**2026**

**We are a team of world class experts who have pioneered innovation in bioengineering and regenerative medicine for the past 30 years.**

“We are driven by a commitment to improving human health. Years ago no one else believed that 3D human tissue models would become indispensable to medicine. **CTIBIOTECH™** were the first to make that vision a reality”

-Pr. Colin McGuckin from **CTIBIOTECH™ & CTIBIOTECH USA™**

## OUR 3 POLES OF EXCELLENCE

At CTIBIOTECH USA™, we place science and innovation at the service of medical progress.

Our centers of excellence are built on high-quality, ethically sourced human cells and tissues, providing reliable and predictive solutions tailored to the needs of research and development.

Ethically sourced human tissues, cells, and biological samples provide a reliable foundation for cutting-edge research and innovation.

Advanced predictive human cell bioassays for skin enable faster and more reliable preclinical testing, optimizing both time and cost efficiency.

High-quality human cells designed to optimize scientific research and accelerate biomedical innovation. Ideal for the development of new therapies and biotechnological applications.

## HOW CAN WE HELP YOU?

We can work with you on several levels according to your requirements. The main partnership options are:

### Open Lab

Use of our state of the art R&D facilities with access to CTIBIOSOURCING™ and a highly trained team of international researchers located just 10 minutes from Lyon International Airport.

### Collaborative Research

We are always motivated by new challenges and joint research. Contact us so that we can help you with yours!

### Contract Testing

We work with well known multinationals and institutions (hospitals, clinics and universities) on proprietary projects where confidentiality is essential.

### Consulting

Our problem solving experience and expertise can be shared on a project-by-project basis.

# Human Skin Tissues for Research

CTIBIOTECH USA™ provides human tissues exclusively for research purposes, in full compliance with French and European regulations. Thanks to our extensive network and biosourcing expertise, we ensure a supply of fresh skin from various body locations.

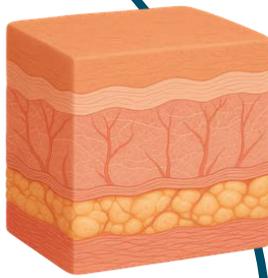

Our team carefully selects both male and female donors, offering a wide range of characteristics to meet the specific needs of each research project. We also provide worldwide delivery to support researchers across the globe.

/© CTIBIOTECH™, Skin

- Adult human Skin, Full Thickness (with or without adipose tissue)
- Aged human Skin, Full Thickness (with or without adipose tissue)
- Juvenile human Skin, Full Thickness
- Dermatomed Skin (without the dermis)

Fresh or Flash frozen

### Adult & Aged :

- Skin Disc 2mm to 40 mm
- Skin square 1cm<sup>2</sup> / 200cm<sup>2</sup>

### Juvenile :

- Skin Disc 2mm to 8mm
- Whole foreskin

FFPE & OCT

- Access a complete range of skin phototypes from the lightest to the darkest

- Human skin samples from male ♂ and female ♀ donors
- Body zones : abdominal, arms, thighs, face, eyelids, adipose tissues

# Primary Human Skin Cells

The Skin Cells offered by CTIBIOTECH USA™ are derived from ethically and securely sourced human skin.

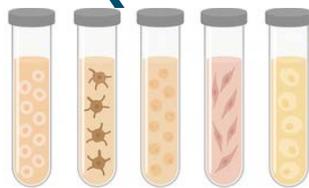

They are cultured and prepared in our laboratories to provide a reliable and high-performance material, suitable for the development of treatments, skincare products, or *in vitro* studies. Used either alone or integrated into more complex skin models, these cells help to better understand skin mechanisms, test active substances, and simulate pathologies. Readily available and delivered with personalized scientific support, they represent a key solution for innovation in healthcare and dermo-cosmetics.

“The Ex vivo kit from CTISkin is a standardised and ready to use solution for your efficacy and safety tests. Collected just after the surgical intervention, we provide you with the freshest possible skin biopsies. According to the declaration of Helsinki, all skin samples are collected with donors informed consent and tested for HIV, HCV and HBC to ensure a negative serotyping. Provided with adapted culture medium, those biopsies can be used up to 11 days after the surgical resection. We can provide you regularly with fresh Ex Vivo skin.

## Turnkey Solution For Preclinical Testing

Including

Insert for transport

CTISKIN® Reagent in 250-125-60 mL

### Features

Weekly supply for recurrent testing projects Customizable: Select your donor inclusion criteria\*

- Localisation

“ The product CTIBabyskin Kit™ from CTIBIOTECH™ contains an advanced solution to allow you to carry out your tests on fresh ex vivo Human biopsies. The Baby Skin model is a new advanced procedure, taking tissue from newborn babies, that is normally thrown away. It is a highly sensitive model appropriate for testing of everything coming into contact with baby skin : creams, cleansers, wipes, food, clothes. Supplied fresh with culture media created by CTIBIOTECH™, this product allows you to have access to a study model as close as possible to *in vivo* conditions. The original tissues have been obtained after informed consent of patients under the provisions required by US Law.

## Human hair, for your *in vitro* tests

CTIBIOTECH USA™ offers human scalp models incorporating hair follicles, isolated sebaceous glands, and individual hairs, developed in our laboratories from bio-sourced human tissue. These models are designed to meet the needs of the dermocosmetic, pharmaceutical, and academic sectors. Our models offer a relevant alternative to traditional tests, with better biological representativeness and high adaptability to your research or development projects.

## Human Blood: A Vital Resource for Innovative Research

Much more than a vital fluid, human blood is a valuable biological resource for research and innovation in healthcare.

At CTIBIOTECH USA™, we offer rigorously selected and prepared samples of umbilical cord blood and adult peripheral blood to support laboratories working in immunology, oncology, cell therapy, and personalized medicine.

/© CTIBIOTECH™, Blood

/© CTIBIOTECH™, Blood

### Peripheral Blood

Origin: voluntary adult donors, in partnership with certified centers.

- HIV, HCV, HBV tested

#### Anticoagulant

- CPD
- K2EDTA
- K3EDTA
- ACD
- CITRATE
- NaHep

#### Blood derivatives

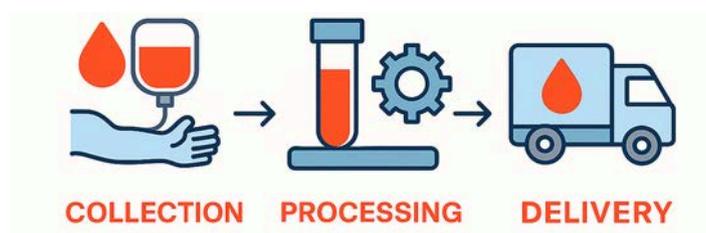

- Leuko-Platelets bag
- Whole peripheral blood Collect/Ship same day
- Peripheral blood serum / Pooled donors
- Peripheral blood plasma / Pooled donors
- Peripheral blood Buffy coat
- Peripheral blood Buffy coat on CPD

### Cord Blood

Origin: collected at birth (umbilical cord).

- HIV, HCV, HBV tested

- Whole cord blood on K2EDTA fresh or frozen : tube
- Whole cord blood Collect/Ship same day
- Cord blood serum / Pooled donors
- Cord blood serum plasma / Pooled donors

## High-quality Immune Cells for your research

At CTIBIOTECH USA™ our mission is to provide high-quality biosourcing solutions to support your preclinical research with precision and scientific relevance.

Thanks to our expertise and advanced technologies, we ensure the quality and relevance of these cells, allowing you to study immune responses under conditions close to physiological reality.

By integrating these cells into your research, you gain more reliable and predictive data on the immunological effects of your products. CTIBIOTECH USA™ positions itself as a trusted partner committed to supporting your scientific projects with rigor and reliability.

