

Utility-Scale Solar Lowering Energy Costs... Nope!

Crazy thought... maybe grassroots opposition groups weren't the ones spreading misinformation about renewables lowering costs?!

[Excerpt from a PV Magazine article dated 11.08.24:](#)

Are California's electricity prices rising because customers are installing solar panels?

"First, stop pointing the finger at the solar cost shift as creating high electric rates. Instead, identify the role being played by inflated utility overhead costs, managerial inefficiencies and excessive executive compensation. California's rates are now almost three times the US average. They have been higher than the US average since 1979, long before rooftop solar panels arrived on the scene."

Someone's chickens are coming home to roost!
