

# Toilet Hygiene

I am a man and I will usually stand up to have a wee but it might mean that the wee doesn't go exactly where I want it to, especially when I start to wee and when I finish.

When I use the toilet to have a wee, I MUST remember to

lift the seat up first .

If I don't lift the seat up I might get wee on it, which is very

unpleasant for the next person, who may need to sit down

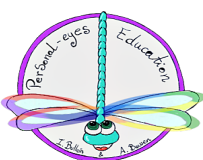

when they use the toilet. They will get a wet bottom and that will make

them very unhappy

and maybe even angry

If I do accidentally splash wee on the seat, the edge of the toilet or

on the floor, then I must remember to clean it up myself  and

NOT leave it for someone else. I can always ask a family member

or a support worker for help

if I am unsure how to do so.

If I remember to lift the seat up when I have a wee and clean the toilet if I do splash, it means I will keep it clean and safe for other people to use.

I MUST always flush the toilet after I finish using it.
