TEAM NELCO SETS A BENCH MARK FOR TRACK & FIELD EQUIPMENT!!

Established in 1942 at Lahore in undivided India and reborn in 1950 at Meerut after the partition of India, Nelco has become the most recognized Track & Field equipment brand across the world. Be it at the Athletics Federation of India's domestic circuit, International Association of Athletics Federation's numerous meets or the Olympiads; you will find a Nelco implement everywhere.

QUALITY IS THE PHILOSOPHY

Track & Field as a unique sport makes the human body and mind reach for its ultimate boundaries of endurance and speed. We at Nelco understand that we can contribute to the athlete's performance by assuring the best quality equipment. Our quality control team constantly evaluates our finished products and raw material to consistently produce top quality equipment. New techniques and better raw material are regularly introduced to the production line to enhance quality of products.

INNOVATION IS THE WAY TO MOVE FORWARD

Athletes at the competitive level have the mental toughness, physical potential and the technique to reach the record books. But it is that extra edge which makes them clear the final bastion. It is here that Nelco steps in to provide that extra edge with The Right Implement*. Consistent and dedicated R&D has resulted in many innovations over the last few decades helping us produce the most suitable equipment for different levels of athletes.

SERVICE IS THE KEY TO SUCCESS

Nelco Track & Field Equipment is available across the nation through a network of 300+ dealers and resellers. Nelco products are available in 70+ countries through dedicated distributors. All queries addressed to our customer care email (cc@nelcoworld.com) are addressed within 24 hours by our team of experts.

THE RIGHT APPROACH

All the above factors have contributed to Nelco being known as the best engineered and most popular

THE RIGHT IMPLEMENT*

Team Nelco understands what it takes for a world class thrower to reach that extra distance. This is why the right implement* is required. Nelco has a perfect Discus, Shot or Hammer for every thrower!!

We help the throwers to select the best implement to reach his or her full potential. Superior aerodynamics, firmer grip and the right ingredients make it much easier for a thrower to handle the implement and have full control over it when it leaves the hand resulting in a better and farther throw. Constant innovations have resulted in our highly acclaimed PMD* and HRM* technologies for discus throw enabling us to produce the widest range of discus for various level of throwers.

The new Nelco KIN-O-MAX Shot Puts and Hammers are designed to achieve maximum Kinetic Energy when in motion to enable a perfectly Balanced Throw. This optimum performance is achieved with a right mix of material, diameter and weight.

The Right Discus*

A higher rim weight discus suits a thrower who has a more evolved technique. A thrower who can maintain a spin through two-thirds or more of the throw should move up to a higher rim discus. A lower rim discus may stay in the hand longer for more control and may suit a beginner or an intermediary thrower.

Wind is also a factor that effects selection of your discus. A high rim discus that may encounter a crosswind will tip prematurely reducing throw potential. One may move to a lower rim discus for better control in windy conditions. Thus, it is necessary to carry a mix of discus in your kit.

Nelco is the most thrown discus than any other brand over the past two decades.

Nelco is the only brand to offer Distance Rated Discus with its Trademark RimGlide Technology. RimGlide Technology is available on all Competition Discus. It makes it easier for a thrower to select best suited Discus.

Nelco offers PMD technology on all its top end discus to ensure that your expensive competition discus outlasts all others.

Nelco is the most copied discus in the world. Kindly ensure that your discus comes with a Nelco hologram to ensure genuine product.

The Right Shot Put*

From a bio-mechanical point of view, a larger shot will give a greater contact area and push zone resulting in a farther throw. But it is not necessary that the largest shot is the most suitable.

It is essential to select the most suitable diameter of shot based on your finger size. Finger length is critical. The shot must rest on the pad (callus) of the palm and the fingers must be up the side of the shot. Throwers with shorter fingers may find that the smaller diameter shot feels better at delivery and similarly, those with longer fingers may like the feel of the larger diameter shot.

Our new KIN-O-MAX technology addresses all these issues with a perfect Shot Put for all throwers!
