

ORILLA

The Future of Intelligent Systems

PRODUCTS

OUR MISSION

Orilla's mission is to redefine how enterprises create value from data by delivering AI infrastructure that makes intelligence operational, scalable, and transformative.

We bridge the gap between people, data, and machines to enable smarter, safer, and more sustainable industrial operations.

OUR FOCUS

01

Fleet Management. Simplify deployment, monitoring, and maintenance across your entire device fleet with secure, centralized control and real-time visibility.

02

Data Engineering. Turn fragmented industrial data into AI-ready intelligence through automated capture, cleansing, and contextualization.

03

Edge Management. Deploy, orchestrate, and monitor containerized applications at the edge with cloud-like flexibility, even in resource-constrained environments.

04

Edge AI. Run optimized AI models where data is generated—enabling real-time insights, safer operations, and smarter performance.

EDGE MANAGEMENT

Our comprehensive platform provides the tools and infrastructure you need to deploy, manage, and scale AI applications at the edge with unprecedented efficiency, security, and control.

01

Centralized management and monitoring of distributed edge AI deployments on-premise or cloud.

02

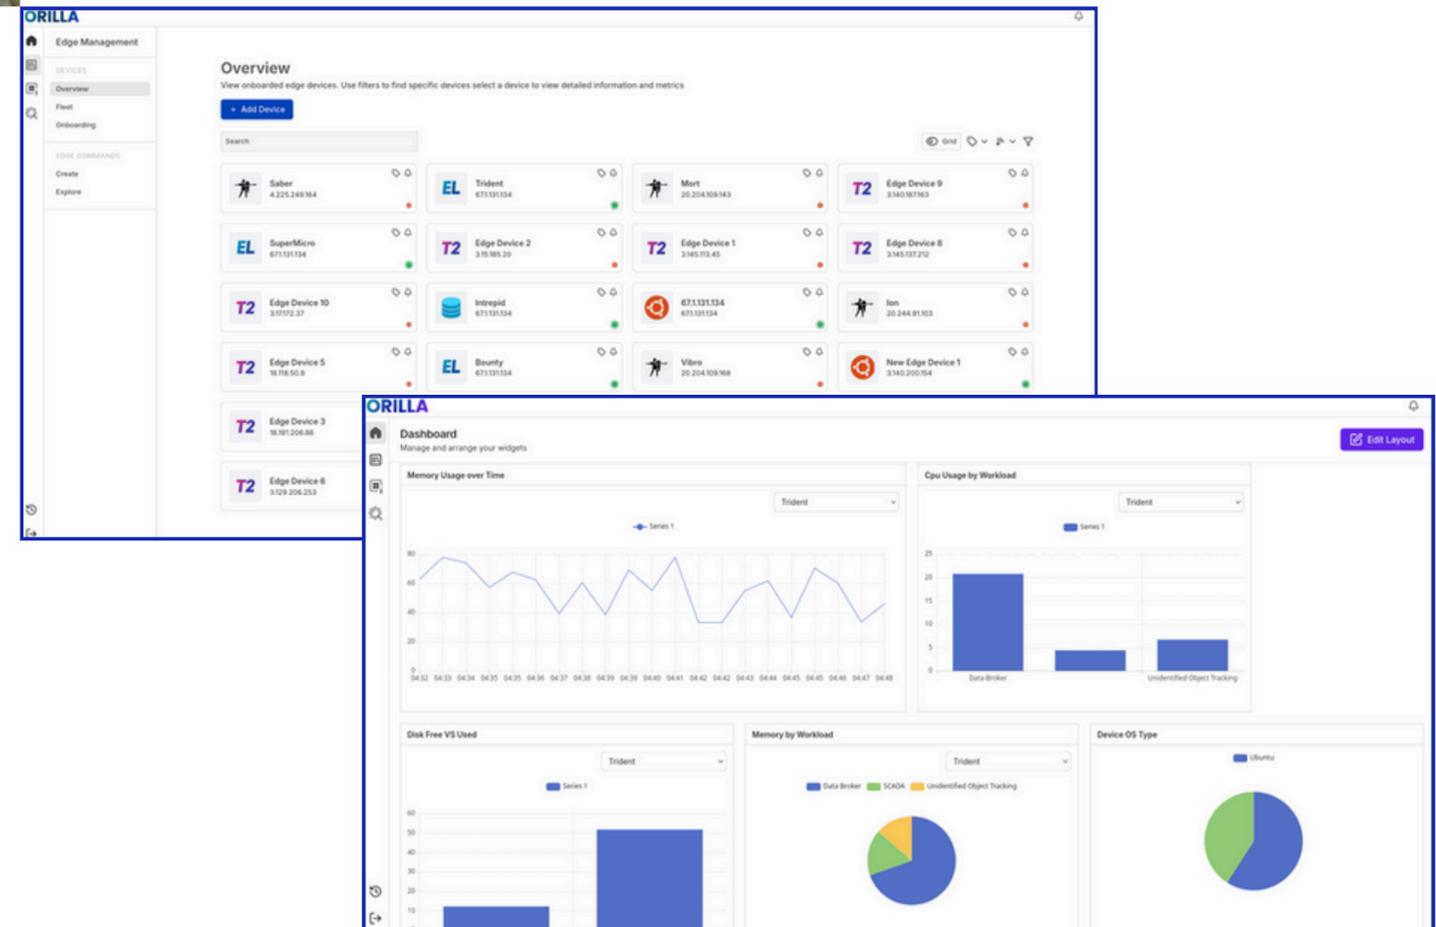

Point-and-click to distribute and optimize edge AI workloads across your enterprise.

