

The Industry Challenge

Challenges Facing Modern
Manufacturing

In today's fast-paced manufacturing environment, companies face increasing pressure to boost efficiency, reduce costs, and stay competitive.

However, many still struggle with outdated automation systems, operational inefficiencies, and rising sustainability demands.

Without the right solutions, these challenges can lead to higher expenses, production delays, and lost opportunities.

Unlocking growth starts with solving these critical pain points:

High operational costs

Rising energy expenses and inefficiencies

Downtime & Lack of flexibility

Our Solutions

Smart Automation Tailored for Your Needs

Automation is evolving, and collaborative robots (Cobots) are revolutionizing the industry by enhancing productivity, safety, and flexibility.

Unlike traditional robots, cobots work side by side with humans, making automation more accessible than ever.

- Safe, efficient, and easy to integrate
- Ideal for assembly, packaging, and quality inspection
- Increase flexibility in dynamic production environments

Other Industrial Robots We Offer:

Delta Robots → High-speed pick-and-place applications
 SCARA Robots → Precision assembly and small part handling

Our Solutions

Smart Automation Tailored for Your Needs

Industrial Software Solutions

Automation isn't just about hardware — smart software is essential for optimizing efficiency, monitoring performance, and ensuring seamless operations.

Our industrial software solutions provide real-time data insights and process control to maximize productivity.

SmartCIP - CIP Optimization System

- Reduces water and chemical consumption
- Cuts cleaning cycle times and energy costs

Energy Management System (EnMS)

- Tracks and optimizes energy usage
- Helps companies meet sustainability goals

Manufacturing Execution System (MES)

- Full visibility and control over production
- Reduces waste and improves operational efficiency

Our Solutions

Smart Automation Tailored for Your Needs

Multi Carrier Systems

Advanced transport solutions for filling, capping, labeling, and packaging, delivered as complete turnkey systems.

In today's manufacturing landscape, efficiency and flexibility are essential.

Multi-Carrier System (MCS) is revolutionizing production lines by enabling seamless adaptability, unparalleled precision, and optimized workflows.

Designed for filling, capping, and packaging applications, this advanced solution integrates effortlessly into existing setups, ensuring faster changeovers and consistent quality while reducing downtime.

- Unmatched Flexibility
- Increased Speed and Precision
- Seamless Integration

Key Benefits of Our Solutions

Cost Efficiency

Reduce operational costs
through optimized energy
consumption, minimized
waste, and improved
productivity. Our solutions
ensure a fast ROI while
supporting long-term savings.

Enhanced Operational Efficiency

Streamline processes and boost uptime with cutting-edge technology. Automation and intelligent systems improve throughput, accuracy, and overall equipment effectiveness (OEE).

Adaptability & Scalability

Flexibly adjust to changing production needs with modular and versatile solutions that grow with your business and support diverse product lines.

Sustainability

Achieve eco-friendly
manufacturing with reduced
energy and resource usage,
lower emissions, and
compliance with global
sustainability goals.

Why Choose InnTech Automation?

Your Partner in Innovation & Efficiency

- Expertise in robotics & industrial automation
- Industry-proven success in F&B, dairy & manufacturing
- Innovative solutions for energy efficiency & cost savings
- Flexible & scalable automation solutions

Want to boost efficiency & reduce costs?
