compatibility with existing EHR systems and workflows
- Support role-based access and permissions for providers, nurses, and admins
- Design for accessibility across all user types
- Include quick actions for high-frequency tasks (e.g. refill, message, note)
- Facilitate onboarding with contextual help and tooltips
- Maintain HIPAA compliance

UX Research

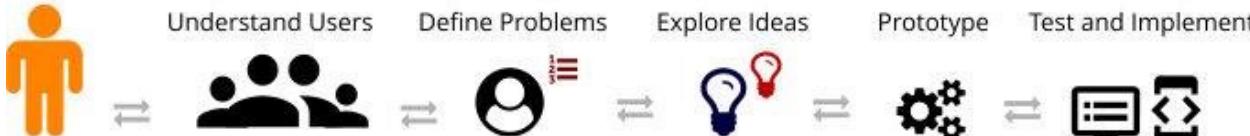

- Performed heuristic evaluation of legacy portal
- Interviewed admins, doctors and staff
- Performed contextual inquiries
- Created user surveys
- Benchmarked competitor portals and EHR systems
- Analysed HIPAA compliance

UX Design

- Created hi-fi wireframes in Visibly.Ai then in Figma
- Validated feasibility with Offshore team
- Designed role-based dashboards
- Integrated smart defaults and progressive disclosure
- Iterated designs based on stakeholder feedback
- Checked for final production design consistency

SANA Systems AI Web presence

Business Goals

- Redesign old school site
- Make it modern looking
- Reduce no. of pages
- Improve overall usability
- Leverage new tools
- Sync with other SANA systems

UX Research

- Conducted a comprehensive UX audit
- Performed competitive analysis
- Translated stakeholder feedback into design requirements

UX Design

- Created lo-fi wireframes
- Redesigned the interface using modern design principles
- Streamlined navigation and content structure
- Reiterated designs

My design thinking approach

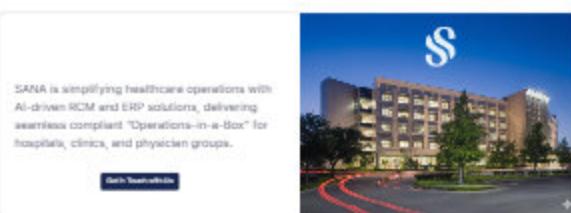

SanaSystems.ai

The Future of AI-Powered Healthcare Operations
Revolutionizing healthcare operations with AI, enabling hospitals, clinics, and physician groups to improve revenue cycle management and enterprise planning with minimal overhead and maximum efficiency.

[Learn more >](#)

“ Healthcare operations are drowning in complexity—where manual billing, coding inefficiencies, and siloed systems not only slow down care but bleed revenue. As compliance demands evolve, hospitals must choose between transformation or falling behind. ”

The Problem

Complex billing processes. High denial rates & revenue loss. Manual, paper-based processes lead to delays, errors and slow reimbursement cycles.

Manual coding inefficiencies. Slow workflows + increased errors. Manual coders are often overburdened, while automated tools & software can reduce errors and increase efficiency and accuracy.

Siloed operations. Lack of integration. Delays patient care. Disconnected systems prevent real-time collaboration, causing system-wide inefficiencies and increasing costs.

Evolving compliance requirements. New regulations require strict adherence to ensure compliance with increasing healthcare regulations, increasing costs of audits and financial penalties.

Our Solutions

Documentation Accuracy

Improve clinical documentation with AI and NLP modules, reducing errors and ensuring provider coding.

Streamlined Billing & Revenue Cycle

Leverage AI-powered RCM to automate claims processing, reduce denials, and accelerate reimbursement.

Optimized Hospital Operations

Enhance efficiency with an integrated ERP that connects workflows, staffing, and inventory management.

EASY Compliance & Reporting

Implement compliance tracking and customized reporting tools.

Our Proven Performance Metrics

On-Time Delivery	Revenue	Claims	Billing	Clinical Workflows	Efficiency	Cost	Optimization	Days
10 Years	-\$50K	99%	98%	-0.1%	22-28%	1.95	30	Integration Time

SANA HRMS

Built for scalability and ease of use, Sana HRMS simplifies complex HR processes from recruitment and onboarding to performance management and employee engagement. With powerful automation, secure cloud infrastructure, and intuitive dashboards, it enables HR teams to focus more on strategy and people, and less on paperwork and manual tasks.

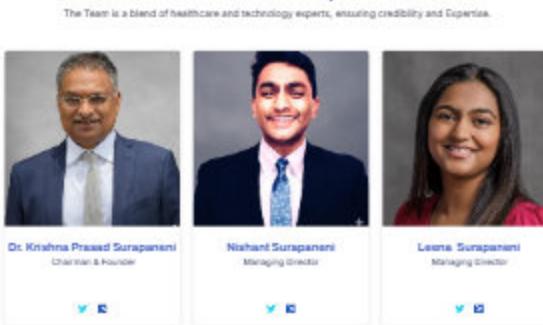

“Sana redefines hospital and clinic operations—optimizing efficiency, compliance, and financial performance through automation and data intelligence.”

Sana Systems delivers a comprehensive suite of AI-powered healthcare solutions designed to streamline operations, optimize resource management, and enhance clinical, financial, and imaging workflows.

Our Healthcare Operations solutions improve documentation, automate coding, enhance compliance, and leverage AI for better clinical decision-making. Our Enterprise Resource Planning (ERP) tools drive efficiency in workforce scheduling, asset management, and contract tracking, ensuring seamless hospital operations. We empower financial teams with robust Financial & HR Management tools, simplifying payroll, budgeting, and compliance. Lastly, our Medical Imaging & Data Solutions provide secure, scalable imaging storage and interoperability, enhancing diagnostic workflows.

With AI, automation, and interoperability at the core, Sana Systems is redefining healthcare efficiency, ensuring better patient care, operational excellence, and regulatory compliance.

Meet the Leadership Team

“Sana MMS is a versatile, industry-agnostic **Inventory Management Platform** that helps hospitals and enterprises track and optimize the flow of supplies, equipment, and materials. Whether cloud-based or on-premise, it provides real-time supply chain visibility to reduce waste, control costs, prevent stockouts, and ensure compliance.”

Deloitte

TCEQ: CCEDS/STARS Applications

Business Goals

- Redesign ageing legacy applications
- Minimize application screen count
- Reduce interaction cost
- Research user pain points
- Leverage framework
- Limit number of pop-ups
- Improve overall usability
- Leverage new tools
- Reuse components
- No new business rules
- Establish design standards across applications

UX Research

- Performed dozens of user interviews
- Performed contextual inquiry
- Created user surveys
- Analyzed survey data

Ravi

My design thinking approach

UX Design

- Created lo-fi wireframes
- Incorporated user feedback into mockups
- Validated feasibility with Dev team
- Reiterated designs
- Presented to larger user group
- Defined UX strategy
- Checked for final production design consistency

300+ lo-fi wireframes created

Projects

Beyond work

Drone Delivery Mobile App

Business Goals

- Create first of its kind mobile app concept
- Research new possibilities on consumer end
- Incorporate game changing features

- Make clickable prototype
- Make UBER like experience

UX Research

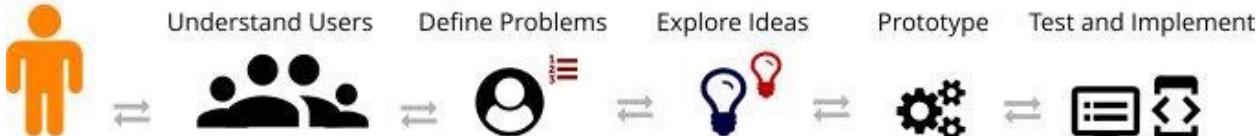

- Researched for existing similar apps
- Interviewed drone pilots (Drone Drop app)
- Interviewed EV drivers (Nissan app)
- Competitive analysis (Austin Telco Credit Union app)
- Feasibility analysis

UX Design

- Created paper sketches
- Created hi-fi mockup in Xara app
- Developed interactions in InVision app
- Incorporated feedback into mockups
- Reiterated designs

Ravi

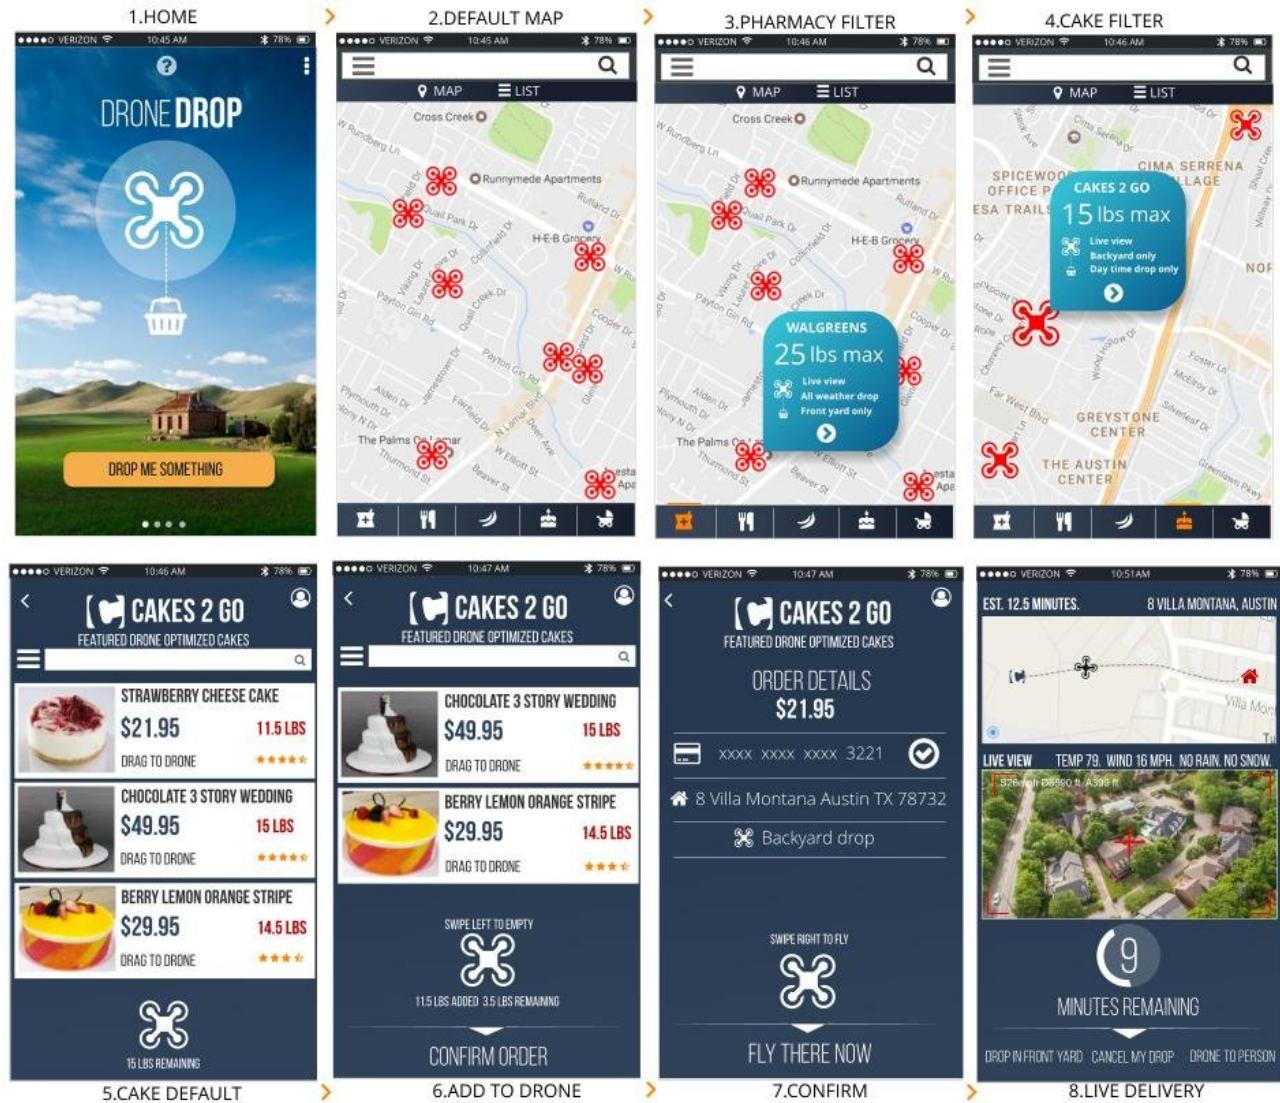

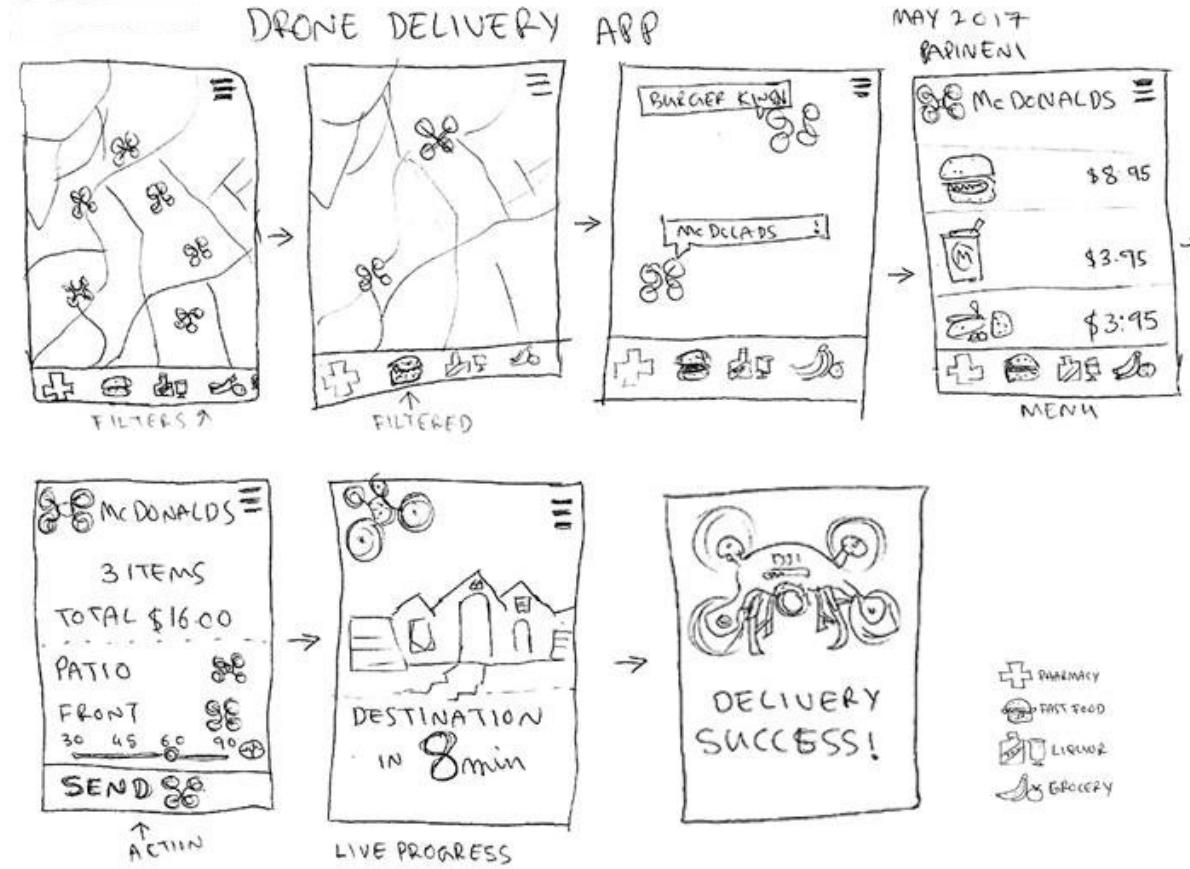

My design thinking approach

