About Us

“ Your Strategic Partner for National Telecommunications Project Implementation

Since 2015, we at "Intelligent Energy" have been a dedicated team of specialized engineers with deep expertise in executing strategic and service projects within the network infrastructure sector, focusing on the energy and telecommunications industries.

Our mission is to bridge the gap between the strategic objectives of our clients (in both the public and private sectors) and effective, on-the-ground execution.

We are focused on supporting companies and contractors to enhance their operational effectiveness and expand into new markets. We ensure the highest Return on Investment (ROI) in critical infrastructure projects while also studying the feasibility of localizing infrastructure network components to build a domestic industry.

Infrastructure Project Services

Wired and Wireless Telecommunication Networks

3- Distribution networks

- Network Design
- Implementation Oversight
- Vendor Evaluation and Selection
- Project Management
- Project Execution
- Procurement and Supply (in the absence of conflicting interests)

2- Metro networks

- Network Design
- Implementation Oversight
- Vendor Evaluation and Selection
- Project Management
- Project Execution
- Procurement and Supply (in the absence of conflicting interests)

1- Back Bone networks

- Implementation Oversight
- Vendor Evaluation and Selection
- Project Management
- Procurement and Supply (in the absence of conflicting interests)

Wired and Wireless Electricity Distribution Networks

- Underground Network Design
- Solar Energy System Design
(for Residential, Commercial, and Industrial use)
- Implementation Oversight
- Vendor Evaluation and Selection
- Project Management
- Solar Energy System Implementation
(for Residential, Commercial, and Industrial use)
- Procurement and Supply
(in the absence of conflicting interests)

Clean Water Networks and Recycling Systems

- Network Design
- Implementation Oversight
- Vendor Evaluation and Selection
- Project Management
- Solar Energy Solutions for Irrigation and Recycling

Supply Chain and Procurement Management & Quality Assurance

Supply Chain, Procurement, and Quality Assurance

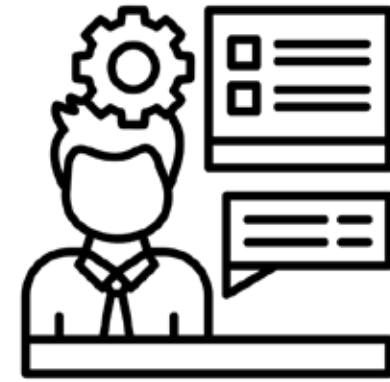

- **Selection and testing of equipment and materials used in the implementation of infrastructure networks.**
- **Vendor and Contractor Evaluation:** We conduct a meticulous technical and financial assessment to select the optimal implementation partners. This evaluation is based on client requirements, including materials quality, equipment quality, execution precision, implementation speed, and any other client-specified efficiency criteria.
- **Vendor Quality Audits and Acceptance Testing:** We offer pre-supply factory inspection and quality testing services to ensure full compliance with specifications. (Service available in Egypt and Saudi Arabia).
- **Development of digital and technological platforms to ensure the quality of project execution and post-implementation asset operation and management.**

(Install & Training)

Training and Capacity Building

Management Training

1. Project Management
2. Supply Chain Management
3. Business Development
Operations Management
4. Industry Localization and Asset
ROI Maximization
5. Specialized E-Marketing for
Increased Customer Satisfaction
and Asset ROI Maximization

Technical Training

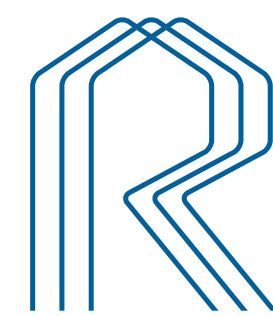

1. Fiber Optic Network Design
2. Fiber Optic Network Implementation
3. Design of Wired and Wireless Solar
Energy Networks (Commercial,
Industrial & Residential)
4. Implementation of Wired and
Wireless Solar Energy Networks
(Commercial, Industrial & Residential)
5. Digital Content Enablement for
Infrastructure Network Implementation
and Management
6. Mobile Applications and
Programming

Training

1. Production Systems and
Operations Management
2. Specialized Industrial
Processes
3. Reverse Engineering, Design,
and Industrial Feasibility Studies
