

DECENTRALIZE EVERYTHING

ABOUT US

We are a team of former financial service providers, business consultants, IT specialists, and tax advisors.

Our mission is to shape our lives and those of our families in a decentralized, responsible manner, free from third-party interference.

Our service is unique in Europe because no other company considers the full spectrum of digitalization as we do.

We pay close attention to detail and develop personalized solutions.

Quality over quantity.

WELCOME TO DECENTRALIZATION

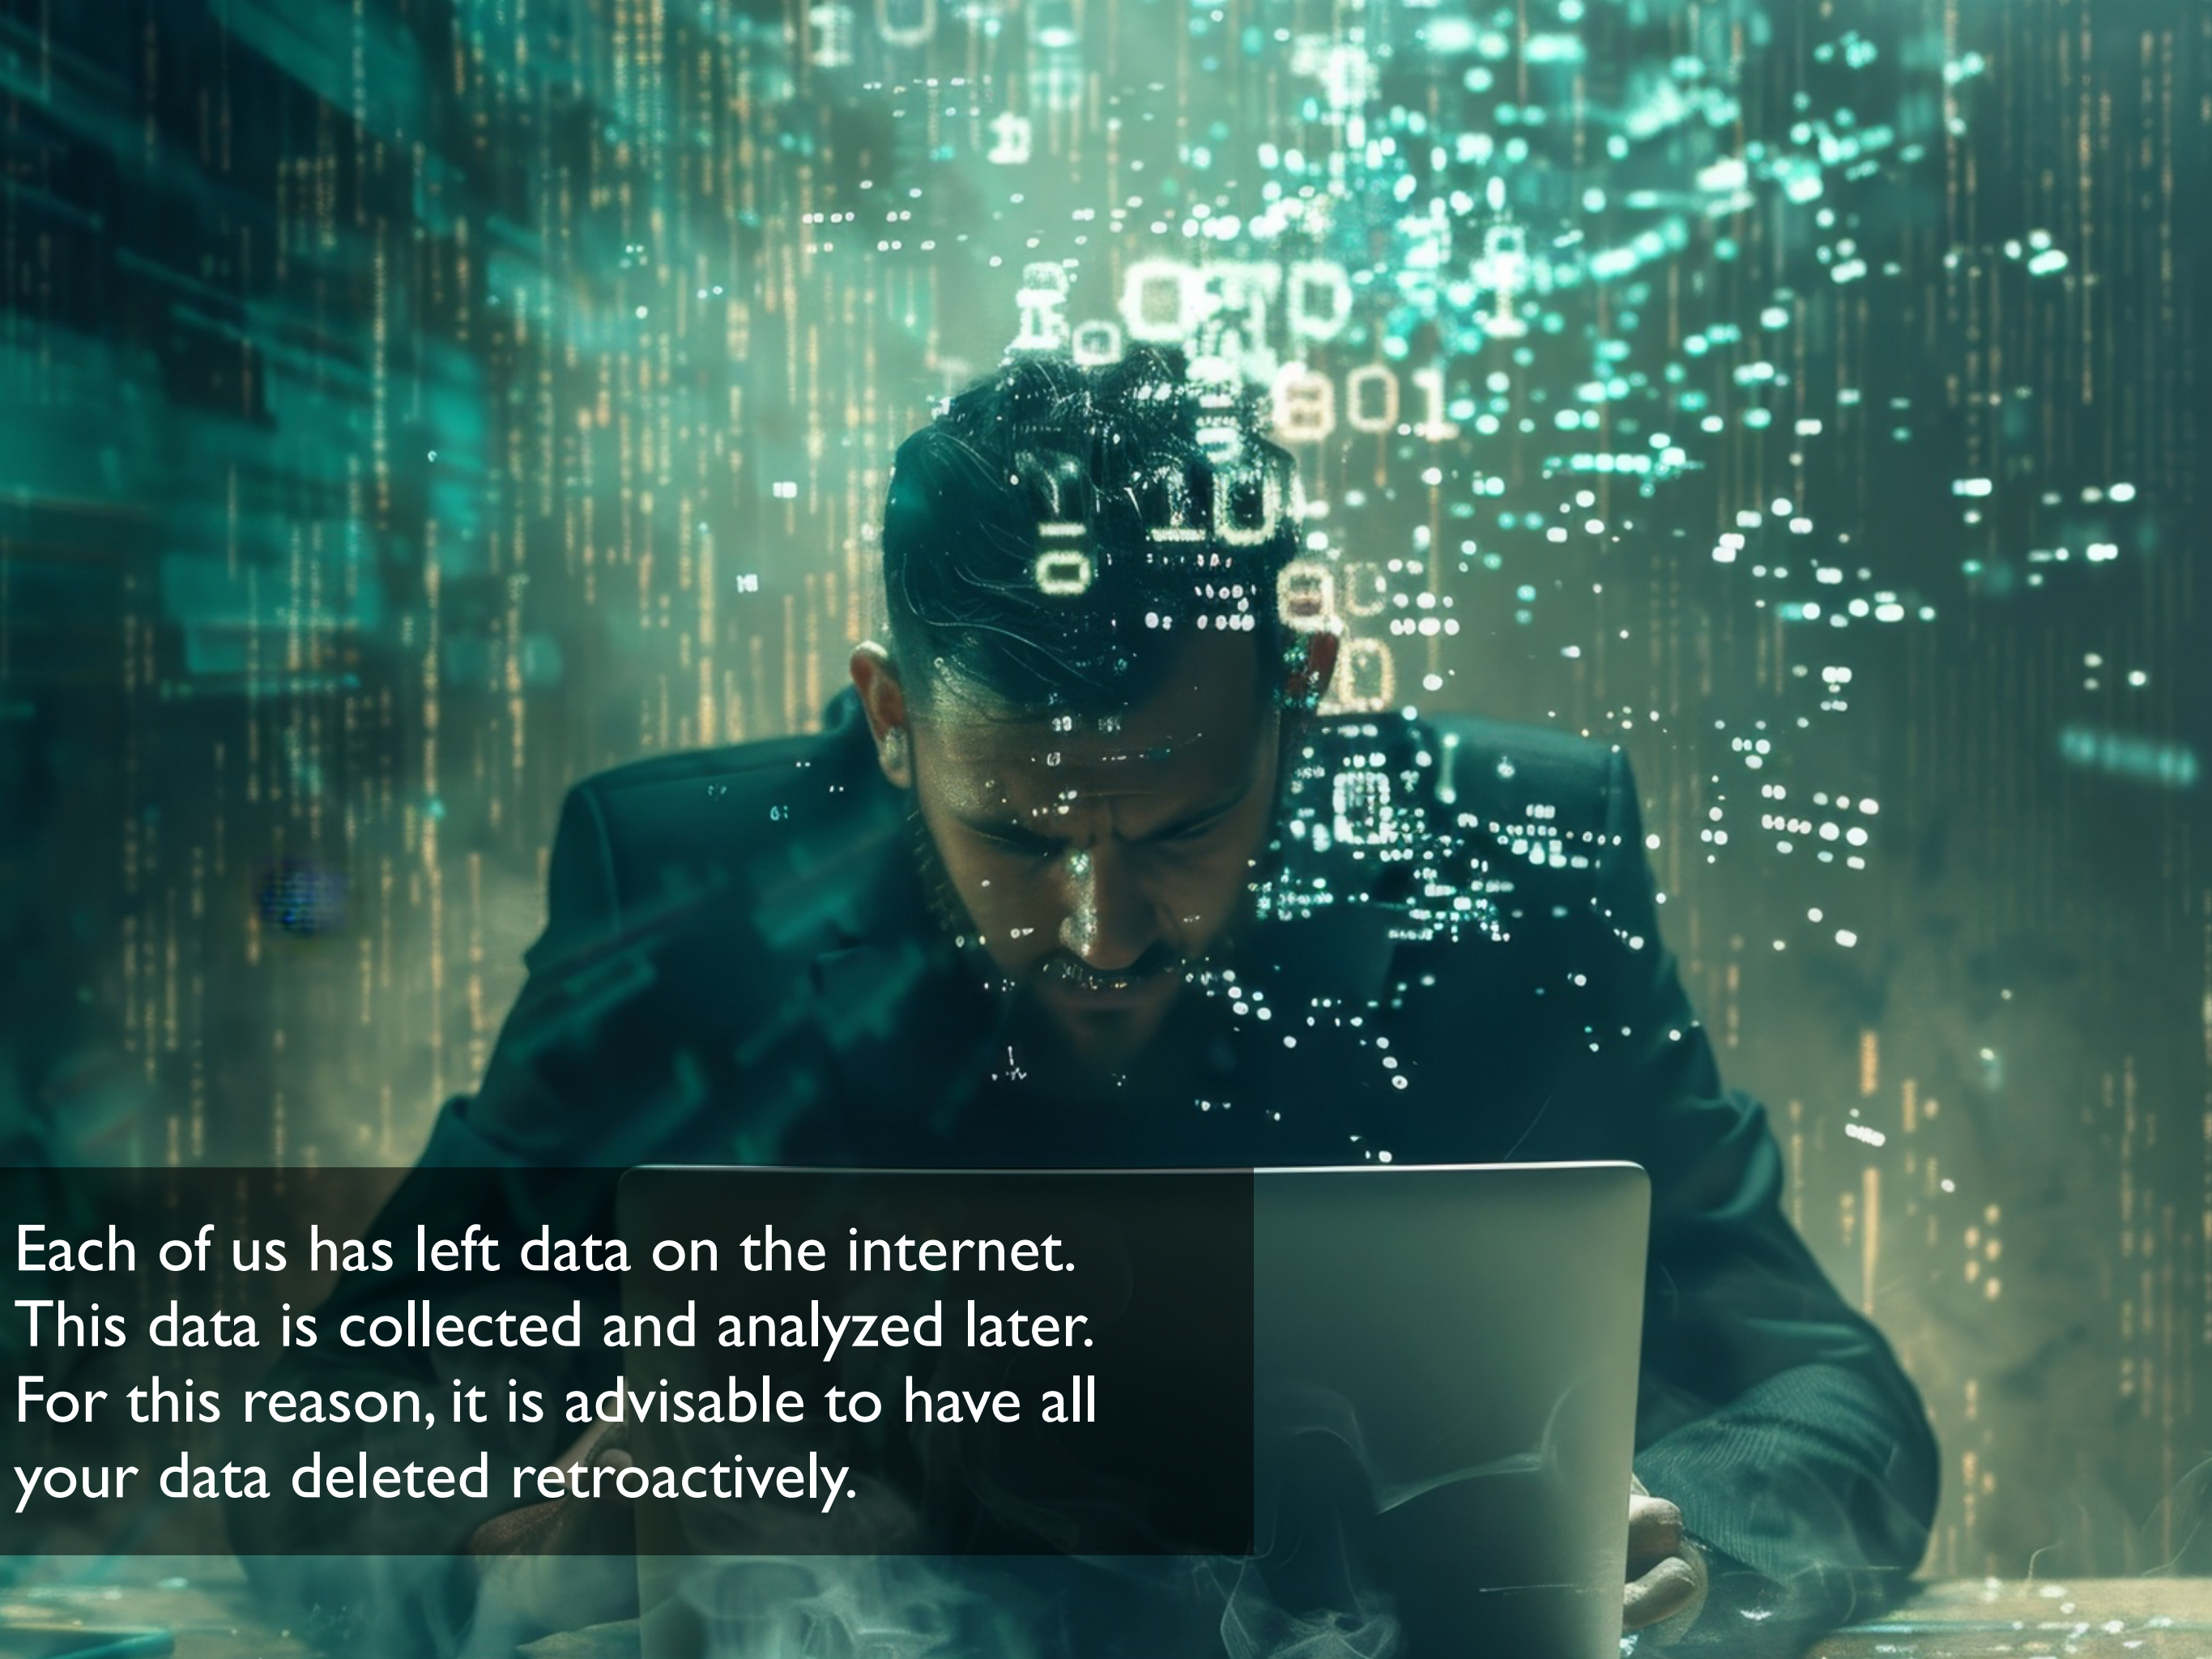

In today's world, we are witnessing a rapid shift towards centralization.

The intrusion and dissolution of privacy seem to have become key motives for governments and states. Digital currencies or a digital passport will completely erase the realm of privacy.

Take advantage of the opportunities available today to proactively protect your privacy and the wealth you have built.

Whether you emigrate or simply run away,
the Matrix - the internet - is everywhere.
As a result, people can be controlled and
restricted from anywhere in the world.

A man in a dark suit is looking down at a laptop. The background is a dark, rainy cityscape at night. Overlaid on the image is a digital rain effect, with binary code (0s and 1s) and various digital symbols floating in the air. The overall color scheme is dark with teal and blue highlights from the rain and digital effects.

