# Artwork from your memories

Gerard Muñoz

---

# Your memories are never just black and white

We convert your pictures into precious works of art

# Art by the numbers

**Make your photos even better than you remember them scientifically**

→ **Style Transfer**

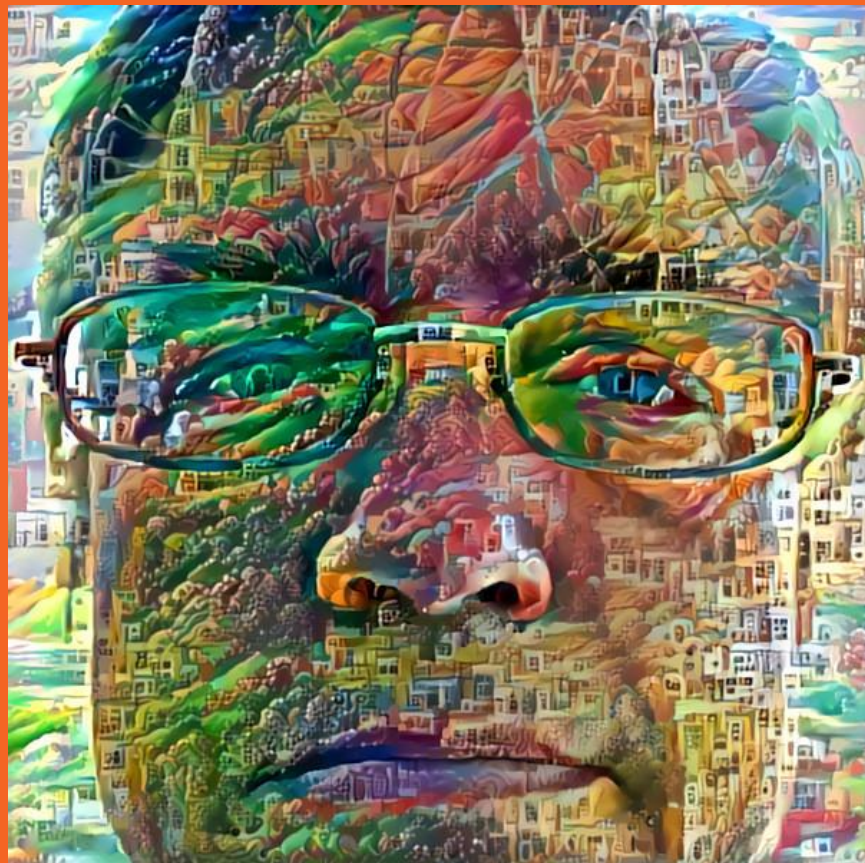

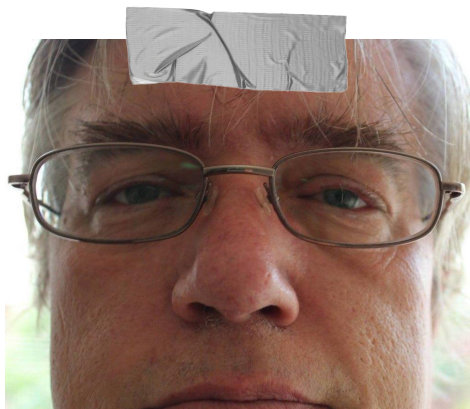

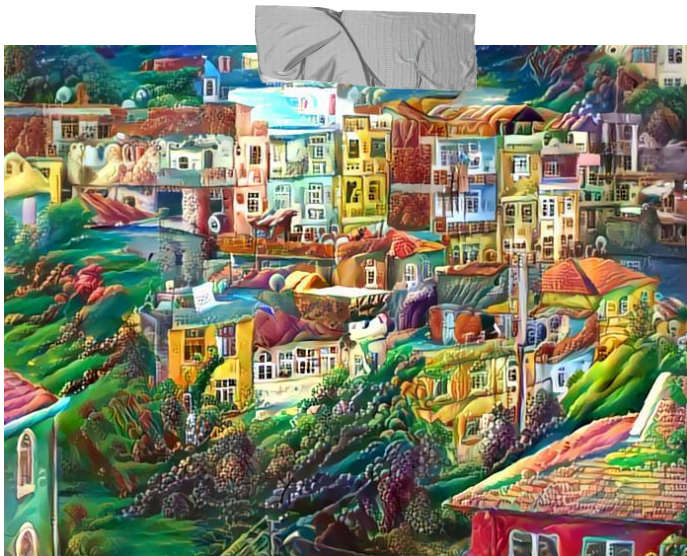

Take the style of one artwork and apply it a photograph creating an artistic and embellished photograph. The mathematics for this is openly available

→ **By the Numbers**

This is accomplished with machine learning which is at its core applied statistics,

Image analysis is an important sector of machine learning

Style transfer is it's carefree creative brother

---

# Give your memories substance

The block  
where your  
grandmother  
lives

Now it is a stained glass window.

# The Plan

High quality high resolution photos can be turned into art objects.

→ **To start**

We begin with the most economical canvas, a print and a beautiful custom frame to surround it.

→ **And then**

Once we make this medium profitable, we can continue to higher quality materials with significantly higher returns.

We can style photos correctly into any media imaginable

Mosaics, Stained Glass windows, embroidered and cloth art, etched glass, stone, and more.

## Textiles

Complex embroidery instructions can be handed to textile partners

---

# Mosaic

Inlaid furniture 3D printed  
mosaics

# We solve the basic problems first

## First Steps

We start by acquiring a print and framing shop with plans to route our product to it's production.

## Development tasks

- Build e-commerce system for online frame store
- Whitebox the e-commerce solution for other creators
- Build Style Transfer MVP
- Route style transfer images to online frame store

# The product design process

## Topline issues

- Rendering several options is system intensive
- People are known to submit bad pictures
- The refinement process is collaborative and expensive
- Will require ongoing yearly development funding
