## **Machine Learning Engineer**

## Overview:

Design, build, and optimize machine learning systems for production environments.

## Responsibilities:

- Develop ML models for real-time or batch processing.
- Integrate models into applications or APIs.
- Monitor model performance and retrain as needed.

## **Qualifications:**

- Bachelor's in CS, AI, or related field.
- Strong coding (Python, Java) and ML experience.
- Knowledge of cloud ML services (AWS SageMaker, Azure ML, GCP AI).
