PROZZO® COLLECTION

COLLECTIVE CREATION

The Prozzo Collection is a grand amalgamation of three categories of tiles which include Prozzo Select, Prozzo Endless and Prozzo Bookmatch. Prozzo Select includes urban and unique designs that are crafted to amplify a place. Prozzo Endless is a collection of elegant tiles that gives an endless illusion to a space. Prozzo Bookmatch tiles give a classy look to a space with their grandeur.

PROZZO® SELECT

ATTRACTIVE COMBINATIONS FOR SUPERIOR SPACES

It has been more than three years that you all embraced the 'PROZZO' Collection with open arms. It allows the development of aesthetically pleasing spaces without compromising on the technical aspects.

Over the years, we have observed that matching the wall tiles' concepts with floor tiles is challenging while selecting the tiles. Tile selection was challenging because we had to roam from one place to another to get the satisfactory matching combinations of wall and floor tiles' designs.

In these uncertain times, where we have to take utmost care of ourselves while away from home, 'Simpolo' has created a collection that will make the tile selection activity easy and exciting! Each design concept created in 'PROZZO-SELECT' offers more than four matching combinations of wall and floor tiles' concepts in different surface finish.

'PROZZO-2021' will allow you to complete the tile selection only from one place to get the most satisfying design combinations of wall and floor tiles that your spaces deserve.

ONE SET,
MULTIPLE
POSSIBILITIES.

CREATE YOUR BATHROOM IN YOUR STYLE BY CHOOSING A UNIQUE COMBINATION FROM A SET OF TILES. DESIGN A CUSTOM THEME WITH THE USE OF LIGHT, HIGHLIGHTER AND DARK TILES FOR YOUR BATHROOM.

BATHROOM TILING OPTION – 1

Highlighter, 60x120cm

Light, 60x120cm, Glossy

Dark, 60x120cm, Glossy

Dark, 60x60cm, Matt

Different ambiances can be created with a combination of Prozzo Select tiles. In this ambient, Highlighter, Light – 60x120cm and Dark – 60x120cm are used as wall tiles and Dark – 60x60cm is used as floor tiles. Light – 60x60cm is not used here.

BATHROOM TILING OPTION – 2

For this style, Dark – 60x120cm and Light – 60x120cm are used for tiling the walls and Dark – 60x60cm is used as floor tiles. Here, Highlighter and Light – 60x60cm are not used.

Dark, 60x120cm, Glossy

Light, 60x120cm, Glossy

Dark, 60x60cm, Matt

BATHROOM TILING OPTION – 3

In this tiling style, Dark – 60x120cm and Light – 60x60cm are left out while using Light – 60x120cm and Highlighter to highlight the walls. Dark – 60x60cm is used for flooring.

Highlighter, 60x120cm

Light, 60x120cm, Glossy

Dark, 60x60cm, Matt

BATHROOM TILING OPTION – 4

Here, Light – 60x120cm and Light – 60x60cm are not used instead, the bathroom is tilled using Dark – 60x120cm and Highlighter as wall tiles and Dark – 60x60cm as floor tiles.

Highlighter, 60x120cm

Dark, 60x120cm, Glossy

Dark, 60x60cm, Matt

BATHROOM TILING OPTION – 5

For this decor style, only Light – 60x60cm and Dark – 60x60cm are used.

PROZZO® BOOKMATCH

EXPLORING
NEW STANDARDS
IN DESIGN AESTHETICS

The concept of 'Bookmatch' has received a good response in recent years. We, at 'Simpolo', are taking this opportunity to expand the 'PROZZO BOOKMATCH' collection with more grand and vibrant designs.

Along with a one-piece bookmatch, we are also adding a two-pieces bookmatch as well. The collection is created for you to select the best suitable bookmatch for your spaces.

SINTERING TECHNOLOGY

The latest Sintering Technology is capable of reaching very high temperatures of up to 1225°C and above. Therefore the technical characteristics of ceramics are strengthened and amplified. The resultant product has high strength with a certain amount of elastic flexibility.

IMPACT RESISTANCE

This material has incredible strength. The MOR is 40N/mm2 (granite is 13.8N/mm2), breaking strength 2000N (at least 30% to 40% better than granite) and impact resistance of 0.55.

ZERO WATER ABSORPTION (< 0.06%)

The sintering at exceptionally high temperatures renders the product resistant to scratching, staining and fading because of its near zero water absorption (< 0.06%) whereas in case of granite, it is 0.15%.

STAIN RESISTANT

Low porosity makes these sintered surfaces impervious to harsh chemicals like bleach, hydrochloric acid and other cleaning agents. Sintered slabs are able to withstand extreme heat and can be spray painted with no irreversible damage to the material.

INSTALLATION PROCESS

HANDLING

- To prevent breakage, we recommended to keep all Large Format Tiles in their original packaging during handling.
- Tiles measuring 60x120cm or less can be handled by hand.
- To handle Large Format Tiles, we recommend to use lifting tools with a sufficient load capacity.
- The use of forklift is recommended; however, it has to be equipped with following fork details:

- Minimum length of 1.2 m if the crates are handled resting on the long side.
- Minimum length of 2.1 m if the crates are handled resting on the short side.
- It is recommended that you handle the Frame individually.

CUTTING

- When cutting Large Format Tiles, we recommend to use professional dry cutters. Using other tools may lead to uneven cuts or breakage of the material.

It is recommended to check the cutter blade before any cut. A damaged blade increases the risk of damage.

BLACKROUND / BASE / SCREED

- Prepare a screed with a perfectly flat, dry, compact, dust-free surface, with no cracks or other visible damage. The ideal height difference should be no more than 3 mm, measured using a 2 m spirit level.
- In case of slightly cracked or non-solid screed, it is recommended to use as crack preventing mat between substrate & slab. Screed should have suitable

hardness and mechanical resistance to stresses due to the final uses. It should be prepared using perimeter bands & all structural expansion joints as necessary.
- It should be according to BS 8204-1-2003 or DIN 18560 standards.

LAYING WITH ADHESIVES

- We recommend laying with this technique, which should be carried out by suitably qualified workers with appropriate equipment.
- While choosing the adhesive, we recommend you to bear in mind the following: type of Large Format Tiles (group to which they belong and size), type of surface to be tiled and intended use of room.
- Adhesive should be applied on the floor as well as on backside of tiles with 3-4 mm thickness.
- To make corrections, we recommend you to check the material before the adhesive dries.
- Adhesive will vary depending on the surface so follow manufacturer recommendation. Cementitious Adhesive (C2 Category - C2TES1) is recommended.
- Apply the adhesive onto the back of the slab with a 3 mm trowel and should be well distributed on corners & edges.

- It must be spread over in one direction only. Ideally it should be spread towards shortest direction of the tile.
- Spread the adhesive for one tile (pc) onto the floor substrate using a 15mm U-notch or a 10mm V-notch trowel and following the same direction as previously applied to the back of the slab. Adhesive should have 100% contact with tiles/substrate to avoid hollow sounding.
- It is recommended to start from the centre of the slabs and then move towards the edges.
- Tap the slab with a rubber mallet for a complete fixing ensuring the air is expelled.
- It is recommended to handle slabs with appropriate equipment.

JOINTS

- Deciding where to position the joints is also a part of the work which should be entrusted to qualified workers.
- The joints must be positioned:
- On structural connections (structural joints)
- Between the wall and the floor (perimeter joints)
- Between one tile and another (laying joints or gaps)
- Between tiles and other materials (e.g. pairings between ceramic, linoleum, or wood).

- A 2 mm joint spacer is suggested for all sizes.
- For Large Format Tiles, a 2 mm joint is strongly recommended, as well as proper positioning of spacers on floor sides.
- With help of 2 mm spacer & thanks to a 0.8 caliber (meaning that a 120x240cm minimal size actually measures 119.8x239.8cm), different sized tiles can be used within a single floor pattern, while still achieving perfect laying.
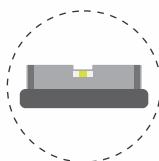

USE OF TILE LEVELLING SYSTEM DURING THE INSTALLATION

- For optimum surface performances, it is strongly recommended to use a tile levelling system.

- This solution also acts as a spacer for joints, thus contributing to make the installation more accurate.

GROUTING

- We recommend you to use grout with the same colour as the product.
- We recommend you to wait for the adhesive to dry completely before grouting the joints.
- We also advise you to ensure there is no adhesive or dust in the joints.
- Apply the grout using rubber trowel.
- Both cement & epoxy grout can be used. It is not recommended to use grouting with coloured pigments in contrast with colour of tiles.
- We recommend you to grout no more than 4-5 square metres of tiling at a time. This applies in particular when laying textured, non-slip and polished tiles.

- You are advised to remove all excess grout from the tile surface while the grout is still wet, working in diagonal movements. This applies in particular to tiles laid in outdoor areas.
- Use a damp sponge and perfectly clean water to thoroughly clean the entire tiled surface and the joints.
- We then recommend that you dry the surface with a damp cloth.
- Considering how quickly epoxy grouts set, if these are used, we recommend you to clean the excess grout immediately with a sponge and plenty of water.
- On the day after grouting, you should give the laid tiles a second cleaning with alkaline detergents.

CLEANING AFTER LAYING

- Thorough initial cleaning is essential to ensure the tiles a long-lasting appearance over time. It should not be carried out until at least 4 to 5 days after laying and grouting but no later than 10 days afterwards.
- For washing, we advise you to use an acid-based product, diluted according to the instructions provided by the manufacturer. However, we advise against the use of products containing hydrofluoric acid or derivatives thereof.
- It is a good idea to use a piece of unlaid tile, or a hidden part of the laid tiles, to check the resistance of the ceramic surface to the acid. This applies in particular when laying honed or polished tiles.

- When you start washing, it is worthwhile soaking the tiled surface first of all, focusing in particular on the joints. The acid solution must be left to work for no more than two minutes and must never be left to dry.
- To remove the acid solution, one of the following methods should be used: single-brush machine equipped with a non-abrasive disc, a wet vacuum, or washing by hand. After removing the solution, we recommend you rinse the tiled surface thoroughly.
- In the event that machines are used, we suggest that you finish off the job by hand in the harder to reach spots, such as the corners of the walls.

ORDINARY CLEANING AND CARE OF SURFACES

- For ordinary cleaning, simply wash with warm water and cloths and/or soft sponges. If necessary, neutral detergents can also be used. If you have non-neutral detergents, remember to test their effects on a piece of an unlaid tile or on a hidden part of the tiled surface.
- Abrasive cleaners should not be used on glossy and/or polished tiles; this kind of detergent can be used on tiles with matt surfaces though: in the event, you should still test the effects on a piece of an unlaid tile or on a hidden part of the tiled surface.
- We also advise against the use of soaps, waxes, or rinse aids.

- To remove traces of grease or oil on the surfaces, we suggest you use detergents with organic or alkaline solvents (pH< 9), rinsing properly at the end.
- In large areas, appropriate industrial washer-dryers can be used, taking care to finish off drying by hand where necessary.
- Abrasive tools (such as metal pads or rigid brushes) should not be used on tiled surfaces.
- After installation of the floor, it should be properly covered with suitable material in order to prevent tiles from damage or scratches because of on-site processing. It is also important not to drag heavy objects across the surface to avoid scratches.
