### 1. INTRODUCTION

### 1.1 General Project Overview

**1.2 Executive Summary**The Fort Banana project revolves around a participatory and sustainable growth model, focusing on staking programs with dividend distribution, a long-term yield approach, and playful activities such as Play-to-Earn. Through its two staking programs, Fort Banana rewards loyal holders and supports the ecosystem's economic stability.

### 1.3 Project Main Objectives

### 1.4 Core Values and Vision

# 1.5 Current Market Issues

### 1.6 Web3 and Tokenization Opportunities

The rise of Web3 and asset tokenization unlocks new possibilities to create decentralized, participatory financial ecosystems. Fort Banana relies on the gradual addition of utilities and RWA (Real World Assets) programs to increase the token's value and impact over time, actively involving its community at every step.

# 2. LEGAL NOTICE AND DISCLAIMER

### 2.1 Legal Warning

This document is provided for informational purposes only and does not constitute an offer or solicitation to buy or sell securities, financial instruments, or any investment product. The content of this document is not to be considered as financial, legal, tax, or other professional advice. Any investment decision related to the Fort Banana (\$BANAN) project is the sole responsibility of the user.

2.2 Risks Related to Crypto Assets
Investing in crypto assets carries a high level of risk, including the total or partial loss of capital. Cryptocurrency markets are volatile and subject to unpredictable fluctuations. Investors should be aware of regulatory, technological, economic,

# 2.3 Disclaimer of Liability

the use of the information in this document or participation in the project. No guarantees are made regarding the achievement of stated objectives or future performance of the project. The project is dynamic and subject to change

#### 3. PROJECT DESCRIPTION: FORT BANANA

# 3.1 Mission and Vision

Shiba Inu, Fort Banana rejects short-term meme culture and embraces sustainability, transparency, and projects like office community-first governance.

### 3.2 Competitive Advantages

Fort Banana offers a true **DAO governance system**, where the community votes on essential project decisions (allocations, staking programs, burns, features, etc.). Its **hybrid economic model** (utility + yield) is reinforced by dividend staking programs, a fair-launch tokenomics model, deep transparency (wallet lockers, public audits), and a standout brand that blends humor with serious Web3 innovation.

#### 3.3 Business Model

Fort Banana is built on an evolving ecosystem co-created with its community. The project captures value through:

• Smart transaction taxation (for redistribution, development, and burns)

• Two dividend-generating staking programs

• A Play-to-Earn game (airdrop model)

• A fully Web3-powered 50/50 lottery

• Bonus and partner programs

• Long-term expansion into Real World Assets (RWA)

3.4 Token Use Cases
The \$BANAN token fuels the entire ecosystem:
Payment method within games and lotteries
Voting power in DAO proposals
Yield distribution via staking
Airdrop and challenge rewards
Access to partner-based bonuses

- 3.5 Dividend Yield System
  Two core mechanisms power Fort Banana's passive yield:
  The primary staking pool, rewarding users via a portion of the tax collected on transactions.
  A secondary staking program, designed and voted by the community through DAO governance, with customizable parameters for future stages. Both systems promote long-term holding and project commitment.

# 3.6 Utility Token or Security Token?

\$BANAN is a **hybrid token**: primarily a utility token with broad ecosystem applications, but also featuring governance and dividend-like mechanisms that share similarities with security tokens. Token holders actively influence the project's evolution through DAO voting and benefit from yield-based staking, making \$BANAN both an **interactive and** revenue-sharing asset.

### 4. ISSUER INFORMATION

**4.1 Legal Name**Fort Banana is a community-based cryptocurrency project currently in development, with no registered legal entity at

4.2 Head Office Address

At this time, Fort Banana does not maintain a formal headquarters. The community will vote through the DAO on whether and when to establish a physical location, if necessary. This decentralized approach aligns with our

**4.3 Project History**Founded in 2025, Fort Banana emerged from the desire to innovate within the meme coin space by combining humor with serious Web3 utility and long-term value creation. The project is currently in its presale and development phase, building an ecosystem that includes a 50/50 lottery, two dividend staking programs, a Play-to-Earn game, and future RWA integrations.