Each of us has left data on the internet.
This data is collected and analyzed later.
For this reason, it is advisable to have all
your data deleted retroactively.

DECENTRALIZED SMARTPHONE

Just like with the laptop, this phone is fully designed for anonymity.

You even get an anonymous data plan with it, ensuring that no internet or mobile provider shares your metadata. Additionally, it helps protect your private phone number. Never link websites on the net with your personal number. This should only be known to close individuals.

DECENTRALIZED NOTEBOOK

This notebook is designed to ensure it's not linked to your personal data. There is no data exchange involved.

DECENTRALIZED ID

Nowadays, it is possible to generate a second ID. You can use this ID to open accounts, such as for banking, internet services, etc. The issuing state of this ID does not exchange data with the EU.

DECENTRALIZED ASSET PROTECTION

It is not advisable to hold private wealth within the EU at this time. The upcoming asset registry suggests what is being put into place. Instead, one should follow the example of the elites and own as little as possible privately. Moreover, with specific setups, it is even possible to completely bypass inheritance tax.

DECENTRALIZED COMPANY

In the USA, there are states where the right to privacy is inviolable. This structure is particularly interesting for foreigners since the USA does not share any data with the EU. You essentially own this company anonymously. For some, it also serves as a liability shield.

ASSET PROTECTION IN THE USA
With a US LLC, assets can be specifically protected.

US BANK ACCOUNT

With this account, you protect yourself against regulations such as withdrawal limits. In the USA, you can manage funds without limit, without having to report them to US authorities. Additionally, this helps protect against upcoming CBDCs that are planned in the EU.

DECENTRALIZED ASSET MANAGEMENT
Be your own bank. The blockchain allows for the
secure digital storage of assets.

DECENTRALIZED INTERNET

What we commonly use as the internet in our daily lives is the CLEAR NET, which is censored. However, there is a way to access the internet 100%. The Clear Net can easily be shut down by third parties or have specific sites blocked. With access to the DECENTRALIZED Internet, this is not possible.

DECENTRALIZED EMAIL SETUP
With this setup, emails can be encrypted. Traditional email providers collect and share all data with third parties. This decentralized solution ensures that your communications remain private and secure.

DECENTRALIZED ADDRESS

To protect your privacy, it's advisable to set up a decentralized mailing address. Only your closest circle should know your real address and whereabouts — not even authorities!
