

Workshop on 16th of November 2023, 16:30, EUREF Campus Berlin

“Safe and Trusted Travel in DRT, Micro-mobility, Taxi and Hire Sector”

IMPACTS, supported by EIT Urban Mobility, developed a socio-technical tool that is able to connect (i) passengers of mobility services in proximity off- and online and (ii) allows users to report issues in the urban environment to the respective mobility provider. The innovation embraces the bottom-up dimension by enabling each passenger-user to establish and organize in an ad-hoc community of support while in mobility. Moreover, the collective nature of the innovation enables mobility providers to receive valuable user data and feedback in an aggregated form, respecting privacy.

So far, we demonstrated the innovations’ readiness in the public transportation system of two diverse real-world contexts, that is the City of Dugopolje located in the Split metropolitan area of Croatia as well as in the megacity of Istanbul. Next up, we aim to gain an understanding which value proportions the socio-technical solution can offer for other mobility services.

For this we are approaching you, stakeholders in the field of Transport on demand, Taxi and ride-hire industries as well as Micromobility to comment on relevant need for IT solutions that are capable of increasing your customers’ safety perception, community experiences and trust. During the 90 minutes workshop we would like to:

- discuss the entrepreneurial significance of your customer's sense of safety and community when using various mobility services.
- introduce you to the WizGo app, the output of the EIT-funded IMPACTS project.
- discuss which value proportions socio-technical solutions can offer for various mobility services.

We hope to have you on board, so fill the registration page [HERE](#). No need to say, please contact us with any doubt or issue:
