

Pioneering NIS2 and ISO 27000 Cybersecurity Standards

Coonect ApS and our dedicated team are working hard to prepare us for the obligations arising from the NIS2 directive as well as the international standards in the ISO 27000 series, including ISO 27001. As a company specializing in critical telecommunications infrastructure, we see it as our responsibility to follow these requirements closely and be ready for the day our customers expect a fully documented and controlled approach to information security.

To strengthen our cybersecurity position in line with NIS2 and ISO 27001, Coonect ApS has initiated a long-term strategy for gradual implementation in our daily operations. The journey starts with a comprehensive gap analysis and risk assessment, where we identify and assess potential vulnerabilities in our systems, processes and organizational framework.

In accordance with NIS2 requirements, we have established stricter access controls, including encryption of sensitive data when necessary, as well as restricting access to authorized employees. Our focus on continuous training is supported by ongoing security awareness training to keep all employees up to date on the latest cyber threats and effective preventive measures.

Working towards full compliance with ISO 27001 involves establishing and maintaining a robust Information Security Management System (ISMS). Coonect ApS works proactively with internal audits and evaluations to identify opportunities for improvement, and our incident response plan ensures that we can respond quickly and efficiently to security incidents – in full compliance with both NIS2 requirements and ISO 27035 guidelines.

Collaboration and transparency are essential to meet these standards. We foster a culture where employees are encouraged to report safety-related observations and concerns immediately. This shared responsibility strengthens our resilience against the ever-evolving cybersecurity threat.

In conclusion, Coonect ApS recognizes the importance of the NIS2 directive and the ISO 27000 series for our work with information security. Our proactive approach – with strong risk assessments, controlled access protocols, continuous training and engaged employees – positions us as a frontrunner in the industry. As the threat landscape evolves, our dedication to NIS2 and ISO standards remains a guarantee of the trust of our customers and partners.