## Our Immune cells

We offer a comprehensive range of cryopreserved immune cells, carefully sourced from adult peripheral blood and cord blood to meet the diverse needs of your preclinical research. Our rigorous quality control processes ensure that each batch maintains high viability and functionality:

PBMC

T-Helper Cells (CD4+)

Hematopoietic stem cell (CD34+)

NK Cells (CD56+)

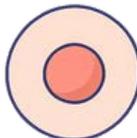

T-Cells (CD3+)

T-Killer Cells (CD8+)

T-Regulatory Cells (CD25+)

Monocytes (CD14+)

B-Cells (CD19+)

# High-quality Stem Cells for your research

At CTIBIOTECH USA™, we focus on the powerful capabilities of human stem cells to design and produce complex, functional *in vitro* models that push the boundaries of biomedical research.

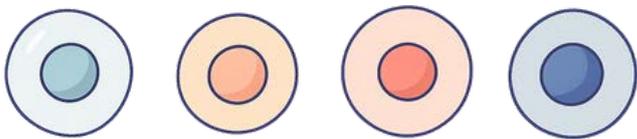

Whether pluripotent, mesenchymal, or adult stem cells, these unique biological sources provide unmatched versatility for recreating key human tissue functionalities under physiological and pathological conditions.

Our stem cells are carefully expanded under controlled conditions and cryopreserved at defined passages to ensure optimal viability, phenotypic stability, and batch-to-batch consistency. Once thawed, they retain full capacity for proliferation and differentiation into relevant human cell types, including epithelial, hepatic, neural, or immune-related lineages.

## Our Stem Cells

We source our adult stem cells from ethically obtained human tissues such as bone marrow, dental pulp, and adipose tissue. These origins offer distinct differentiation potentials and immunological profiles, allowing the creation of tailored models for applications in oncology, immunology, regenerative medicine, and metabolic disease.

Through our expertise in stem cell biology, controlled differentiation protocols, and advanced 3D structuring, we deliver biologically meaningful models that closely mimic native tissue organization and function. These models serve as high-value platforms for drug screening, toxicology testing, and disease modelling with enhanced predictability and translational relevance.

