

## TOP HAT?

Many leading departments, both paid and volunteer, prefer the helmet above—the light yet strong aluminum “Senator”. But whatever the preference—aluminum, leather or plastic—it’s tops in firemen’s headgear if it comes from Cairns.

The “Senator” provides a typical example of the workmanship and precise attention to detail that go into all Cairns helmets. Made from a single piece of aluminum — and featuring the graceful and practical lines that are a Cairns tradition—this helmet is unexcelled in impact performance and resistance to heat, chemicals and sunlight. It is built for a lifetime of hard use and is low in initial cost. It features the famed insulating Cairns Cushion Lining, either made to exact head size or adjustable. A drop brim style is also available.

Safety-type chinstraps can be added, particularly for personnel frequently assigned to breathing apparatus or other specialized duties.

There are eleven specialized models of Cairns helmets to meet every preference and every budget. And each reflects the quality, craftsmanship and engineering skills gained from 130 years of producing helmets for firemen here and abroad.

For full information on Cairns helmets and other firemen’s equipment, write Cairns & Brother, Inc., Allwood, Clifton, New Jersey for completely illustrated Catalog.
