

Did you miss this
critical Salesforce
security update?

(I almost did!)

⚠️ Salesforce enforces new security requirements in June 2026.

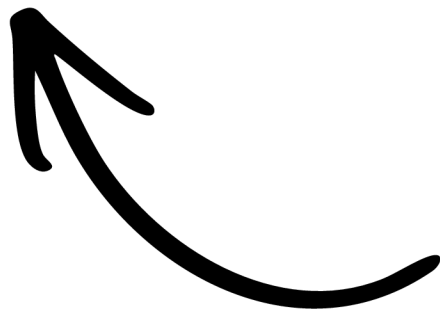

**The original banner I
almost ignored.**

**Phishing-Resistant MFA
Enforcement for Privileged Users,
Including Admins**

- **Sandboxes:** Starting **June 22, 2026**, staggered over approximately 7 days
- **Production:** Starting **July 1, 2026**, staggered over approximately 30 days

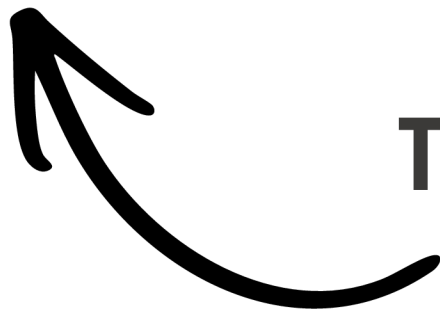

**The change that really
caught my eye
(especially those dates!)**

Source: <https://help.salesforce.com/s/articleView?id=005321563&type=1>

Salesforce is enforcing **phishing-resistant Multi-Factor Authentication (MFA)** for all users with the **System Administrator profile, Modify All Data, View All Data, Customize Application, or Author Apex** permissions). This applies to direct UI logins and Single-Sign-On (SSO) logins, across both production and sandbox orgs.

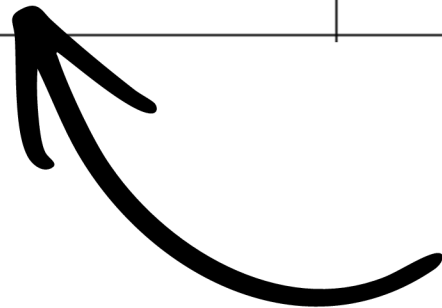

The nitty-gritty details

Source: <https://help.salesforce.com/s/articleView?id=005321563&type=1>

Tier	Direct Salesforce Login (Salesforce MFA verifiers)	SSO Authentication Method Reference (AMR) Signals	SSO Authentication Context Class Reference (ACR) Signals	Result
Phishing-Resistant MFA	Security Keys (WebAuthn), Built-in Authenticators (Touch ID, Windows Hello), Admin-Generated Temporary Verification Codes	cert, face, fido, fido2, fpt, hwk, iris, passkey, phr, pin, pki, pop, pwlesspasskey, retina, sc, smartcard, swk, tlsclient, vbm, wia, x509	fido, fido2, fpt, hwk, passkey, phr, pki, pwlesspasskey, retina, smartcard, swk, tlsclient, vbm, wia, x509	Successful login.

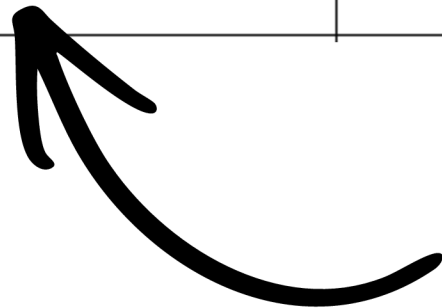

The phishing-resistant MFA required otherwise log-in will be blocked.

solution

The deadline is coming faster than you think. Be prepared **BEFORE** July 1st for these changes or risk all System admins having their log-ins blocked.
