

# 10× Cheaper, Equally Safe Insulin Exists. Let's Bring It to America.

## Why You Should Be Outraged

Americans are dying because bureaucracy makes insulin artificially expensive. The same vial costs \$300 in America, \$30 in Germany, \$25 in the UK—not because it's different or less safe, but because FDA forces manufacturers to re-prove what Europe, Britain, and Japan already confirmed using **identical safety standards**. Diabetics ration insulin, skip doses, end up in emergency rooms. Some die. Meanwhile, your government wastes \$4-5 billion annually on inflated Medicare/Medicaid insulin prices while affordable versions sit blocked by redundant paperwork.

## Why This Will Work

**Patients** get the same insulin, 90% cheaper. **Taxpayers** save \$4-5B annually—no new taxes. **Businesses** compete fairly on a level playing field. **Doctors** gain treatment options. **Safety** is unchanged—FDA keeps full authority for inspections, recalls, and enforcement. We just stop making patients pay twice for the same review.

**It's bipartisan:** Progressives want affordable healthcare. Conservatives want deregulation and markets. This delivers both.

## Why This Time Is Different

Past attempts used "importation" laws (§§384, 804) that **exclude biologics**—pharma killed them in court. **This Order uses biosimilar authority (§262(k)) and shortage response (§356c)** instead. We're accelerating FDA review by accepting trusted allied assessments, which FDA can already legally do.

### Anti-bureaucracy mechanisms:

- Every deadline public; 5-day delays require written justification naming the blocking office
- 10-day delays escalate to Deputy Secretary + White House
- 48-hour clearance turnarounds or legal citation required
- 10-15 day reviews with public variance memos if missed
- Funded by existing BsUFA user fees (Congress can't defund via rider)
- OMB tracks as Presidential Priority with quarterly performance reviews

**Previous orders agencies could ignore. This has enforcement architecture.**

## What Happens Next

Within 30 days: 10-page streamlined application published

Within 60-120 days: First affordable insulin on shelves

FDA relies on EMA/MHRA/PMDA reviews, coordinates with pharmacies, launches price dashboards

**Same safety. Faster access. Lower prices.**

---

We are your Polish friends and allies. We have no financial interest—just a solution to stop Americans dying from preventable insulin rationing. When trusted partners already proved medicine is safe, America shouldn't make patients pay twice.

**We ask President Trump to sign this. Now.** Every month we wait, people die. This costs nothing, saves billions, saves lives. **Sign it.**
