COMPOSTABLE PLASTICS NATURE'S PERFECT CHOICE

ABOUT US

Founded in 2008, Nandu Packaging is a leading innovator in sustainable packaging solutions. With a strong commitment to environmental responsibility, we specialize in manufacturing compostable polybags that offer durability, functionality, and eco-friendliness. Our mission is to provide high-quality, biodegradable packaging that meets international sustainability standards while catering to diverse industry needs. We take pride in delivering exceptional customer service, ensuring customized solutions for businesses looking to reduce their carbon footprint.

WHAT IS COMPOSTABLE POLYBAGS ?

Compostable polybags are environmentally friendly alternatives to conventional plastic bags, designed to decompose completely into natural elements without leaving toxic residues. These bags are made from renewable resources such as cornstarch and other biodegradable polymers. Unlike traditional plastic, compostable polybags break down under industrial or home composting conditions within months, significantly reducing environmental impact. They are an ideal solution for businesses seeking sustainable packaging options while adhering to global environmental regulations.

NANDU PACKAGING

INTRODUCING COMPOSTABLE POLYBAGS

At Nandu Packaging, we are dedicated to making a positive impact on the environment by offering compostable polybags. Our eco-friendly bags maintain the same strength and functionality as traditional plastic bags, yet they decompose naturally, leaving behind no harmful residues. By choosing our compostable bags, you contribute to a cleaner planet, reducing plastic waste and helping to create a more sustainable future for generations to come. We're proud to lead the way in providing durable, responsible packaging solutions that support the health of our environment.

COMPOSTABLE POLYBAGS ARE IDEAL FOR:

COMPOSTABLE POLYBAGS

PRODUCT & RETAIL PACKAGING

In the retail industry, packaging is essential for product protection, branding, and customer experience. However, traditional plastic packaging contributes to environmental pollution. Compostable polybags provide an eco-friendly alternative, ensuring sustainability without compromising quality.

NANDU PACKAGING

MADE FROM CORNSTARCH

Many global brands are shifting towards eco-conscious packaging to align with environmental regulations and consumer demand. Compostable polybags help businesses enhance their sustainability efforts. By choosing compostable polybags for shirt and garment packaging, businesses can protect their products while making a positive impact on the environment. It's a small change with a big difference for a cleaner, greener future!

CORNSTARCH-BASED COMPOSTABLE PLASTICS

Cornstarch-based compostable plastics are an eco-friendly alternative to conventional plastics, designed to break down naturally through biological processes such as bacterial and fungal decomposition. Unlike traditional plastics, which can persist in the environment for centuries, these plastics decompose into non-toxic components within a specific timeframe under the right composting conditions.
