

1. DETECT Package

Services Included:

Target Clients:

Small businesses, startups, or organizations with limited budgets.

- **NIST Cybersecurity Framework (1.1) Risk Assessment**
National Institute of Standards and Technology risk assessment, establishes the gaps between “best practices” and current business practices.
- **Vulnerability Scan:** Basic scanning and identification of potential vulnerabilities in the network, systems, and applications.
- **Remediation Recommendations:** Report of recommended actions to be taken to resolve risks present in findings from Risk Assessment.

2. TRANSFORM Package

Services Included:

Target Clients:

Medium-sized businesses or organizations looking to enhance their security posture.

- **NIST Cybersecurity Framework (2.0) Risk Assessment:**
Detailed evaluation of security risks, including internal and external threats.
- **Prioritized Remediation Plan:** Detailed report of findings and recommendations prioritized by the level of risk the gap represents to your business.
- **Vulnerability Scan:** Complete network scan (up to 255 network-attached devices), which reveals known vulnerabilities in hardware and software. Vulnerability management is critical for securing systems.
- **Penetration Test:** Penetration testing is another critical element of vulnerability management, and it involves the systematic testing of network defenses. The results of the test are used to update firewall rules etc.
- **Cybersecurity Architecture Review:** The tests and analysis reveal the inventory of your cybersecurity posture, and as a value add we make recommendations on products to consolidate or retire.

3. PROTECT Package

Services Included:

Target Clients:

Large enterprises, high-risk industries, or organizations with critical infrastructure.

- **NIST Cybersecurity Framework (2.0) Risk Assessment:** Detailed evaluation of security risks, including internal and external threats.
- **Prioritized Remediation Plan:** Detailed report of findings and recommendations prioritized by the level of risk the gap represents to your business.
- **Vulnerability Scan:** Complete network scan (up to 255 network-attached devices), which reveals known vulnerabilities in hardware and software. Vulnerability management is critical for securing systems.
- **Penetration Test:** Penetration testing is another critical element of vulnerability management, and it involves the systematic testing of network defenses. The results of the test are used to update firewall rules etc.
- **Cybersecurity Architecture Review:** The tests and analysis reveal the inventory of your cybersecurity posture, and as a value add we make recommendations on products to consolidate or retire.
- **24/7 Security Operations Center (SOC):** Continuous monitoring and response to security incidents with a dedicated SOC team.
- **Bi-Annual Security Audits:** Comprehensive security audits conducted twice a year with detailed reports and strategic recommendations.
- **Compliance Management:** Assistance with compliance requirements and audits (e.g., GDPR, HIPAA, PCI-DSS).
- **Virtual CIO /CISO:** Delivering over 50 years of I.T. Management experience with companies like MITRE, HP, and VMware sets us apart as an expert Advisor.

4. Other Cybersecurity Services