# 4.4 Planned Legal Structure

The team intends to establish both an official company and a community-driven foundation. The foundation will be funded primarily through the 50/50 lottery system. All legal and structural developments will be initiated through community votes using the DAO.

### 4.5 Founders and Executives

Fort Banana was founded by **Patrick Benoît**, based in Quebec, Canada. As the lead initiator, Patrick is currently overseeing project management, fund coordination, and DAO vote facilitation. Additional developers and professionals are expected to join as the project scales.

### **4.6 Governance Structure**

The project operates under a **community governance model**, with all major decisions determined via **DAO voting**. Token holders participate directly in shaping the future of Fort Banana. Three trusted partners will soon be announced to assist in governance and validation, and their identities will be published on the official website and social platforms.

### 5. TOKEN CHARACTERISTICS OF FORT BANANA (\$BANAN)

**5.1 Name, Symbol, and Standards**Fort Banana token is an ERC-20 token operating on the Ethereum network. Its symbol is \$BANAN, with a total supply set at 555 trillion tokens.

#### 5.2 Network Used

### **5.3 Main Features and Utilities**

# 5.4 Audit and Security

**5.5 Contract and Pre-sale Access**The pre-sale smart contract will be accessible through our partner Pinksale. Official links and the dashboard will be available on our website, providing transparent and secure access to all pre-sale information.

### 6. Offer Structure and Pre-Sale

#### 6.1 Amount to Raise

The total amount to be raised during the pre-sale is set at 15 ETH (Ethereum), constituting our soft cap. This financial goal is calculated to support the initial development phases of the Fort Banana project, including technical deployment, initial marketing, and establishing the infrastructure necessary for an optimal launch.

# **6.2 Token Price per Phase**

### 6.3 Pre-Sale and Launch Schedule

The pre-sale period is scheduled from July 22 to July 28, 2025, allowing investors 7 days to participate in the Fair Launch. Following this phase, an official listing of the Fort Banana token is planned on the Uniswap platform on July 29, 2025, enabling liquidity and immediate token trading.

**6.4 Early Investor Discounts**In the interest of fairness and transparency, no discounts or bonuses will be offered to early investors. The Fair Launch nature of the project eliminates exclusive advantages so that every participant benefits from the same purchase conditions, thereby strengthening trust and process integrity.

6.5 Accepted Payment Methods
Payments for the pre-sale will be accepted exclusively in ETH (Ethereum), ensuring direct integration with our Web3

### 7. DISTRIBUTION AND TOKENOMICS

# 7.1 Total Supply Allocation

7.2 Vesting and Release Schedule
Only 1% of the tokens are subject to a vesting mechanism, spread over 260 weekly cycles (5 years total). This approach ensures long-term commitment from the team. Other allocations are immediately accessible at launch to encourage broad participation in DAO voting, lottery, and Play-to-Earn game. The game and lottery will be developed

### 7.3 Quarterly DAO Revaluation

Every three months, the Fort Banana community is invited to reevaluate the tokenomics structure through decentralized voting on our official partners' wallet signature platforms. This process ensures dynamic and transparent governance, allowing adjustments in allocation and priorities based on project needs and partner participation. Three potential partners are under consideration; the final choice will be community-approved.

**7.4 Allocation for Team, Community, Reserve, and Burns**The allocation policy ensures fair distribution among stakeholders: the team with strict vesting; the community at the core of governance and incentives (airdrops, contests); the reserve for development; and tokens burned to limit supply

# 7.5 Allocation Chart and Graphs

# 7.6 Burn Policy

### 8. USE OF FUND

### 8.1 Percentage Allocated to Each Domain

- 2% is automatically redistributed to holders through Staking and Dividend Program #1, rewarding community loyalty.
   1% is automatically allocated to liquidity. This process is programmed directly into the smart contract: 1% of every transaction is sent automatically to liquidity on Uniswap, without passing through Fort Banana's wallets, which directly increases liquidity and stabilizes the token's value.
   The remaining 2% is dedicated to project development. The community decides the exact distribution through DAO voting, including allocations for token burns, airdrops, contests, team bonuses, marketing, and acquisition of Real World Assets (RWA) to fund Staking Program #2.

