Appointments

Associate Professor (with tenure)

Depts. of Internal Medicine and Neuroscience

Investigator, Peter O'Donnell Jr. Brain Institute

Neuroscience Graduate Program

Molecular Metabolism & Metabolic Diseases Track

University of Texas Southwestern Medical Center, 2015.9-present

Education

Case Western Reserve University, Cleveland, OH, 2004-2010.

Ph.D., Dept. of Neurosciences, School of Medicine.

Pet-1 Is Required Across Different Stages of Life to Regulate Serotonergic Function.

Mentor: Evan S. Deneris, Ph.D.

Mentoring Statement

I have been mentoring high school, undergraduate, graduate students, and post-doctoral fellows for the past 15 years. I've been fortunate to train under two supportive, "hands-off" mentors—an approach I have adopted in my own lab. I believe in providing my trainees with the resources and space to explore independently, while offering guidance and support when needed. With that in mind, I'd like to share a few thoughts and expectations for prospective students and postdocs interested in joining our group.

For Graduate Students

The most important skill I hope students will develop during their Ph.D. training is critical thinking. This, more than any experimental technique, will have a lasting impact on their future careers and lives. I also encourage students to challenge themselves to learn new techniques and pursue original, curiosity-driven discoveries. Research is not easy—it demands hard work, perseverance, and sometimes, a bit of luck. But it's also a training ground for future challenges, and you'll have the full support of the lab behind you. Finally, students are expected to graduate on time—ideally within five years. A Ph.D. is just the first step in a long journey. Don't get stuck there.

For Postdoctoral Fellows

At the postdoc stage, I expect you to have the skills and knowledge to independently design and execute experiments. This phase of training should focus on developing the broader competencies required for independence. From the outset, I encourage postdocs to participate in grant writing, including drafting their own proposals. I also expect them to actively present their work at lab meetings, seminars, and conferences. Each year, my trainees attend national or international meetings to broaden their professional networks. In my view, postdoctoral training is a time to identify and define your unique research niche. I am committed to helping each postdoc build the necessary credentials (papers) and secure the resources (funding) to take that next step toward independence.

Recent trainee achievements

Career Development Award (2025), The American Heart Association

PDA Travel Award (2025), UT Southwestern Medical Center

Basic Science Award (2024), The Ninth Seldin Research Symposium, UT Southwestern Medical Center

Career Development Award (2024), The American Heart Association

Best Poster Presentation (2024), Gordon Research Conference, Maine, USA

Best Oral Presentation (2024), CADA Annual Meeting, Orlando, Florida, USA

Basic Science Award (2023), The Eighth Seldin Research Symposium, UT Southwestern Medical Center

PDA Travel Award (2023), UT Southwestern Medical Center

Postdoctoral Fellowship Award (2023), The American Heart Association

Scholarship Award (2022), Keystone Symposium, Banff, Canada

Best Oral Presentation (2022), CADA Annual Meeting, New Orleans, USA

Selected publications (Corresponding † and first author* ONLY)