Bone Marrow    Adipose Tissue    Dental Pulp    Wharton Jelly

## Why Choose Us?

Quality and purity of cells

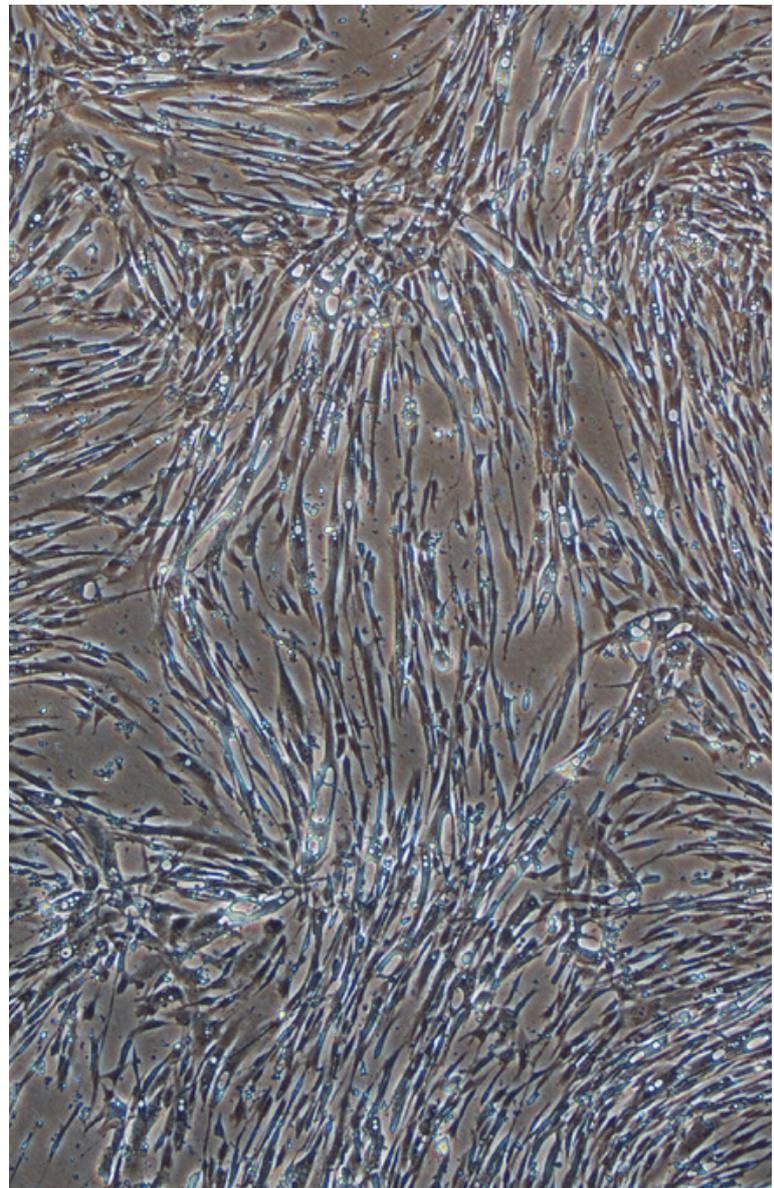

Origin and traceability

Reproducibility and reliability

Select the growth medium adapted to the chosen cell type in the Growth Medium section on pages 22–23

# Tumor Cells

CTIBIOTECH USA™ provides human tumor cells exclusively for research purposes, in full compliance with French and European regulations, and all cryopreserved to guarantee optimal quality and reproducibility.

Our team carefully selects both male and female donors, ensuring a wide diversity of tumor characteristics.

To meet the specific requirements of every research project you can choose cancer (lung, ovary, pancreas, liver, prostate, lymphoma and more), stage, grade and origin. Researchers can access not only primary tumors *ex vivo*, but also primary dissociated tumor cells (DTCs) and patient-derived xenograft (PDX) cells, available in defined quantities ( $0.5 \times 10^6$  or  $1 \times 10^6$  cells) according to their experimental needs.

By offering extensive donor criteria, including sex and medical history, CTIBIOTECH USA™ supports advanced, personalized approaches to oncology research.

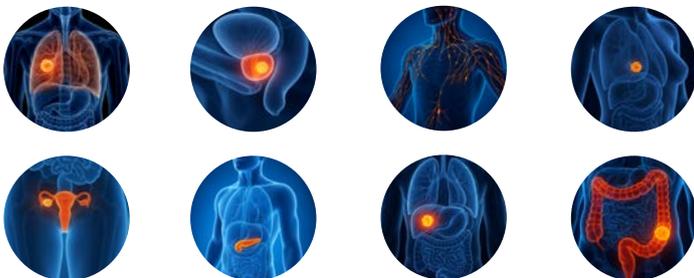

## Available Conditions

By offering extensive donor criteria, including sex and medical history, CTIBIOTECH™ supports advanced, personalized approaches to oncology research. PDX cell lines are also available to help replicate the complexity of real tumors and provide more predictive preclinical models.

