TI Gangstalking Experience

The above pictures are from a Saturday pizza night. We always go pick up our pizza because the delivery people are paid to poison it with nose spray (phenylephrine). We've been made sick several times before. It was very hard to see while driving because it was damp and very foggy.. I have experienced coming home and someone has parked their car so the headlights are on my front door, or when I go shopping there is a vehicle sitting alone in the dark with its headlights on my car when I come out of the store. So when I saw a truck parked in the middle of the parking lot alone with its headlights on my car as I drove in, I knew they were my stalker. There is never a time when I go out I am not stalked, but I have never experienced what happened this night before. This experience was new.

My pizza wasn't ready yet so I sat down on a bench by the front window with my back to the parking lot. In a few minutes, I felt my scalp twitching and there was a painful spot on the back of my head all of a sudden that wasn't there before. I felt like someone hit me with a DEW or something. I turned around and the black truck was right in line with where I was sitting. My car camera picked up another truck that parked nearby and a man got out with something squarish in his hand. As I left the store with my pizza he was standing on the sidewalk nearby and another stalker crossed my path and got in my way at the instant I came out the door. I drove by the black truck as I left and the woman stuck her tongue out and I got the license number. I didn't know the other truck was involved at that time but it might have been. The man with something in his hand may have been on the sidewalk behind me when I was struck in the back of the head.

Gangstalking is serious. If you have implants and stalkers with smartphones turn on your implants, from the street, or by getting close to you in a store, or working with another stalker, you can be disabled or injured if they hit you in the head with a laser or microwave weapon. You can be made to eliminate in public or fall down. You don't want to act out or get angry, just quietly take in every bit of information from your surroundings. Stalkers mean to injure you, either physically or psychologically by just being there watching. Pretend you don't see them or interrupt their stalking by asking questions or making them look up. Take Pictures of all of

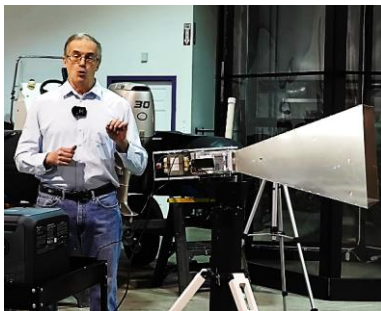

them. You don't usually see the same one twice but something may come up. They are told something negative and false about you and they are very capable of hurting you.-TI Edgewater, FL, January 2026

How Are You Being Watched?

From smart TV's that listen to your conversations, to smartphone apps that quietly monitor your habits, to public cameras, home assistants, and even your online searches, your private life may not be as private as you think..

WE USED MICROWAVES TO TAKE OUT DRONES!

<https://www.youtube.com/watch?v=V6XdcWToy2c>

If this guy can make a microwave weapon in his garage, the government has already made them and given them to your stalkers. IT MAY VERY WELL BE YOUR NEIGHBORS WHO ARE HARASSING YOU. They use people already in place.

1.2 Medical Inspection and Treatment by BAN

Medical Healthcare Using BAN can perform remote real-time medical diagnosis and therapy

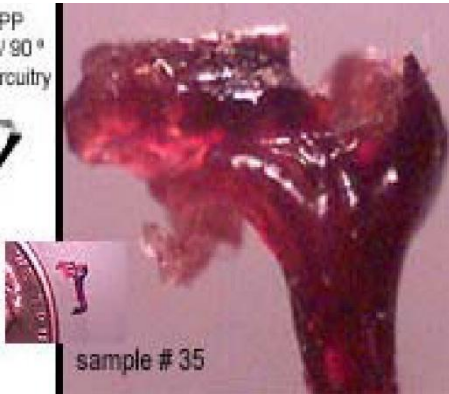

- To prevent pandemic against COVID-19 and medical care incident etc. in daily life.
 - > Remote sensing vital sign and monitoring symptoms
 - > Evidence based medicine for clinical and nursing actions
- To support safe and efficient medical care for clinical staffs and patients etc.
 - > Online diagnosis, PCR and other inspection
 - > Protect clinical staffs and care givers with network

The Wireless Body Area Network is slated for implantation for all the population by 2030. They plan to introduce it incrementally. This means that every human being will be monitored by a dozen or more doctors, stalkers and police. Privacy will not exist for anyone. The impetus for implementation is a pandemic scenario where the excuse will be that you are quarantined and need to be monitored by a doctor. This slide show will give you the picture.

THE COMMUNICATION SYSTEM HAS BEEN WEAPONIZED.

If you are being targeted in your own home, you may have an installation of electronics programmed just for you.

To understand how you are being targeted, you will need to educate yourself on how the communication system has been weaponized. Therefore, you must know how it works to begin with. Please watch this series beginning with this video series:

WHAT IS MORGELLONS?

Morgellons is an entomological weapon involving gene therapy and synthetic biology.

Many people are still suffering from it. People with Morgellons are Targeted Individuals. It is used as a punishment for some imagined wrong, such as you turned down an invitation to be part of a murder, or if you have witnessed police running a crime cartel. It is not and never has been delusional parasitosis. It is REAL PARASITOSIS of the tiniest of animals. In Florida, one they have genetically altered is "no-see-ums" (midges). There are actually parasitizing spiders, moths and mites. If they are not naturally parasitizing, animals have been genetically altered to create parasitizing animals like collembolas, springtails and Armadillidae (rolly pollies). There are also parasitic plants like cotton, magnolia flowers and something that looks like celery.

