B. Reading Comprehension (16 Marks)

Read the following passage carefully, then answer the questions below:

From far out in space, Earth looks like a blue ball. Since water covers three-fourths of the Earth's surface, blue is the colour we see most. The continents look brown, like small islands floating in the huge, blue sea. White clouds wrap around the Earth like a light cover. The Earth is shaped like a **sphere**, or a ball. It would take years to walk around the whole planet.

A spaceship can fly around the widest part of the sphere in only 90 minutes. Even though spaceships have travelled to the Moon, people cannot visit the Moon without special suits. The Moon has no air or water. Plants and animals can't live there either. Astronauts first landed on the Moon in 1969. After that, there were six more trips to the Moon. **They** brought back Moon rocks, which scientists are still studying.

The Sun is the closest star to Earth. A star is a hot ball of burning gas. The Sun looks very big. But the Sun is just a medium-sized star. The burning gases from the Sun are so hot that they warm the Earth. Even though the Sun is always glowing, the night here on Earth is dark. That's because the Earth turns around, every 24 hours. During the day, the Earth faces the Sun. Then we see light. During the night, the Earth turns away from the Sun. Then it faces the darkness of space.