- Cells type:**

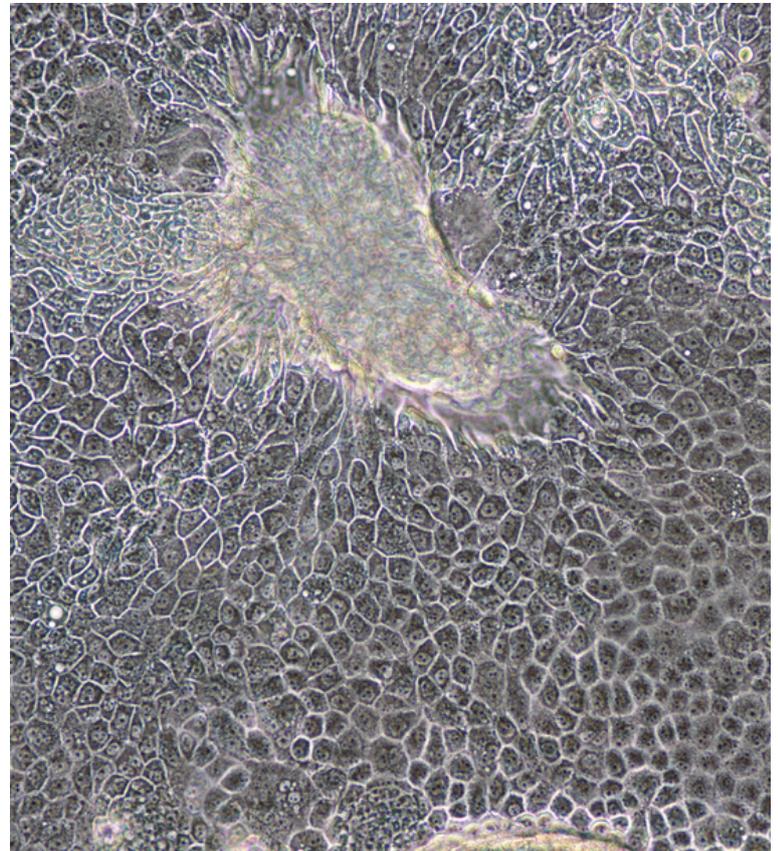

- Primary Tumor *ex vivo*,
- Primary Dissociated Tumor Cells (DTCs),
- Primary Dissociated PDX Cells
- Cell Models
- CAF (Cancer Associated Fibroblast)

- Cancer Type (lung, ovary, pancreas, liver, prostate, lymphoma and more)**

- Sex
- Age
- Medical history

Select the growth medium adapted to the chosen cell type in the Growth Medium section on pages 22–23

# Optimized Medium for Tumor and Skin Models

At CTIBIOTECH USA™, our mission is to provide high-quality biosourcing and formulation solutions to support your preclinical research with precision and scientific relevance.

Thanks to our expertise and advanced technologies, we develop and supply specialized culture medium tailored to the needs of tumor models and skin-derived cells.

These optimized media ensure the viability, functionality, and relevance of your *in vitro* models, allowing you to mimic physiological conditions more accurately.

CTIBIOTECH USA™ positions itself as a trusted partner, committed to supporting your scientific projects with rigor, innovation, and reliability.

## Our Media

Our culture media are specifically developed to recreate a highly realistic human environment, supporting optimal growth of cell models, organoids, and complex tissues. The Lipid Droplet Stimulator can also be added to modulate lipid accumulation in relevant models.

Medium for Fibroblasts (500ml)

Medium for Keratinocytes (500ml)

Medium for Melanocytes (500ml)

Medium for Adipose Tissue Derived Cells (500ml)

Medium for Sebocyte Growth and Differentiation (500ml)

Medium for Cancer Cell N°1-11 (500ml)

Lipid Droplet Stimulator (LDS) (500 µL)

\*Check the catalog to see the details of the cancers supported by the medium.

