Mastioff

Best supportive nutraceutical in mastitis management

Nutrition plays an important role in protecting cows from mastitis. Cow's udder is very prone to infection. The immune system of the udder always fights germs and protects against pathogens. There are certain nutrients that can boost the immune system of the udder and protect the udder from mastitis if given regularly.

- Deficiency of vitamin A & E
- pH of the milk
- Low immunity of udder

Prevents clinical and sub-clinical mastitis, improves milk quality and production

Nucleotide: Aids in udder immunity and regeneration of mammary alveoli

Tri sodium citrate: Lower the pH of the milk and reduces pathogen load in udder

Vitamin A: Increases udder immunity

Vitamin E & selenium : Acts as an antioxidant and increases the activity of macrophages in the udder

Biotin: Aids in regeneration and managing health of milk alveoli

Zinc : Helps to build keratin in the teat canal and reduces udder inflammation

Copper: Protects the udder from free radicals and from oxidative inflammation

Amino nitrogen : Helps to increase udder immunity

Usage Indication:

For pregnant and lactating cows: 25g twice daily in the morning and afternoon for 3 to 5 days.

Shelf life: 2 years from month of manufacturing

Storage condition : Keep in cool dark place. Keep away from direct sunlight

Presentation: 50g and 200 g pack
