- **BIS 6313 : Part 2 : 2022 – Pre Construction**
- **BIS 6313 : Part 3 : 2022 – Post Construction**

### Step 1: Drilling Holes in the Walls and Filling them with a Disinfectant

1. Estimated Time: 2 hours
2. Description: Our trained technicians will drill holes (approximately 10-12 mm in diameter) in the walls of the 2 BHK unit, focusing on areas where termite activity is suspected or evident. The holes will be drilled at a depth of about 5-6 inches, depending on the wall thickness.

3. Disinfectant Used: A proprietary blend of insecticides, including Premise (imidacloprid) from Bayer, will be injected into the holes to eliminate existing termite colonies and prevent future infestations.

### **Step 2: Treating all Holes with Chemicals to Stop Termite Breeding**

1. Estimated Time: 2 hours
2. Description: The drilled holes will be treated with a specialized chemical solution, Premise and Agenda from Envu/Bayer, to target termite breeding sites and prevent further infestation. This treatment will be applied to all holes, ensuring comprehensive coverage of the affected areas.

### **Step 3: Closing all Treated Holes with White Cement to Prevent Future Infestation**

1. Estimated Time: 2 hours
2. Description: After treating the holes, our technicians will seal them with white cement to prevent re-infestation and ensure the treated areas remain inaccessible to termites.

### **Step 4: Spraying Chemicals on Wooden Surfaces (Optional)**

1. Estimated Time: 1 hour (if required)
2. Description: In cases of severe termite infestation, our technicians may apply a specialized chemical spray to wooden surfaces, such as furniture, door frames, and window frames, to eliminate termites and prevent further damage.

**Estimated Total Time Required: 5-6 hours**

**Warranty Period: 1 year**

We offer a warranty period of 1 year, depending on the severity of the infestation and the treatment package chosen. Our warranty ensures that if termites are found in the treated areas during the warranty period, we will provide additional treatments at no extra cost.

#### **Chemicals Used:**

1. Premise (imidacloprid) from Bayer: A systemic insecticide that targets termite colonies and prevents future infestations.
2. Agenda (fipronil) from Bayer: A fast-acting insecticide that targets termite breeding sites and prevents further infestation.

#### **Additional Guidelines and Context:**

1. Before the treatment, please ensure that all furniture, curtains, and other obstructions are removed from the walls to facilitate easy access.
2. Our technicians will wear protective gear, including masks, gloves, and safety glasses, to ensure their safety during the treatment process.
3. The treatment is safe for humans and pets, but it is recommended to keep children and pets away from the treated areas for at least 2 hours after the treatment.
4. Regular inspections and monitoring are crucial to ensure the effectiveness of the treatment and prevent future infestations.

Please note that the estimated time required, and warranty period may vary depending on the specific requirements of your 2 BHK unit and the severity of the termite infestation. Our team will provide a detailed assessment and recommendation before commencing the treatment.

### **Terms and conditions**

1. The customer understands that our technicians have instructions not to handle the customer's property to avoid any inadvertent damage.
2. A representative of the customer should be present during the pest management treatment to remove and shift all articles as necessary.