## Why Choose us :

Recognized  
expertise

Innovative projects

A commitment to ethics  
and traceability

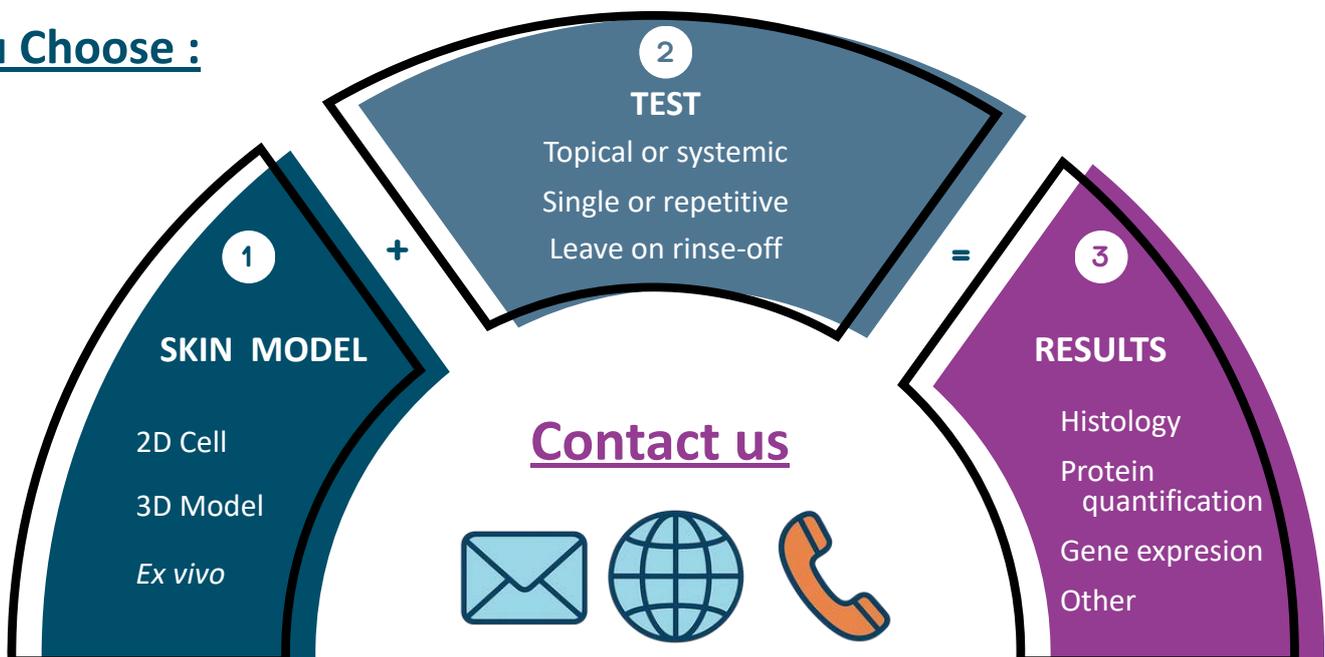

## Your Project, Our Expertise

CTIBIOTECH USA™ supports you in the design and implementation of tailor-made projects, carried out directly in our laboratories.

Our team provides its scientific and technical expertise to develop innovative solutions adapted to your specific needs.

We also assist you in exploring approaches not yet defined by regulations, and in the formulation of your product claims based on solid scientific data.

## You Choose :

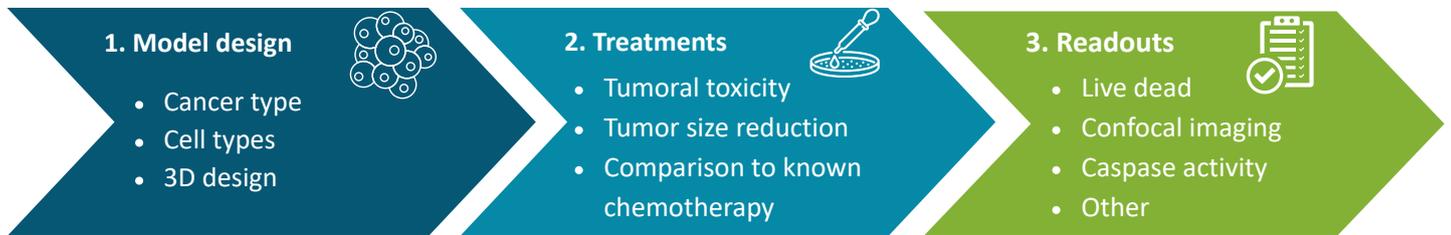

© CTIBIOTECH™, 3D Models

## CTIMICROTUMORS for predictive and personalized medicine

By combining excellence in cancer research, tissue engineering and 3D bioprinting, CTIBIOTECH USA™ has developed the building blocks to produce large-scale, reliable, robust, reproducible, predictive, personalized 3D biological models of human tumors in sufficient quantity to accelerate the development of drug candidates for cancer chemotherapy and immunotherapy.

## The Power of 3D to Drive Your Projects Forward

At CTIBIOTECH USA™, we offer a fully **customized service**: you choose the test you want to perform, and we carry it out in our own laboratories using our 3D models.

All the steps outlined above are handled by our expert team, according to your specific needs in oncology. These innovative models, positioned between the limitations of 2D cell cultures and the ethical concerns of animal testing, provide a human-relevant, reliable, and predictive alternative for your R&D projects.
