

Female Adaptor - A Our A Type Female Adapter Coupler are designed and manufactured by the experts using premium quality raw material, procured from trusted vendors of the market. Our professionals ensure that only defect-free range is delivered at the customers' end within the promised time.

A-Type Adaptor

Male Coupler - B Male Coupler B is also known as Female Coupler with Male threads. On the one side these Couplers are having two levers on its sides to easily Lock or Unlock the Adaptor or Plug. These type of Couplers are manufactured with End threading in BSP (M), BSPT (M), NPT (M) threads or can also be manufactured in welding type fittings.

B-Type Male Coupler

Hose Coupler - C Type C stainless steel camlock couplers - Female coupler by hose tail, are normally used with Type E, A, F and DP (Dust Plugs) of the same size. Available in 1" to 4". Stainless steel coupling consists of two components - coupler and adapter. Insert the adaptor into the coupler and when the adaptor contact with the sealing gaskets, put down the arms.

C-Hose Camlock Coupler

Female Adaptor – D Our Quick Release Coupling D Type Female Socket Product is Developed by the experts making use of advanced technologies and qualitative raw material, these are in compliance with the industry standards. These quick release couplings are widely used where fluids are transferred by pipes or hoses like fertilizers, mining and chemicals. We are one of the leading suppliers, distributor & exporter of D Type Female Socket. Available in Different Sizes.

D-Female Adaptor

Hose Adaptor – E Stainless steel camlock adapter Type E - Male Adaptor by Hose Tail, is typically used with Type C, B, D and Dust Cap couplers of the identical size. Heavy duty stainless steel camlocks connects the hose to the tank, pump or other equipment quickly and safely. Stainless steel quick hose couplings are ideal for chemicals, coolants, hydraulic oils, salt water and other corrosive materials. In food or sanitary applications, stainless steel cam lock is always the first option for it will not contaminate the media to be carried.

E-Hose Adaptor

Male Adaptor – F Type F Stainless steel camlock adaptors - male adaptor by male thread, fit into any female couplers including Type C, D, B & DC (Dust Cap). Quick hose camlock coupling can finish sealing in a snap without any requirement of tools. Stretch the arms of the coupler, and then insert the adapter into the coupler until contact with the gasket. The whole process of cam & groove connection will last several seconds. Available from 1" to 4" through 6" is interchangeable.

F-Male Adaptor

Dust Cap – DC Stainless steel camlock Coupler DC are typically used with Type A, E & F adapters to seal the end of the connection. Stainless steel 316 cam & groove couplings are ideal for harsh applications such as salt water, various chemicals & liquids that have strict requirement of sanitary. Among all the camlock couplings, stainless steel hose coupling is the superior one in durability and performance although its price is a little expensive. DC-Dust Cap

Dust Plug – DP Stainless steel camlock male end adapter Part DP is designed for usage with Type B, C & D couplers to seal the end of the connection. Stainless steel cam & groove fittings provide a quick connect/disconnect hose coupling to save your time. Made of stainless steel 316, this kind of hose coupling has excellent corrosion resistance against chemicals, hydraulic oils & salt water. It is especially ideal for food or sanitary environments. Always make sure the gasket material is compatible with the media.

DP-Dust Plug