### **8.2 Technological Development**

The following development priorities have been identified and will be validated through DAO voting:

- **Development and deployment of the 50-50 lottery**, a key pillar of the Fort Banana ecosystem. This feature is designed to generate recurring revenue to support further utility development.
- Creation of the Play-to-Earn game, inspired by airdrop mechanics, funded in part by the lottery and co-developed with the community.
- Establishment of the Fort Banana Foundation, supported financially by the 50-50 lottery, and operated

- Ongoing smart contract audits and robust security processes. Full public disclosure of audit results and all important technical information will be a core commitment of the project.
   Multi-chain deployment, facilitated through our official partner Chainlink, to ensure interoperability with other blockchain ecosystems over time.
   Integration and selection of official partners, including:
- - 7 partners for airdrops, quests, giveaways, and community contests.
    3 official partners for DAO vote management, using wallet signature authentication to ensure

Ultimately, the **community will play a central role** in financial development decisions: how revenues are used, what to invest in, how to design the second staking program, and which innovations or platforms to fund for long-term growth.

### 8.3 Acquisition of RWA (Real World Assets)

Fort Banana's RWA acquisition strategy is based on stability, transparency, and a long-term vision. While final investment decisions will always be made through **DAO community voting**, a strategic model is already being considered.

The plan is to invest in a **portfolio of 100 dividend-paying stocks**, exclusively from the **Canadian and U.S. stock markets**. Each selected stock must provide a **minimum annual dividend yield of 4% or higher**.

This approach mirrors a **community-powered ETF**:

- That 1% would be **equally divided across 100 different stocks**,

  Ensuring **broad diversification** and **reliable yield**, even in the event of underperformance from one or several stocks.

For **financial asset management**, Fort Banana has partnered with **Wealthsimple**, a regulated and trusted investment platform in Canada. Additional partners may be added or replaced based on community approval via DAO voting.

- A quarterly audit of all financial assets will be conducted,
  In parallel with the scheduled tokenomics reevaluation every three months by the DAO community.

### 8.4 Legal and Regulatory Compliance

Fort Banana follows a community-driven and structured approach when it comes to legal and regulatory matters. Every key legal or compliance decision will be **submitted to DAO community votes every three months**, ensuring a

### • Ongoing legal consultations

Quarterly financial audits

Every three months, full audits will be conducted and publicly shared with the community, disclosing all financial assets held and detailing investment performance.

KYC/AML compliance management
A dedicated section will handle regulatory obligations such as Know-Your-Customer (KYC) and Anti-Money
Laundering (AML) protocols, where applicable.

Quarterly regulatory reviews
 At the end of each quarter, a compliance evaluation will be initiated to analyze new or changing legal requirements. These will be reviewed and voted on by the community.

 Community communication channels
 All legal and compliance topics will be discussed and made transparent through dedicated sections on our official website, and through partner platforms supporting DAO voting via wallet signature.

 Recognition, security, and trust
 A transparent and evolving regulatory framework will strengthen project legitimacy, attract more investors, and ensure a safe and sustainable ecosystem.

# 8.5 Marketing

Marketing is a core pillar of the Fort Banana project. A major promotional campaign will be deployed **one week before the official launch of the presale**, aimed at attracting broad public interest and building a strong community from day

### **Key Marketing Strategies:**

Multi-platform launch campaign
 Promotion through social media channels (Twitter/X, Telegram, Discord, etc.) and partner platforms that specialize in airdrops, giveaways, and quest campaigns. These platforms are listed on our official website.

 Community-based and participatory marketing
 The launch of DAO votes will serve as an organic marketing tool, as user engagement will encourage broader participation and draw in more contributors who want to be part of the project's development.

 Marketing budget voted by the community
 A small percentage of the project's revenue will be allocated to marketing. The exact amount will be decided through DAO voting, allowing the community to collectively determine marketing priorities.

 Referral program during the presale
 A referral system will reward users with 5% of all investments made through their personal referral link. This

A referral system will reward users with 5% of all investments made through their personal referral link. This creates strong community engagement and incentivizes early supporters to help the project grow.
 Ambassador program launch
 Following the first listing, an ambassador program will be introduced for content creators, influencers, and community leaders. The program will be supported by a dedicated app that automatically tracks marketing performance and rewards ambassadors with bonuses and incentives.

