

Routine Operations

Sometimes I may need to go to the hospital  to have a 'Routine Operation'.

A Routine Operation is when a doctor  plans a time for me to go into hospital because they want to make life better for me, by working on a part of my body.

The doctors and nurses are fully trained and do Routine Operations for other people every single day. I will be very safe with them.

The doctors and nurses will make sure that I won't be in pain during my Routine Operation.

After my Routine Operation, I may need to take extra care of myself for a few days, I may need help  with certain jobs and I may need paracetamol.

A few days after my Routine Operation, I will feel better and I will feel the benefits that the Doctor told me about. 😊

I will be able to enjoy every day again! 🙌
