

(FAQ) Frequently asked questions V1.7

<https://www.OPPO-JB.com>

PLEASE READ EVERYTHING CAREFULLY BEFORE YOU BUY OUR FIRMWARE!

Q: Does your jailbreak firmware work with the latest official (stock) firmware installed on my player?

A: Yes, our jailbreak works with **any firmware** version installed, including the latest version.

Q: How does the jailbreak work, do I need to open my player?

A1: For **Oppo UDP** and **Cambridge Audio CXUHD** running on **stock firmware** you **don't need to open your player** to install our firmware, the jailbreak firmware can **easily** be installed by **USB-update** (=Easy USB installation method).

A2: For **Oppo UDP / Cambridge Audio CXUHD** models already **running on a costum/jailbreak firmware** you'll either first need to **re-install stock firmware** to use our Easy USB installation method **OR (if that's not possible)** you'll have to open your player and flash our firmware using an **USB-TTL serial interface** connected from your computer to the player mainboard's flash port (=USB-TTL installation method).

A3: For all **Oppo BDP** models the **Easy USB installation method is not available** for now, so you'll have to **open your player** and flash our firmware using an **USB-TTL serial interface** connected from your computer to the player mainboard's flash port (=USB-TTL installation method).

IMPORTANT NOTE: If you are forced to use our **USB-TTL installation method**, for **BDP-105(D)** and **UDP-205** models **additionally to opening the housing**, the **audioboards** inside the housing **need to be removed** to get access to the firmware flash port on the player's mainboard. **If you're unsure about how to do it, better stay on stock firmware or have the USB-TTL jailbreak done by a professional.**

Q: For USB-TTL method only: Which USB-TTL serial interface/cables do I need to buy and where? Are these items expensive?

A: We will provide **Amazon links** to the interface and adapter cables needed for the USB-TTL jailbreak. These parts are **not** expensive:
Interface ~ € 8/ \$ 11 **Cables:** ~ € 10/ \$ 8

Q: For USB-TTL method only: Do I lose any warranty when I open my player?

A: No, **you don't lose any warranty** as there is **no sealing** of the player's housing. As long as you don't damage any hardware inside **it's not apparent if the player was opened or not.**

Q: For USB-TTL method only: I'm not technically savvy and afraid to open my player, isn't it very difficult?

A: No and Yes (depends on your skills!) The USB-TTL jailbreak procedure itself is rather **fast** (about 20 minutes) and **pretty easy** for **BDP-103(D)** and **UDP-203/CXUHD** models. **However**, for **BDP-105(D)** and **UDP-205** models **you need more time** (1 hour+) and **you need to be very careful** when **removing the audioboards and connectors inside** before the USB-TTL jailbreak procedure, also afterwards during reinstallation. **Anyway, if you wish we can help you step-by-step with the whole procedure over Skype for free!**

Q: For USB-TTL method only: Which hard- & software (computer/operating System) do I need?

A: You need a computer with **Windows 7 or 10** to flash our firmware, if you're an Apple MacOS user – for example - Parallels Desktop with a virtual Windows installation will work also.

Q: If there's an official firmware update available, how long does it take for the updated jailbreak firmware to be released and how can I get it?

A: Usually it takes **8-10 weeks** after the release of the new official firmware for the jailbreak firmware to be released.

As a previous customer you will receive **every updated jailbreak firmware from us for free** as soon as it its available **automatically delivered to your E-Mail address.**

Q: Can I go back to stock firmware anytime?

A: Yes, you can go back to stock firmware with the **USB-TTL method**, we can provide detailed instructions about that. With the **Easy USB jailbreak** installed on your player you **just need to overwrite your jailbreak firmware** with the **stock firmware**, simply as you would update your official firmware.

Q: Are self-made/self-authored SACD-R discs supported (for example made with Philips SuperAuthor)?

A: No, only 1:1 copies/rips of original SACD-discs are officially supported by our firmware.

Q: Does your jailbreak firmware support "AutoScript" for mounting network shares via USB drive?

A: Yes, our latest jailbreak firmware versions for **UDP & CXUHD** players support script executions!

If you have any more questions, don't hesitate to contact us!