1

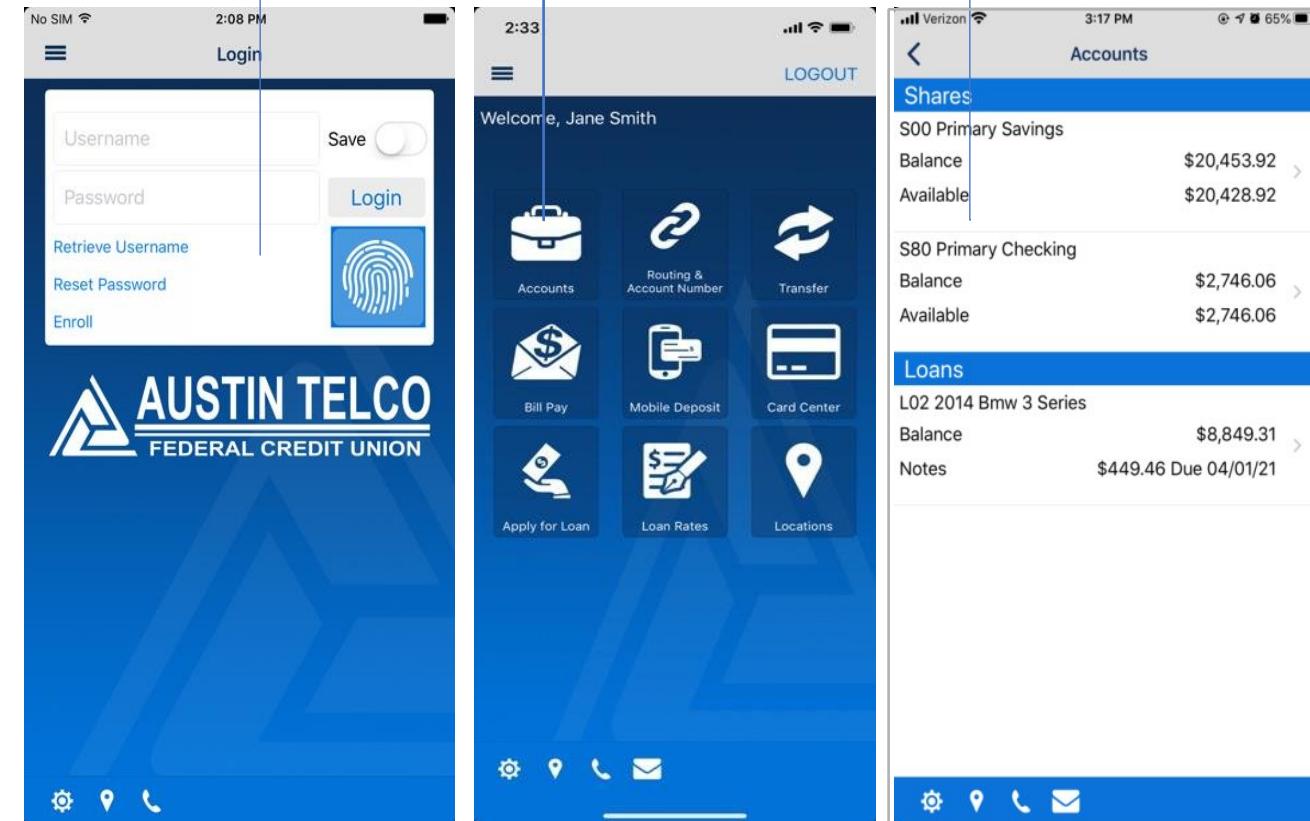

2

3

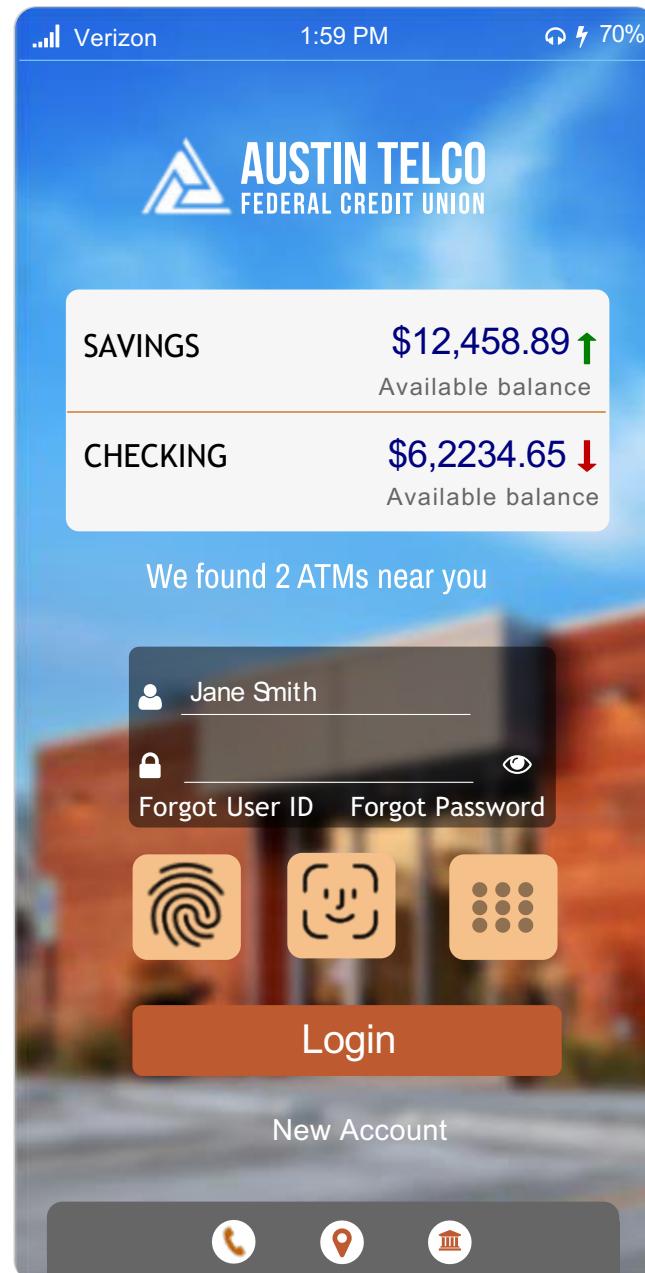

* This app has potential to address a \$95 billion dollar merchandise returns problem, with cancel order in the mid-air feature!

