Prolegomena	1
Prologue	7
1 Functorial Gauges and Adjunctions	23
1.1 The General Category-Theoretic Framework	23
1.2 The Physical Roots of Algebraic Models	28
1.3 Functorial Processes and Natural Transformations	33
1.4 Functorial Equivalence and Duality	38
1.5 Coordinate Systems and Gauges	44
1.6 Gauge Representability of Functorial Processes	51
1.7 Universal Gauges via Adjunctions	58
1.8 Functorial Gauges and Monads-Comonads	78
2 Canonical Functorial Relation of Representation	82
2.1 Functorial Coordinatization via Categories of Rings of Observables	82
2.2 Covariant Formulation of Measurement <i>à la</i> Yoneda-Grothendieck	86
2.3 Functorial Geometric Representation via Multi-layered State-Spaces	90
2.4 Semantics of Modules and Tensor Products	92
2.5 Comparison of the Functorial with the Classical Conception	98
2.6 The Geometric Semantics of the Spectrum Functor	100
2.7 Quantum Systems as Functorial Natural Systems	102

3	Localization and Observation in a Topos-Physical “Continuum”	108
3.1	The Notion of Physical “Continuum”	108
3.2	Localization Systems of Observables	112
3.3	Functorial Localization via Sheaves of Germs of Observables	116
3.4	Topos-Theoretic Relativization of Representability	128
3.5	Differential Ringed Spaces of States	140
3.6	Model Differential Observation and Locally Free Modules	152
3.7	The Notions of Grothendieck Topology and Site	159
3.8	Covering Families of Differential Ringed State-Spaces	167
4	Functorial Quantum Localization and Logical Classification	176
4.1	Functorial Localization in the Quantum Regime	176
4.2	Classical and Quantum Categories of Observable Algebras	183
4.3	Functor of States of a Quantum Observable Algebra	190
4.4	The Adjoint Functorial Classical-Quantum Canonical Relation	194
4.5	The Grothendieck Topology of Epimorphic Families	207
4.6	Commutative Algebraic Localization Systems of Quantum Observables	217
4.7	Sheaf-Theoretic Representation of Quantum Observable Algebras	221
4.8	Quantum Logic via Boolean Localization Systems	229
4.9	Topos-Theoretic Quantum Subobject Classifier	236
4.10	Criterion of Logical Truth in the Quantum Regime	249
5	Observable Dynamics via Connections	257
5.1	The Adjoint Pair of Extension/Restriction Functors	257
5.2	The Universal Object of Differential 1-Forms	260
5.3	The Notion of Connection	265
5.4	The Algebraic De Rham Complex and the Notion of Curvature	270
5.5	The Extension/Restriction of Scalars Monad-Comonad Pair	272

5.6	Categorical Monadic Reformulation of Connections	276
5.7	Algebraic General Theory of Relativity	279
6	Functorial Physical Theories of Dynamics	288
6.1	Conceptual Analysis of Basic Principles	288
6.2	Sheaf-Theoretic Field Dynamics via Abstract Differential Geometry . . .	295
6.3	Sheaf-Theoretic Field Dynamics of Differential Spaces	305
6.4	Functorial Quantum General Relativistic Dynamics	333
	Epilogue	351
