

Wood Borer Control Procedure for Residential Apartments

Offer discounted price INR 8/- per square feet. Market price INR 12/- per square feet.

* **Warranty Period: 1 year**

* **Free Service Voucher INR 1,000/- for next service.**

Step 1: Inspecting Wood for Signs of Infestation

Estimated Time: 2 hours

Description: Our trained technicians will inspect all wooden surfaces in the apartment for signs of Powderpost Beetle infestation, such as small exit holes and piles of fine powder (frass). This inspection will focus on bare, unfinished wood, which is most susceptible to infestation.

Step 2: Treating Infested Wood with Borate-Based Pesticides

Estimated Time: 2 hours

Description: Infested wood will be treated with a borate-based pesticide, such as BoraCare or Timbor. These products penetrate the wood and eliminate beetles inside, as well as those entering or exiting the surface. The pesticide will be mixed according to the label instructions and applied directly to the wood surface.

Step 3: Sanding and Varnishing Wooden Surfaces

Estimated Time: 2 hours

Description: To prevent future infestations, all bare wood surfaces will be sanded and varnished. This creates a protective barrier that prevents adult beetles from depositing their eggs in the wood.

Step 4: Fumigation (if necessary)

Estimated Time: 4 hours

Description: In cases of severe infestation, fumigation may be required. This involves filling the apartment with gaseous pesticides to suffocate or poison all pests within the area. Fumigation is a last resort and will be

used only if other methods prove unsuccessful. Fumigation needs license and authorized operator should perform it. **Absolute pest control service** currently does not hold license for fumigation.

Estimated Total Time Required: 6-10 hours

Warranty Period: 1 year

We offer a warranty period of 1 year, depending on the severity of the infestation and the treatment package chosen. Our warranty ensures that if Powderpost Beetles are found in the treated areas during the warranty period, we will provide additional treatments at no extra cost.

Chemicals Used:

- **BoraCare (or alternative):** A borate-based pesticide that targets beetles inside the wood and prevents future infestations.
- **Timbor (or alternative) :** Another borate-based pesticide effective against Powderpost Beetles.

Additional Guidelines and Context:

- Before the treatment, please ensure that all furniture, curtains, and other obstructions are removed from the wooden surfaces to facilitate easy access.
- Our technicians will wear protective gear, including masks, gloves, and safety glasses, to ensure their safety during the treatment process.
- The treatment is safe for humans and pets, but it is recommended to keep children and pets away from the treated areas for at least 2 hours after the treatment.
- Regular inspections and monitoring are crucial to ensure the effectiveness of the treatment and prevent future infestations.
- Please note that the estimated time required, and warranty period may vary depending on the specific requirements of your apartment and the severity of the infestation. Our team will provide a detailed assessment and recommendation before commencing the treatment.

Terms and conditions

1. The customer understands that our technicians have instructions not to handle the customer's property to avoid any inadvertent damage.
2. A representative of the customer should be present during the pest management treatment to remove and shift all articles as necessary.