Fort Banana's marketing strategy is **collaborative**, **transparent**, **and scalable**, with the goal of **maximizing the project's viral potential** while ensuring a consistent, credible, and engaging presence across all channels.

### 8.6 Liquidity

Liquidity management is a cornerstone of the **Fort Banana** project's long-term strategy.

Initial injection into Uniswap
 As soon as the presale ends, 55% of the raised funds will be immediately injected as liquidity on Uniswap, with no delays. This ensures a transparent and stable launch on the secondary market, starting July 29th, the official listing date.

 Liquidity locked for 5 years
 All liquidity added to Uniswap will be locked for five (5) years, demonstrating the project's strong commitment to the community and its long-term vision. This measure is intended to foster trust, security, and sustainability.

 Automatic liquidity increases

1% of every transaction is sent directly to Uniswap liquidity, bypassing any team-controlled wallets. This

process is **automated**, **immutable**, **and hardcoded** into the smart contract. It guarantees continuous growth of liquidity and contributes to the token's price stability.

In short, Fort Banana has implemented a **solid**, **locked**, **and scalable liquidity strategy**, fully transparent and publicly verifiable via **Etherscan**.

### 8.7 Financial Planning: Short, Mid and Long-Term

Fort Banana follows a structured and community-driven financial roadmap focused on quarterly DAO votes, sustainable liquidity growth, and transparent revenue distribution.

These metrics will be available through the official website, DAO governance partners, and quarterly transparency

### 9. GOVERNANCE AND DAO

### 9.1 – Partial DAO Governance Model

The Fort Banana project follows a progressive community-based governance model. During the initial launch phase, key decisions will be handled by the founding team to ensure proper structure and momentum. However, as the community grows, all critical decisions – including financial management, partnerships, tokenomics, and RWA acquisitions – will shift to a fully DAO-driven system. The team will hold no more voting power than any other holder, and will strictly implement the will of the community.

9.2 – Community Voting Mechanism
All \$BANAN holders will be able to vote through our official DAO partners (names to be inserted here: [], [], [\_\_\_\_]) using wallet signature verification.

Major decisions (fund distribution, financial audits, tokenomics adjustments) will be subject to quarterly votes. In addition, weekly – and sometimes daily – community votes will be held on various project aspects, including development priorities, token burns, marketing, airdrops, and more.

#### 9.3 - Token Holder Responsibilities

All token holders carry a direct responsibility in the project's growth and governance. They are encouraged to stay informed via the official website (in the "Vote DAO" section) and social media.

To promote participation, bonus rewards or incentives may be granted for voters on key proposals. Community involvement is essential for the legitimacy and strength of Fort Banana's DAO structure.

### 9.4 – Transparency and Periodic Reports

Fort Banana is committed to maintaining a high standard of transparency with its community. Periodic reports will be published and will include detailed information on:

- Revenues generated by the project

- Overall project performance
   The RWA (Real World Assets) portfolio and its yields
- Full summaries of DAO community votes
- Results of airdrop, giveaway, quest, and contest campaigns
- Details and descriptions of any new partnerships

These reports will be released every three months and made available for public access on the official Fort Banana website, on partner platforms, and across our social media channels.

All DAO vote outcomes, including decisions and their implementation, will also be published through these

channels to ensure fully transparent and community-driven governance.

### 10. Regulatory Compliance

# 10.1 International Legal Framework

Fort Banana is an international project designed to operate as a decentralized and community-driven ecosystem. The potential establishment of a legal entity and official registration will be determined by the community through the DAO voting mechanism. No specific regional registration is required at this time.

# 10.2 KYC, AML and CFT

No mandatory KYC (Know Your Customer) procedures are required for investors. Interactions with the project are secured through electronic signatures using blockchain-compatible wallets, ensuring safe and transparent authentication. International standards for anti-money laundering (AML) and combating the financing of terrorism (CFT) will be upheld through community governance and selected partners.

### 10.3 Token Status

The Fort Banana token is a hybrid combining utility and security features, providing governance functionalities via a DAO mechanism while enabling ecosystem use cases (staking, dividends, games, lottery). The final classification of the token as a security or utility token will depend on applicable laws and will be monitored in

### 10.4 Registration, Exemptions, and Legal Filings

ial registration, regulatory exemption requests, or legal filings will be subject to community decisions through DAO votes. The project emphasizes transparency and compliance with current regulations while maintaining decentralized and participative governance.

### 10.5 Official Legal Partners

The selection and onboarding of legal partners specialized in cryptocurrencies, blockchain, and financial

regulations will be conducted according to community decisions. These partners will ensure ongoing project compliance and support its growth within a secure legal framework.

# 11. TECHNICAL INFRASTRUCTURE

The Fort Banana project integrates a decentralized oracle system, in partnership with Chainlink, to ensure the reliability and security of external data used in the project's mechanisms. This integration enables seamless connectivity between the blockchain and off-chain data, as well as multi-blockchain deployment.

### 11.2 Compatible Wallets

Fort Banana is compatible with the main Web3 wallets on the market, including MetaMask, Trust Wallet, Coinbase Wallet, and Ledger, providing great flexibility for user access and interaction.

# 11.3 Web3 Security and User Dashboard

Security is a top priority. We implement regular audits, multisignature mechanisms, and continuous monitoring. The user-friendly dashboard will allow holders to easily access staking information, dividends, and community votes through the DAO.

#### **11.4 Smart Contract Audit**

begins, the smart contract will undergo a comprehensive audit by independent experts Periodic post-launch audits will also be conducted to ensure transparency and security, with reports published for the community.

### **11.5 Security Partners**

Fort Banana collaborates with several specialized blockchain security partners who will contribute to audits, network monitoring, and regulatory compliance. Names and details will be announced soon, in collaboration with the community through the DAO voting system.

### 12. FINANCIAL INFORMATION

# 12.1 Financial Status

At this preliminary stage, before the pre-sale and official launch, no complete financial statement is available. Project financial information will be regularly updated and publicly disclosed weekly via our website and social media channels. Additionally, independent and transparent financial audits will be conducted every three months to ensure compliance and reliability of the data.

### 12.2 Profitability Forecast

The medium-term financial objective is to reach a transaction volume of \$300 million per week within six months after launch. Profitability will depend directly on the trading volume following listing on decentralized platforms. It is important to note that in the cryptocurrency environment, financial forecasts carry a high degree of uncertainty due to market volatility and inherent risks in digital assets.

### 12.3 Fee and Commission Structure

The project applies a standard 5% tax on each transaction, divided into three parts: 2% redistributed to holders as dividends and staking rewards, 1% automatically injected into liquidity on Uniswap, and 2% allocated to development, marketing, and other project activities. Transaction fees related to staking and withdrawals correspond solely to Ethereum blockchain fees and are independent of the project. The fee structure may be adjusted by the community via the DAO voting mechanism.

### 13. UNDERLYING ASSET (RWA)

### 13.1 Target Lists of Canadian and American Stock Assets

Fort Banana primarily targets Canadian and American stocks with high dividend yields exceeding 4% annually. Only stocks with a market capitalization of approximately 1 billion dollars or more are considered. This strategy supports Stacking Program No. 2, ensuring stable and regular income generation for the community.

### 13.2 Selection Criteria

Assets are selected according to a rigorous qualitative and quantitative framework. The fundamental criterion is a minimum annual dividend yield of 4%. Only dividend-paying stocks are included to ensure steady revenue generation. Market capitalization also serves as a financial stability filter, with a threshold set at approximately 1 billion dollars

#### 13.3 Asset Management, Brokers, Custodians, etc.

Asset management will be handled directly by the Fort Banana team, while secure custody of the assets will be entrusted to our partner Wealthsimple. The latter acts solely as a secure storage platform. Transparency will be maintained with the community through weekly reports on held assets and independent financial audits conducted every three months.

# 13.4 Allocation and Rebalancing Strategy

Asset allocation and rebalancing decisions will be subject to a community vote every three months, ensuring democratic and transparent governance. In case of emergencies, such as significant asset failure, rebalancing may be conducted outside the regular schedule. The community will play a key role in decisions regarding allocation, rebalancing, dividend distribution, and the choice of financial partners.

#### 14 - Partners and Teams

### **14.1 Founding Teams**

Fort Banana is a community-driven project led by Patrick Benoît, founder and principal manager. The founding team plans to expand by hiring qualified developers and professionals to support project growth.

### 14.2 Legal, Financial, and Technical Partners

Several strategic partners in legal, financial, and technical domains will be selected in collaboration with the community through a DAO voting mechanism. These partners will be disclosed and added to the White Paper once decisions are finalized.

# 14.3 Audit and Compliance Firm

The firm responsible for regular financial audits and regulatory compliance is currently being selected. This partner will be announced shortly to ensure full transparency. Financial audits will be conducted quarterly, and results communicated to the community.

#### 14.4 Communication Channels

The community will be able to follow project developments and receive official information through multiple channels: Fort Banana's official website, email newsletter, and the project's official social media platforms.

### 15 – Project Roadmap

### 15.1 Objectives 2025 to 2027

The Fort Banana project aims to grow closely with its community. Key goals include reaching at least 20,000 holders within the first year of launch. The project also plans to roll out major features like the 50-50 Lottery, a Play-to-Earn game (AirDrop-style), and the DAO voting mechanism. The project will actively involve community suggestions and innovations in shaping the ecosystem.

### 15.2 Regulatory Milestones

Various regulatory aspects, legal registration, and compliance procedures will be submitted to the community for decision-making through the DAO mechanism. This system allows for a collective approach in determining whether to register entities, seek exemptions, or adopt particular compliance models.

### 15.3 Technological and International Deployments

Fort Banana is planning a multi-blockchain deployment through an official partnership with Chainlink. Key development priorities include the 50-50 Lottery and Play-to-Earn game, both developed collaboratively with the community. These launches will target several international markets, expanding progressively based on feedback and partnerships.

### **15.4 Past and Upcoming Milestones**

Several important milestones have already been reached: creation of the smart contract with staking and automatic dividend distribution, launch of the official website, and initial partnerships for AirDrops and DAO vote management. The community has reached around 10,000 members, with activity expected to rise post pre-sale. Future milestones include finalizing partnerships, launching the pre-sale, deploying the 50-50 Lottery, the Play-to-Earn game, and expanding community-led governance.

### 16 - Conversion or Compensation Terms

#### 16.1 - Withdrawal, Conversion, and RWA

Holders of \$BANAN will not be able to directly convert their tokens into real-world assets (RWA). Instead, the Fort Banana team will manage a portfolio of dividend-paying stocks to generate passive income. These earnings will be redistributed to users through Staking Program #2.

This program allows users who stake their Fort Banana tokens to receive dividends in USDT, and occasionally in ETH. These distributions will not be automatic and will occur at a frequency determined by community DAO votes—monthly, quarterly, or annually.

A manual claim system will be available through our official partner. \$BANAN tokens cannot be exchanged directly for RWA.

#### 16.2 - Dividend Distribution

Staking Program #1 automatically redistributes 2% of every transaction fee in \$BANAN tokens to holders.

Staking Program #2 is funded by the passive income from the RWA (dividend stock) portfolio managed by the project. These dividends will be distributed exclusively in USDT, sometimes in ETH, but never in \$BANAN.

To receive these dividends, users must actively stake their Fort Banana tokens. The dividends will be claimed manually through a partner portal, and distribution frequency will be set by community DAO votes.

#### 16.3 - DEX and CEX Strategy

Following the initial launch on Uniswap, Fort Banana actively plans to expand onto additional decentralized exchanges (DEX) and several centralized exchanges (CEX).

Uniswap liquidity will be enhanced automatically through the 1% transaction tax, which is injected directly into the liquidity pool via the smart contract. In addition, part of the 2% allocated to the project will fund liquidity for future exchange listings.

Targeted CEX listings currently include: MEXC, BitMart, Gate.io, and OKX. Additional platforms will be selected based on community DAO votes.

Initial listing fees will be covered by the project's revenues. Fort Banana will also explore free listing opportunities with reliable and secure partners

A separate strategy will be applied to major exchanges (e.g., Crypto.com, Coinbase), which require higher standards in transparency, compliance, and trading volume.

