www.sibaljo.com

Objectives

- To provide solutions and counseling to establishments and individuals in the vocational and technical fields through a scientific and empirical approach.
- To explore options and develop technological solutions for the concept of the profession in society in light of the best practices and world experiments.
- To reinforce the role of planning for professions and labor market requirements through examining the present situation to put down future plans to bridge the gaps and specify determinants and challenges it faces.
- To train human resources to qualify for vocational and technical sectors through training programs and outstanding consultations to keep pace with modern technology and quality standards of services and productive sectors that meet local and regional market needs.
- To provide employees in the vocational sector with creativity and pioneering competencies in different specializations and feasibility studies.
- To consolidate partnership and cooperation between the vocational and technically specialized trainer and the labor market

Who We Are

Sibal is a foundation that is concerned with studies of administrative, academic, and technological issues. It also cares for holding exhibitions, conferences, and seminars for the academic and vocational sectors, in addition to sectors of services and products. we hold a message for positive change, scientific research professionalism, and investigating reality by providing solutions through expertise, multiple parties, experts, consultants, academicians, and professionals who believe in active change that creates opportunities and alternatives for Sustainability.

Where to Start from

Through research services and specialized scientific studies, Sibal Amman determines and explains the status of the targeted situation to specify the needs and to exhibit weak aspects that can be addressed to achieve development via consultation procedures with the specialized concerned with the field. At this exploratory stage, the gaps are identified in the form of specific goals and targeted tool indicators in the sectors of education, training, and professional operating in accordance with a plan of priorities, implementation possibilities, and achievement requirements.

The second stage involves organizing and administering activities that help achieve the objectives of the stage as manifested in partnership, seminars, specialized meetings, providing needs, data, and teamwork of specialized technicians, in addition to follow-up and project evaluation activities, drafting the follow-up reports, besides specialized consultation and administration services.
