1. Fabrication and Welding Services

Fabrication and welding are key for **cargo loading systems, cell guide repairs, steel structures, gangways, sheds, and aluminum works**. These processes ensure strong, durable frameworks and restore structural integrity. Aluminum welding is crucial for lightweight, strong structures in marine and industrial applications. Skilled techniques ensure safety, stability, and quality, meeting industry standards.

2. Tanks and Hold Cleaning

Tank and hold cleaning involves safely **removing residues, sludge, and hazardous materials** from tanks and holds on vessels and in the oil and gas industry. Specialized techniques manage toxic or flammable substances, ensuring tanks are ready for new cargo or maintenance. The process follows strict safety protocols, including proper PPE, ventilation, and disposal methods to protect workers and prevent contamination.

3. Lashing, D-Ring, Stoppers, and Sea Fastening Works

Lashing, D-ring, stoppers, and sea fastening works ensure the securement of cargo on ships during transit. **Lashing involves using ropes, straps, or chains, while D-rings provide anchor points, and stoppers** prevent cargo movement. Sea fastenings stabilize cargo during rough seas. These tasks require strong materials and strict adherence to safety standards to prevent damage and ensure safe transport.

4. Hydraulic Works

Hydraulic works involve the installation, maintenance, and repair of hydraulic systems used in machinery and equipment. This includes **troubleshooting leaks, replacing hoses, and servicing pumps**. Proper installation and maintenance ensure safe, efficient system performance. Skilled technicians follow safety protocols to ensure reliable operation.

5. Waste Collection and Disposal

Waste disposal in the oil and gas industry and vessels involves safely handling and disposing of **Dangerous Goods (DG) and Non-Dangerous Goods (Non-DG)**. DG waste, including chemicals and oil sludge, requires special procedures for containment and transport, while Non-DG waste is managed to reduce environmental impact. Strict safety and local environmental protocols ensure compliant waste disposal, protecting the crew and the environment.

6. Mechanical Services

We provide comprehensive services for **boat engines, gearboxes, hydraulics, pumps, motors, electrical systems, fabrication, and piping**. Regular maintenance ensures optimal performance and reliability of all vessel systems, including custom fabrication and piping for fuel and fluid systems. Our skilled technicians follow industry standards and safety protocols to ensure efficient, safe operation of your vessel.
