

When Purpose Meets Urgency: Reflections on India's Green Skilling Report

By Vinayak Panse, Founder – *The Impact Careers / Careers with a Cause*

For over three decades, I've watched how careers are not just chosen – they're shaped.

And today, as I read the latest report, India risks underutilising demographic dividend as only 10% of youth receive green skilling_ [Report, ETGovernment](#), on India's green skilling landscape, one truth rings louder than ever:

We are standing at a historic intersection between *youth potential* and *national purpose*.

The report's finding is both sobering and catalytic –

Only 10% of India's youth have received any form of green or sustainability-focused skilling.

If this trend continues, we risk underutilising not just our demographic dividend, but our destiny.

The Call Behind the Numbers

These statistics are not about shortages; they're about signals. They tell us that our education and employment systems have not yet caught up with the realities of the century we live in – one defined by climate shifts, resource scarcity, and a global movement toward sustainable innovation.

But the real story is this: India's youth are ready. What they need is not more advice, but access – not just jobs, but purpose-aligned pathways.

Why We Are Building Careers with a Cause

The idea of *Careers with a Cause* platform was born out of a belief that **every career is a building block in the architecture of a better India.**

We are designing it for the very generation that this report speaks of – India's young citizens, aged 14 to 40 – who want their careers to matter, to last, and to leave something better behind.

Through the **Trilogy Framework (Awakening, Becoming, Impacting)** and the **Impact Score Engine**, we are building a bridge between *the world of aspiration* and *the world of measurable impact*.

Our youth don't need to wait for green skilling to reach them. We're bringing purpose, innovation, and sustainability to them – in classrooms, on dashboards, and through data.

The Future Is Not a Forecast – It's an Invitation

When a nation's youth rise with clarity of purpose, no index can measure the true scale of transformation.

This report reminds us that India's green transition isn't just a policy goal – it's a generational mission.

To every young person reading this:
You are not just part of the workforce.
You are an **Architect of India's Future**.

Let's ensure that by 2047, when India celebrates its centenary of independence,
we can look back and say:

We didn't wait for opportunity – we *architected* it.