1 2 3

Existing design 2021

3 actions combined in one screen

Account balances shown upfront before login process

Nearest ATM locations shown based on user location

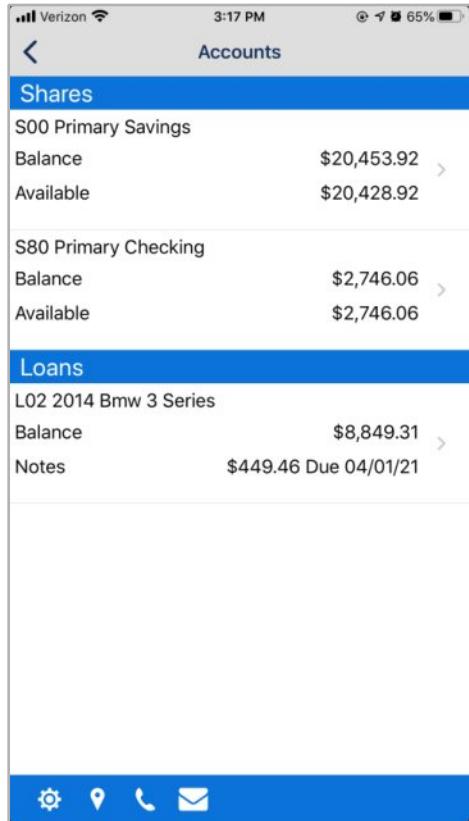

Nearest branch building displayed dynamically in the background based on location