03

Create, control and monitor device fleets easily. Collect and process telemetry to monitor fleet and device health.

04

Seamless integration with your existing technology from hardware to software.

DATA BRIDGES

01

Bridge the gap between data generation and utilization, enabling organizations to unlock real-time insights and power AI workloads

02

Contextualize OT data at the source, transform raw signals into AI-ready data sets to use on premise for automation or for AI analytics in the cloud.

03

Intelligently balance where data goes. Automatically route contextualized data to the correct AI workloads orchestrated by the platform.

04

Control data frequency and supports thousands of devices with reliable MQTT-based communication. Connect seamlessly with data brokers and IoT gateways.

INDUSTRIAL EDGE AI WORKLOADS

Orilla's AI workloads deliver real-time insights directly where data is created, helping organizations optimize performance, enhance safety, and maintain a decisive competitive edge. Each model is purpose-built and optimized for its specific environment, ensuring high accuracy, reliability, and scalability across even the most demanding industrial applications.

01

Predictive Maintenance. AI-driven monitoring that detects anomalies early, schedules service at the right time, and prevents unplanned downtime.

02

Safety & Security. Advanced computer vision and behavioral analytics for workplace safety monitoring and perimeter security, and real-time threat detection.

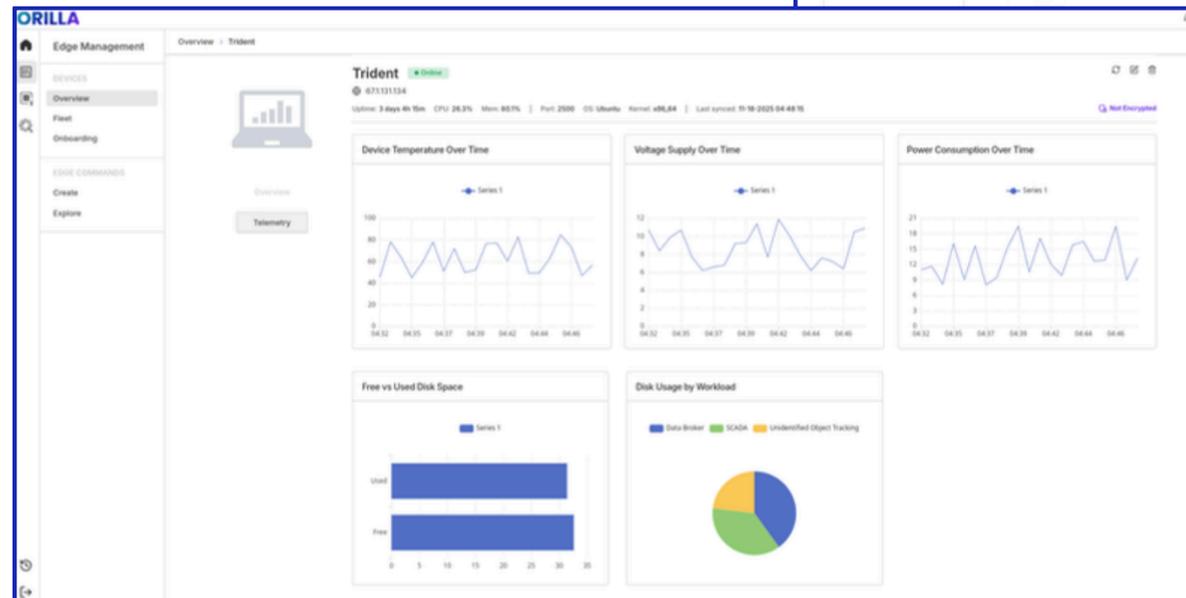

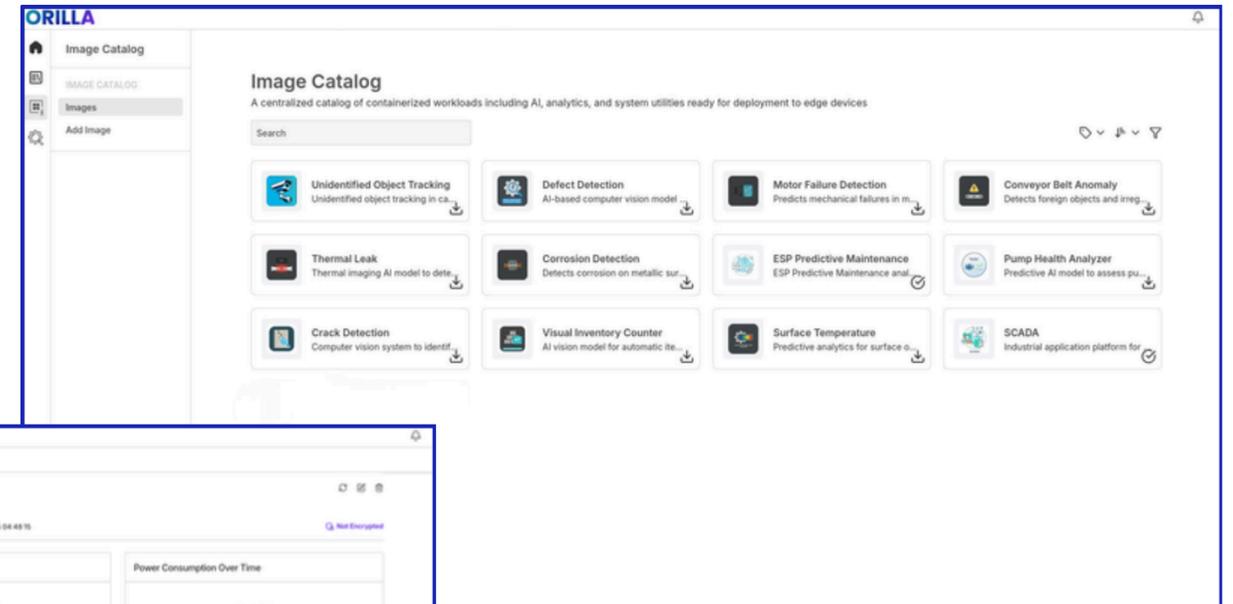

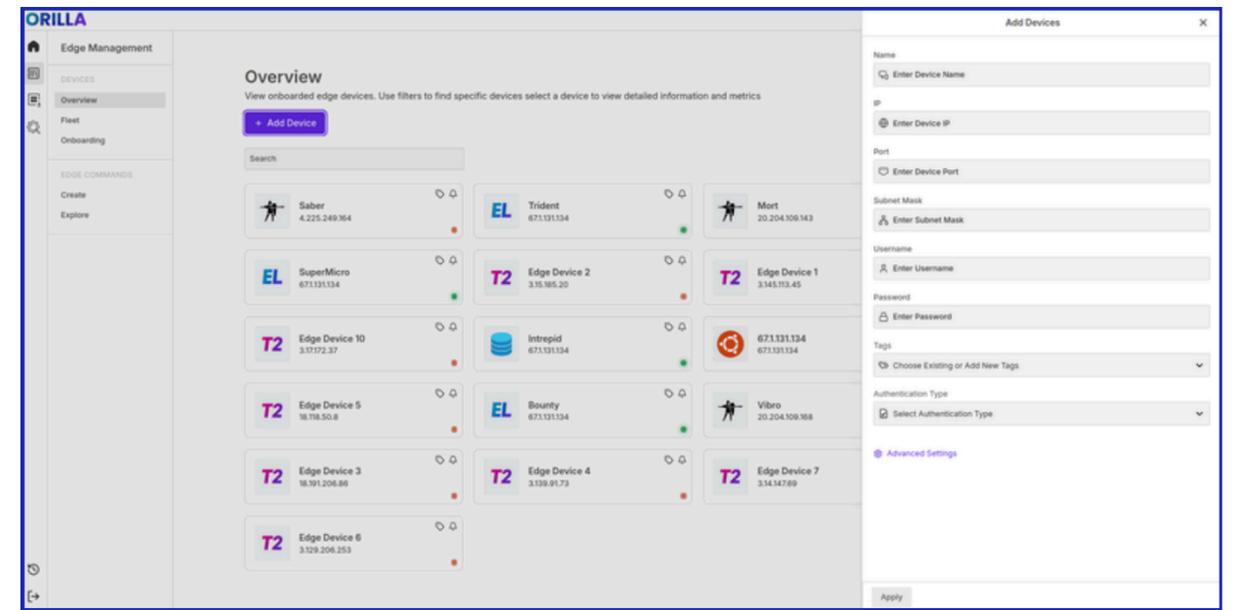

03

Process Automation. Automate processes and optimize performance by analyzing time-series on premise for faster operations and improved efficiency

FOCUS ON YOUR PRODUCTION NOT OUR PRODUCTS

At Orilla, we intentionally design all our software with a point-and-click interface so you can spend time on critical operations. There is no need for additional IT resources, Orilla does the heavy lifting for you.

Simply add a device with an IP address and click the box to fully encrypt it. Easily check device and fleet health. Drag and drop to configure the dashboard to your specifications. Point-and-click to add containerized workloads.

CONTACT US

Orilla delivers software solutions built to meet the diverse needs of industries worldwide. Our portfolio ranges from our flagship Edge Management Platform to custom Industrial Edge AI workloads—empowering enterprises with reliable, innovative, and efficient tools to accelerate digital transformation. With Orilla, organizations can standardize operations, integrate cutting-edge technologies, and harness the full potential of their OT data to drive smarter, more connected industrial performance.

Please reach out to us to learn how Orilla can help you achieve better outcomes:
