

Tasty, ready, fresh.
Always.

INDUSTRY

INDUSTRIAL SUPPLIES

Thanks to the Research & Development team and to extremely flexible production lines, Orogel can make tailor-made products that are customized according to each customer's requirements and follow a shared procedure: first a new original idea, then the lab test, the making of a pilot product batch, and finally production.

» This is why Orogel is the partner supplier chosen by leading Italian and foreign companies, as it offers very high-quality and extremely competitive products and services, such as grilled vegetables, battered products, herbs and seasonings or semi-dried products.

THE SUPPLY CHAIN: FROM THE FIELD TO THE TABLE

Before getting into the hands of chefs, Orogel products are monitored step-by-step. Product traceability is core to every single stage of processing:

- » **The raw materials** are grown by our member farmers in the most suitable soils and selecting the best seeds to ensure high level quality standards.
- » **The processing plants** are cutting-edge and are spatially close to the farms to guarantee that the vegetables are deep frozen only few hours after harvesting.
- » **Quality controls** are carried out all along the production chain and are supported by very thorough lab tests.

VEGETABLES

Our vegetables are **processed within just a few hours of harvesting**, and after thorough washing, they are blanched: this is an essential operation that preserves all their flavour and organoleptic properties.

VEGETABLES *grilled*

The sweetest and tastiest vegetables are grilled in **high-temperature ovens** (over 250°C/482°F) where they are transported on special metal belts. This is how the characteristic aroma and grill marks remain on the surface.

VEGETABLES *herbs*

The most fragrant herbs are processed with a patented system: by oiling the surface, **the herb leaves are perfectly separated**, and the final product is more homogeneous.

CEREALS *and* LEGUMES

Legumes and cereals are increasingly used in people's diets for their **high content in vegetable proteins**. Thanks to a technological production line with a **steam cooking system**, it is possible to make products with **perfect consistencies** and requiring **short preparation times**.