More secure login options

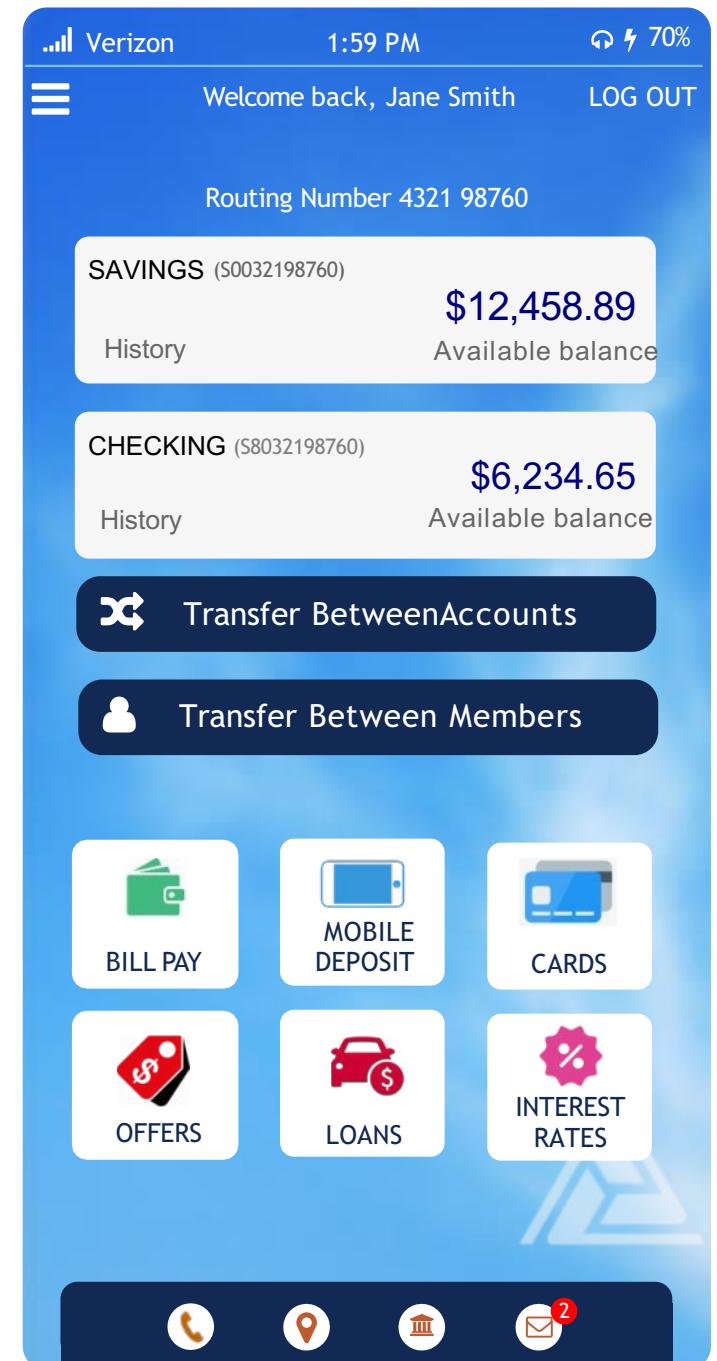

- 1
- 2
- 3

Existing design 2021

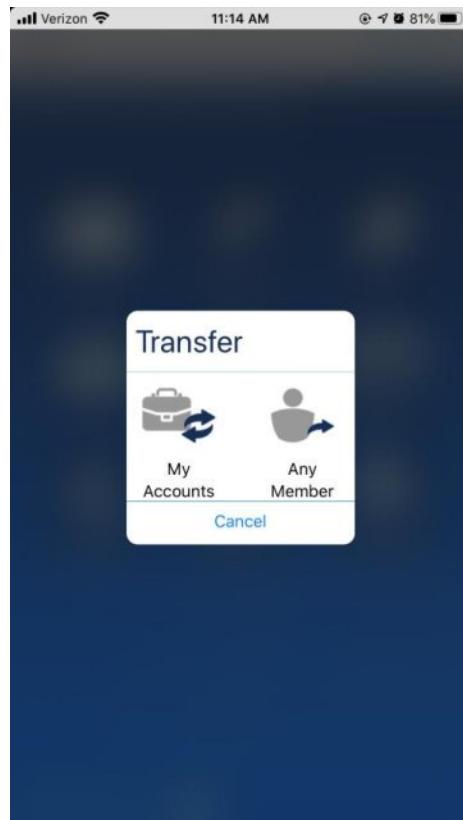

Accounts information and Transfers are combined in one screen to reduce interaction cost

1 2 3

Existing design 2021

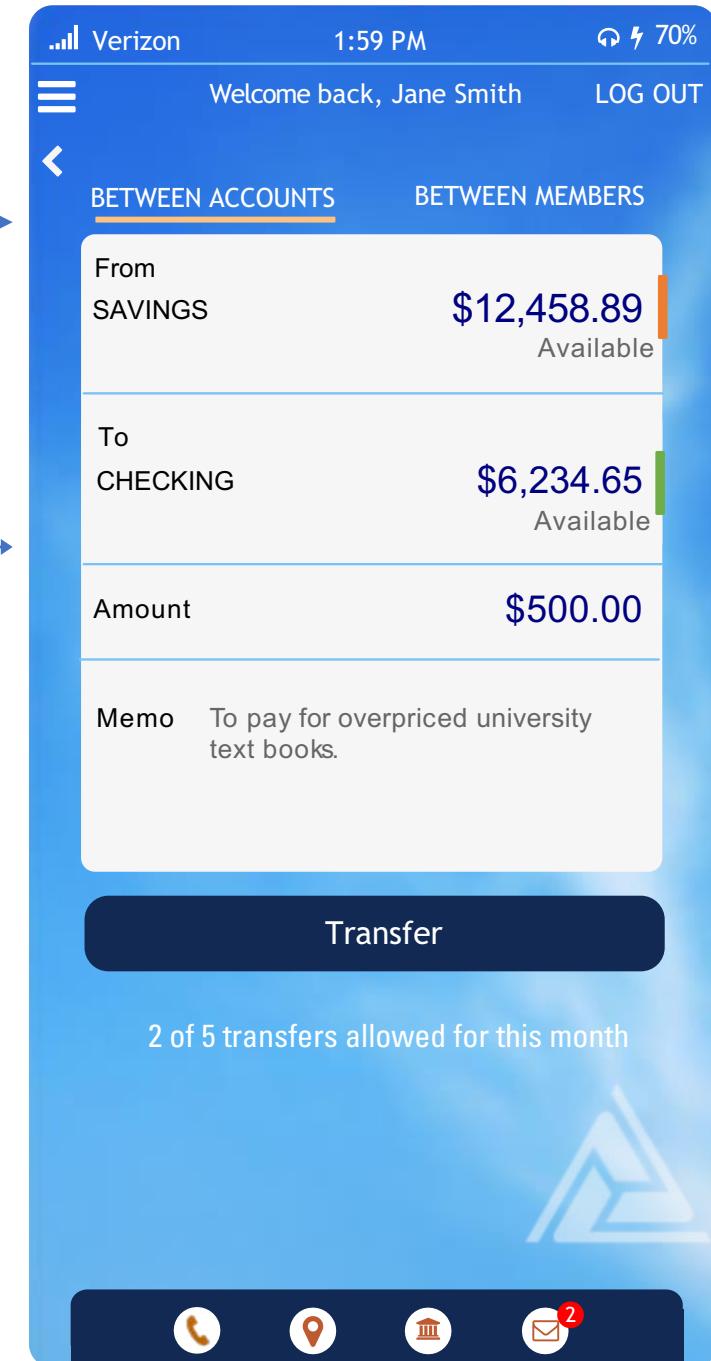

Easily swipe between 2 activities without going to main screen

Redesigned transfers screen for easy input

Upfront information on allowed transfers reduces customer calls

Business Goals

- Redesign old web presence
- Increase conversion from partners
- Make it easy to understand
- Uplift the look and feel
- Eliminate excess pages
- Focus on partner message
- Increase usability
- Must pass ADA compliance

