🎯 STRATEGIC PRODUCT LEADERSHIP

Technical Product Manager

Team
Triangle 3 – Technical Infrastructure & Launch Operations

Leadership Level
Cross-functional product leadership

Classification
Mission-Critical – Product Strategy & System Execution

⚡ STRATEGIC PRODUCT LEADERSHIP

This role requires exceptional product vision and technical depth to orchestrate complex, security-sensitive identity infrastructure while driving strategic product decisions that impact millions of users.

🚀 Role Overview

Serve as the strategic orchestrator for VeraLok's mission-critical identity infrastructure systems, transforming complex security-sensitive requirements into clear, actionable product roadmaps and technical specifications. You will bridge the gap between executive vision and engineering execution, ensuring seamless

delivery of high-trust identity solutions while maintaining the highest standards of security, compliance, and user experience across all product touchpoints.

🚀 Core Responsibilities

🗺️ Product Roadmap Strategy

Define and manage comprehensive product roadmaps for core identity infrastructure and user-facing trust modules, balancing technical debt, feature development, and strategic initiatives across multiple product lines.

📋 Requirements Translation

Transform complex regulatory, security, and user requirements into precise technical specifications, ensuring seamless communication between stakeholders and development teams.

⚡ Strategic Prioritization

Lead feature prioritization, bug triage, and technical debt management in close collaboration with engineering leads, balancing immediate needs with long-term strategic objectives.

🔄 Agile Leadership

Drive sprint planning, backlog grooming, and release coordination across multiple development streams, ensuring delivery excellence and timeline adherence.

🤝 Cross-Team Coordination

Interface seamlessly across mobile, backend, and cloud infrastructure teams to ensure roadmap integrity and prevent technical silos that could impact product delivery.

✅ Quality & Compliance

Partner with QA and compliance teams to develop comprehensive test case planning and risk analysis frameworks that maintain product quality while meeting regulatory requirements.

🎯 Strategic Alignment

Ensure technical delivery remains aligned with executive strategy and trust architecture goals, providing regular updates and strategic recommendations to leadership.

Key Competency Areas

Technical Leadership

API-based product development, infrastructure planning, DevOps integration

Security-First Mindset

Regulatory compliance, security requirements, risk assessment

Product Strategy

Roadmap planning, feature prioritization, market analysis

Cross-Functional Leadership

Team coordination, stakeholder management, executive communication

✓ Essential Qualifications

📊 3-5+ years of proven experience as a technical product manager, systems analyst, or product strategy lead

📊 Deep fluency in API-based product development, infrastructure planning, and DevOps environment management

📊 Demonstrated ability to drive technical clarity and product excellence in security-first or regulated environments

📊 Successful track record of shipping SaaS platforms or mobile-first applications at scale

📊 Strong project management expertise with proven cross-functional leadership capabilities

📊 Experience with agile methodologies, sprint planning, and release management processes

📊 Excellent communication skills with ability to translate technical concepts for diverse audiences

📊 Data-driven decision making with strong analytical and problem-solving abilities

➕ Preferred Qualifications

💡 Direct experience with identity verification systems, trust scoring algorithms, or fraud prevention platforms

💡 Background in compliance-heavy sectors including fintech, govtech, healthtech, or similar regulated industries

💡 Strong understanding of cloud infrastructure architectures and CI/CD workflow optimization

💡 Proven success managing products in remote, globally distributed team environments

💡 Experience with security frameworks, privacy regulations, and compliance reporting

💡 Technical background in software engineering or systems architecture

💡 MBA or advanced degree in product management, business, or technical field

💡 Experience with user research, UX design principles, and customer-centric product development