#### 17 – Additional Information

### 17.1 - FAQ

A comprehensive Frequently Asked Questions (FAQ) section is available on our official website, located both on the White Paper page and the Fort Banana Coin official page. This FAQ currently includes 24 detailed Q&A entries, covering major topics such as staking programs, burn strategy, DAO voting system, liquidity, partnerships, financial targets, and more.

The FAQ is updated regularly based on community feedback, technical progress, and new ecosystem initiatives.

#### 17.2 - Financial and Crypto Glossary

A detailed glossary of financial and cryptocurrency terminology is included in our White Paper. This section aims to clarify key concepts for both beginners and experienced investors.

Terms such as DAO, DEX, CEX, RWA, Staking, Burn, APR, Liquidity Pool, and Tokenomics are all explained in plain language. This glossary ensures that everyone can fully understand the Fort Banana ecosystem and its technical and economic framework.

### 17.3 – Contacting the Team

The Fort Banana team can be reached through multiple official channels:

- Contact form available on our official website
  Official email address for general, technical, and business inquiries

### • Newsletter subscription for regular project updates

All official links are listed in the "Contact" section of our website and promoted via community platforms.

### 17.4 - Tax and Legal Disclaimer

Fort Banana reminds all users that cryptocurrencies are highly volatile assets, and participation in the project must be done with full awareness of the financial risks involved.

Holders of \$BANANA are responsible for their own tax reporting and compliance, depending on the jurisdiction in which they reside. Fort Banana does not provide legal, tax, or accounting advice.

A legal notice will be added once the community votes to approve an official legal partner for compliance and regulatory oversight. Until then, all decisions related to taxes, asset management, and legal governance will be subject to the DAO voting mechanism.

### 18 - Official Appendix

#### 18.1 - Technical White Paper

A dedicated technical white paper will soon be available, detailing the full technical architecture of the project. This includes smart contract design, automated distribution mechanisms, Web3 integrations, and technological choices (e.g., ERC-20 standard, Chainlink integration, etc.). This document is currently being finalized and will be made publicly available via the official website.

#### 18.2 - Full Smart Contract Audit

A comprehensive smart contract audit will be conducted by a certified blockchain security firm. The audit partner is currently being selected by the team, in collaboration with the community. The audit aims to ensure the integrity, security, and transparency of the code and will be publicly published in the appendix once completed.

# 18.3 - Legal Opinion

An independent legal opinion will be included once the official legal partner is voted and approved by the community through the DAO mechanism. This opinion will define the token's legal classification, ensure international compliance, and recommend a suitable legal structure for the project.

#### 18.4 - Financial Statements

As previously mentioned, there are currently no initial financial statements available, since the project is still in the pre-launch and presale phase. However, regular financial reports and quarterly audits will be published to ensure full transparency and accountability to the community.

### 18.5 – Compliance Document and KYC Form

No KYC (Know Your Customer) procedure is required for users or investors at this time. However, a global compliance document will be created and made available to the public. This document will outline the project's standards on transparency, verification, and governance. It will evolve based on DAO votes and any future international regulatory obligations.

# 19 - Crypto-Financial Glossary

#### 1. Airdrop

Free distribution of tokens to users, often used to reward loyalty or promote a project.

#### AMA (Ask Me Anything)

Interactive session (often live) where the project team answers community questions.

#### 3. APR (Annual Percentage Rate)

Annual interest rate applied to a staking or investment strategy.

#### 4. APY (Annual Percentage Yield)

Compound annual yield including interest-on-interest returns.

#### 5. Blockchain

A decentralized, immutable ledger that records all transactions on a network.

#### 6 Burn

Voluntary destruction of tokens to reduce total supply, often to increase scarcity

### 7. CEX (Centralized Exchange)

A crypto exchange platform managed by a central entity (e.g., Binance, Coinbase).

### 8. DEX (Decentralized Exchange)

An exchange that operates without a central authority (e.g., Uniswap, PancakeSwap).

# 9. DAO (Decentralized Autonomous Organization)

A community-managed organization governed by token-based voting. No central authority.

#### 10. DApp (Decentralized Application)

Applications built on the blockchain that operate in a decentralized manner (e.g., games, DeFi tools).