UX Research

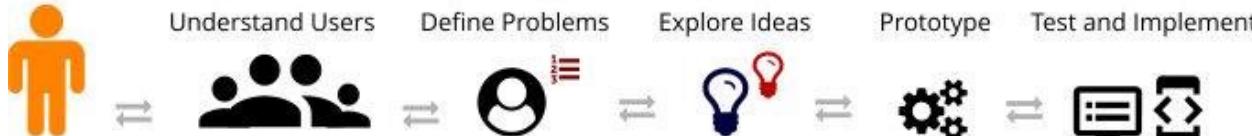

- Interviewed stake holders and partners
- Evaluated other agency web existences
- Determined the problem areas
- Design review

UX Design

- Axure design tool
- Improved call to action persistency
- Presented to smaller user group
- Incorporated user feedback into mockups
- Reiterated designs
- ADA compliant

Ravi

My design thinking approach

Engaging visuals

Persistent call to action on all pages

Hierarchical text explaining core value

Trust building facts at a glance

Business Goals

- Redesign internal application
- Reduce support calls
- Improve usability
- Leverage new portal technology
- Minimize pop-ups
- Minimize no. of screens
- Make it sleek from existing design

UX Research

- Interviewed end users
- Evaluated existing design
- Recorded pain points

Ravi

UX Design

- Axure and Adobe design tools
- Created hi-fi mockups
- Validated feasibility with Dev team
- Presented to user group
- Incorporated user feedback into mockups
- Reiterated designs
- Defined UX strategy
- ADA compliant

Hector, the Head of Household

“I want to spend as less time as possible on the computer for applying for benefits”

Age: 55

Work: Roofer

Family: 4 Children

Location: San Antonio, TX

Archetype: Manual labor

Limited tech skills

Poor English

Doesn't own smart phone

Bio

Hector is a roofer that works overtime and lives with many family members under one roof.

Hector do not carry a mobile device, and depends on elder children for computer related tasks. He generally prefers to go to benefits offices to apply for benefits.

Only recently he started using computer for status changes. Some times he calls 2-1-1 for assistance in filling application and speaks in Spanish.

Technology

Internet

Mobile

Social Network

Goals

- To learn English better
- To use computer without help from children
- To spend less time applying on line

Frustrations

- Benefits forms ask too many questions
- Spanish translation is not good enough on benefits site
- It takes forever to enter whole family members

Project Beyond work

Educational UX Posters

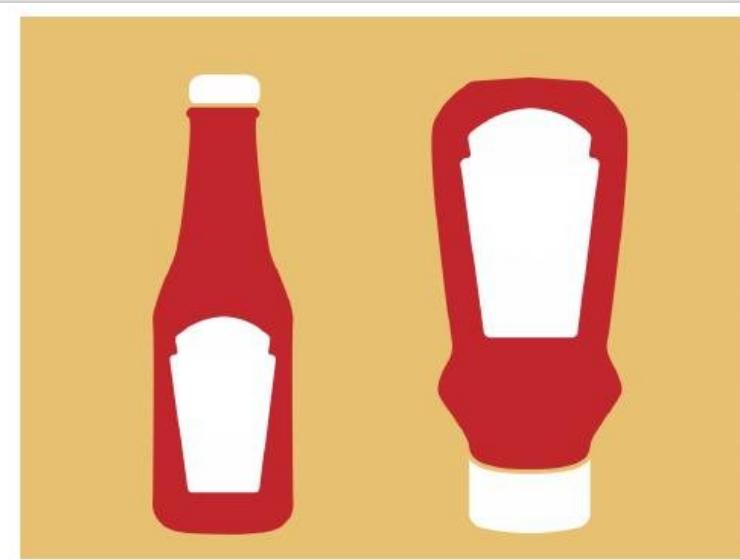

Business Goals

- Educate Dev team
- Peer review
- Share with UX community

- Educate product team on UX
- Explain feature creep
- Explain why usability matters

FLEXIBILITY vs. **USABILITY**

UI Vs. **UX**

USABILITY MATTERS