Calling TI's delusional is disinformation from the government to keep the disease going as long as possible and keep people in agony for longer. There will be no cure or treatment as long as the condition itself is denied scientific definition. Morgellons is a man-made condition. The government now controls medicine, doctors, nurses, pharmacies, labs and medics via

InfraGard (socialistic control with fear of crossing FBI). They are threatened with their livelihood which is invested with years of time and expense in their education. What would you do? They do what the gov tells them to do.

Many TI's have Morgellons along with all the rest of targeting-stalking, electronic harassment and implantation. There are things that can help a person be more comfortable. Please see our website for some pictures and articles. There is a link to the Wayback Machine which saved Skizit.biz which was a depository of studies of synthetic biology and specimens sent to CitizensAHT. There are a lot of things not on the website yet, so check back to see new things. <https://targetedhumans.org/morgellons>

Starting from the beginning of entomological warfare:

The Sting of Defeat: A Brief History of Insects in Warfare

By Ryan C. Gott, Ph.D. July 13, 2018

<https://entomologytoday.org/2018/07/13/sting-defeat-brief-history-insects-entomological-warfare/>

Entomological warfare (EW) has manifested through human history in three main forms: insects directly used as weapons, insects used to destroy crops, and insects used as vectors to inflict disease. More recently, though, insects have become sources of innovation for advanced military technology.

Insects as Disease Vectors

Mosquitoes and yellow fever, lice and typhus, fleas and plague: Such insects may be most infamous as vectors of debilitating diseases. From

[Napoleon's conquests](#) to the [American Civil War](#), battles and wars have been decided by these insect-initiated illnesses, whether accidentally or intentionally (such as the catapulting of [plague-ridden corpses](#) over city walls). Many countries have investigated the efficacy of insects and their associated diseases as biological weapons, including the United States, which has [tested insect-based tactics](#) on American citizens, notably in Operations [Drop Kick](#), Big Buzz, and Big Itch. But the case of Dr. Shiro Ishii is perhaps the most disturbing example of vectors being used for entomological evil.

ELECTRON BEAM FACILITIES

ATI's ExactBeam equipment has been delivered to 26 facilities worldwide and has logged over 1 million hours of operational time processing medical and food products in manufacturing and contract facilities. ExactBeam systems are designed to operate more than 7,000 hours per year to support 3-shift.

Is this a picture of a Reltron?

GROK: No, the system shown in the photo and described in the text is not a "Reltron."

The equipment is **ATI's ExactBeam**, an **electron beam (E-beam) irradiation system** designed for industrial applications like sterilizing medical devices and processing food products. It's a commercial accelerator setup installed in contract facilities worldwide, with high operational uptime (over 7,000 hours/year for 3-shift use) and proven reliability (1+ million hours logged across 26 sites). These are linear electron accelerators that generate a scanned beam of high-energy electrons to deliver precise doses for sterilization/modification without heat or chemicals.

A "reltron" (sometimes stylized as Reltron) refers to something entirely different:

- In electronics/semiconductor contexts, Reltron is a company that makes failure analysis and inspection tools (e.g., photon emission microscopes, NIR imaging systems) for chips and solar cells—not electron beam accelerators.
- **In physics/RF device literature, "reltron" appears in some papers as a type of high-power microwave oscillator/amplifier that uses a relativistic electron beam (hence "rel-tron") interacting with RF waves, typically for generating millimeter waves or other specialized pulsed RF applications. It's a research/experimental device, not a standard industrial sterilization tool.**

ELECTROMAGNETIC SYSTEMS

In the field of high-power microwaves, we produce tunable, narrowband Reltrons™, magnetron and ultra-wideband (UWB) short-pulse sources to operate over 7,000 hours, or 3 work shifts.

To the left is a photo shows multiple large, horizontal cylindrical accelerator units with extensive vacuum piping, high-voltage cabling, and conveyor-compatible setups—classic for industrial E-beam processing lines (similar to systems from providers like IBA Rhodotron, but this is ATI's ExactBeam variant). These are **not relativistic** in the sense of producing GeV-scale beams or microwave generation; they're MeV-range electron accelerators optimized for material processing. This is another picture on the same page at Fisica. It doesn't say what this particular piece of equipment is, but they do say they make Reltrons.

<https://targetedhumans.org/weapons>

The plane in the image is a **Boeing EA-18G Growler**, the U.S. Navy's primary electronic attack (jamming) aircraft, modified for electronic warfare rather than strike/fighter roles. The large, distinctive white pod circled on the wing/underwing station — this is the **AN/ALQ-249(V)1 Next Generation Jammer Mid-Band (NGJ-MB)** pod, an advanced electronic warfare jamming system developed by Raytheon (RTX). **The AN/ALQ-249(V)1 Next Generation Jammer Mid-Band (NGJ-MB) is not a Reltron-based system.**

<https://targetedhumans.org/weapons>

The AN/ALQ-249(V)1 Next Generation Jammer Mid-Band (NGJ-MB) is not a Reltron-based system.
