

CS 2000 Chemical Suit

Soft on the inside, tough on the outside—protection that breathes and performs.

CS 2550

25 pc/bag/carton box

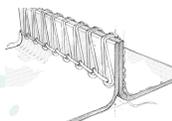

Made from high quality 55gsm Anti-Static Microporous fabric.

- Selective Permeability: A microporous "one-way" film uses pores millions of times smaller than water droplets to block liquids and hazardous dust while allowing sweat vapor to escape.
- Thermal Comfort: High MVTR (Moisture Vapor Transmission Rate) ratings ensure the fabric exhausts body heat and moisture, preventing heat stress without compromising the physical barrier.

Serged Seams:

- Features an interlocking stitch for high strength and flexibility, ideal for general protection against dry particulates and light splashes.

Design Features:

- Three-Piece Hood: Provides a better fit for the head and allows for a more effective seal when worn with respirator masks.
- Inset Sleeves: Ergonomically shaped to allow full overhead reach without pulling the garment or requiring dangerous thumb loops.
- Protective Storm Flap: Covers the zipper to prevent liquid and dust ingress through the front fastening.
- Fully Elasticated: hood, waist, cuffs, and ankles to ensure a secure and comfortable fit during movement.

InnoviSafe[™]

CS 2000 Chemical Suit

Soft on the inside, tough on the outside—protection that breathes and performs.

Key Applications

- Industrial & Manufacturing: paint spraying, fiberglass handling, boat building, and wind blade manufacturing where protection from aerosols and resins is critical.
- Hazardous Materials: asbestos and lead abatement, as well as handling hazardous dry particulates and light chemical splashes.
- Maintenance & Cleaning: General "dirty" jobs involving oil, grease, grime, and low-hazard emergency response or pressure washing.
- Healthcare & Labs: Suitable for pharmaceutical manufacturing and crime scene investigations (SOCO).