#### 11. DeFi (Decentralized Finance

Financial services and tools built without intermediaries, based on blockchain technology

#### 12. DYOR (Do Your Own Research)

Encouragement for each investor to research thoroughly before investing.

#### 13. ERC-20

oken standard used on the Ethereum blockchain. Most tokens follow this format

#### 14. Farming / Yield Farming

Investment strategy aiming to maximize returns by depositing tokens into DeFi protocols

#### 15. FOMO (Fear Of Missing Out)

Anxious feeling that can lead to impulsive buying due to fear of missing gains

#### 6. FUD (Fear, Uncertainty, Doubt)

Negative sentiment or misinformation spread to manipulate prices or sow doubt.

#### 17. Gas Fees

Transaction fees paid to miners or validators to process transactions on a blockchain.

### 18. Governance Token

Token that grants voting power in a governance system (typically within a DAO).

#### 19. KYC (Know Your Customer)

ldentity verification process required by financial regulations for compliance.

#### 20. LP Token (Liquidity Provider Token)

Tokens received in exchange for depositing assets into a liquidity pool (mostly in DEXs).

#### 21. Market Cap (Market Capitalization)

Total value of a token (unit price × circulating supply).

### 22. NFT (Non-Fungible Token)

Unique token representing a digital asset (art. in-game items, tickets, etc.).

#### 23. Private Key

Secret code that grants access and control over crypto assets. Must remain confidential.

#### 24. Public Key

Blockchain address used to receive funds publicly

#### 25. RWA (Real World Assets)

Real-world assets tokenized on the blockchain (e.g., stocks, real estate)

### 26. SAFU (Secure Asset Fund for Users)

Security fund or protocol principle to protect users (term popularized by Binance).

#### 27. Smart Contract

Self-executing contract coded on a blockchain. Operates without intermediaries.

#### 28. Staking

Locking tokens to earn rewards or help secure the network

#### 29. Tokenomics

Economic structure of a token: supply, allocation, vesting, use case, etc

#### 30. TVL (Total Value Locked)

Total value locked in a DeFi protocol (usually via staking or liquidity provision)

### 20 - A Word to the Community

### Let's build something strong, reliable, and meaningful - together

Fort Banana is more than just a crypto project. It's a collective adventure driven by transparency, collaboration, and community empowerment. We firmly believe that every talent matters – whether you're a developer, designer, content creator, marketing expert, or simply a blockchain enthusiast.

Your involvement can truly shape our future. Join us in decision-making through our DAO voting system, share your ideas, participate in votes, or actively help us grow and gain exposure.

Every voice matters. Every contribution counts. Together, let's build a secure, sustainable, and community-driven project with global impact.

### 21 – A Word of Thanks

### Thank you to everyone who believes in Fort Banana

We extend our sincere thanks to everyone showing interest in the Fort Banana project. Whether you are an investor, crypto enthusiast, influencer, YouTuber, promoter, content creator, business partner, blockchain or Web3 expert — your attention, support, and involvement are the true engine of our growth.

Every interaction, every share, every message of encouragement has a real and lasting impact. You are helping shape a bold, transparent, and forward-thinking ecosystem.

Thank you for believing in something different. Thank you for helping us build a community-driven model that's innovative, stable, and rewarding for all. Fort Banana would not exist without you — and together, we are writing the future.

NOTE: Before concluding this White Paper, it is important to emphasize that Fort Banana is a continuously evolving project currently in an active development phase. The information presented here reflects our current vision, planning, and goals. However, certain aspects—including partnerships, audits, technological features, as well as the specific governance and distribution terms—are subject to change over time, based on community decisions and market conditions. We encourage every investor and community member to stay informed and engaged, as flexibility and transparency are central to our collective approach. This White Paper will be periodically updated to accurately reflect the progress of the Fort Banana project.

It is crucial to remind that investing in cryptocurrencies involves inherent risks. The volatility of crypto markets can cause significant and rapid fluctuations in the value of Fort Banana tokens. Additionally, external factors such as global inflation, government regulations, and technological developments may also affect the project's value and liquidity. Investors should understand that despite ongoing efforts to ensure security and stability, past performance does not guarantee future results. We recommend a cautious approach and diversification of investments while staying informed about project developments and the overall market.
