

GLYCOPROTEINS

The mRNA shots, Pfizer and Moderna, are actually mRNA instruction shots. They are actually telling your cells to make spike proteins. Now, you can keep calling them spike proteins all you want, but the spike proteins were identified to be what are called *glycoproteins*. By nature, all venom proteins are glycoproteins. French researchers in April of 2020 confirmed with genetic testing that the spike protein's gene sequence, every nucleic acid is perfectly identical to *cobra toxin* of king cobra venom and krait snake venom called *Bungarotoxin*. They said each of these are neurotoxins.

We know snake venoms cause neurotoxicity. They also cause *hemo* (blood) *toxicity*. They also cause what's called *cytotoxicity*. This means venoms will destroy all and any cells in the human body. That includes red blood cells, muscle cells, nerve cells, spleen cells, liver cells, kidney cells, and intestinal cells. This is what spike proteins and what venoms are designed to do. They're designed to create harm.

For decades, they've been creating antiviral vaccines from venoms of all creatures around the world, and they are now instituting what they've been creating for decades. They are either injecting you with the spike proteins, which really are just spike glycoproteins, identical to snake venoms and other venoms, or they're instructing your cells, with the instruction called mRNA, to make spike proteins.

So, if venom is bad for you, just imagine what venom in the body does. It is identical to what these COVID-19 shots are doing. But if they're instructing your cells to make venom, small amounts of venom every day, you can see how there's going to be a long-term reaction in a whole lot of healthy people as their body makes more and more of these toxic spike proteins that are neurotoxic, blood toxic, and cell toxic.

You're going to see every single disease process you can imagine—brain tumors like glioblastomas, multiple sclerosis, dementia leading to Alzheimer's, worsening Alzheimer's. All mood disorders, schizophrenia, bipolarism, manic depression, depression, you name it, obsessive compulsive disorder. You're going to see massive amounts of all of this. You're also going to see seizures. You'll also see other neurotoxic effects which are paralytic.

These are all published side effects of the COVID-19 spike proteins and the COVID-19 vaccine spike proteins. Venom's neurotoxins are only primarily designed to paralyze their prey. The first published side effect of the COVID-19 shots by the FDA, in October of 2020, 2 months before they released the shots, they had a meeting, and they showed a screen that had 22 different diseases these shots were going to cause. The very first one was Guillain-Barre syndrome, which is paralyzed leg, then a paralyzed arm, sometimes half of your faces. It looks like Bell's palsy. There have been numerous examples of people having parts of their body paralyzed, either temporarily or permanently, as a reaction to the COVID-19 shots.

The neurotoxic effects of these spike proteins are identical to the venom peptides found in all venomous creatures. They are designed solely to actually cause harm and injury, but there's this weird, twisted idea in medicine and in pharmakeia, that we can take poisons and toxins to treat an unhealthy person with to restore them back to health. Similar to someone with cancer, let's inject them with a really toxic substance called chemotherapy. Hopefully, it won't kill all of the good healthy cells at the same time we're killing the unhealthy cells, and maybe the patient can recover.

They're doing the same things with antiviral drug therapy right now. They've been mastering this for decades. They are convinced in the pharmaceutical world that venoms can actually bind to the same

receptors of your cells that viruses do, ACE2 receptors, nicotine receptors, and they say, as long as we can get enough venom into the human body with vaccines or drugs made from venom, they are homologous. This is what it states in all the research studies. Snake venom components are homologous to viruses, meaning they have the same evolutionary origin or they are identical or so similar, you can't really tell them apart.

So, they believe if they can actually get venoms on the outside of your cells' receptors, then the viruses floating around introduced to your body can't bind to the cell to move in and infect your cell because venom is sitting there. The only twisted notion about that is venom was evolutionarily designed or created by God to do one thing, protect the snake and kill its prey so it can eat it.

So, there are many concerns about the impact of these. When you get to the receptors that venoms target, it explains every immune deficiency reaction you're seeing with COVID-19 vaccine injuries. You're seeing the destruction of alpha interferon, tumor necrotic factor, toll-like receptors, all of which help control cancer growth in your body. Venoms target those and turn them off so you can't protect yourself from cancer spreading.

Also, T-cells, which are our antibodies that fight infections, have nicotinic acetylcholine receptors on every single one of them. Venom kills the T-cells by binding to those receptors, and we are seeing massive amounts of T-cell destruction and inability to fight future infections or current infections after the vaccines.

One of the things that's really nefarious is not only did scientists around the world say the origins of COVID were from snake and snake venom, not only were they saying it, once Bryan Ardis discovered that in Italy in June of 2020, they ran the blood, urine, and feces samples of all positive COVID-19 patients and negative COVID patients. They published their finding that they found 36 different animal venoms inside the blood and feces of all the COVID-19 patients, and they didn't find any venoms inside of the negative COVID-19 group, the control group.

Inside of that study was listed 15 different venoms from these weird snails I'd never heard of in the ocean called cone snails. They're called *conotoxins*. Then they also identified several king cobra venom neurotoxins called *alpha cobra toxin*, which is exactly what they found was the spike protein in France and what they discovered in China in January of 2020, the 1st month of the pandemic.

So, when Ardis figured out that they were isolating and finding these proteins from the venoms of cone snails, cobras, a whole bunch of snakes in COVID-19 patients, he wanted to know if they know that they can use venoms to cause illness that looks like a respiratory infection.

They actually published that when they introduce into the human body alpha conotoxins and alpha cobra toxin, the same thing you're finding in COVID-19 patients. When they introduce that into the human body injected inside of you, it crosses the blood-brain barrier, and when it does, first, it specifically targets *glial cells* and *astrocytes*, which are in the basal ganglia of the base of your brain, the brainstem.

They target C6 glial cells, and when the venom attached to those nicotine receptors, called *alpha-7 nicotinic acetylcholine receptors* in the glial part of the brain. When the venom hit those receptors and bound to them, they actually cause the glial part of the brain to quickly lay down new neurons. They call that *proliferation*, and they actually timed it. They wanted to know after 24 hours, 48 hours, 72 hours, how quickly is the body replicating new neurons when we introduce venom into the glial part of the brain? They proved that within 72 hours, they could create a glioblastoma, a brain tumor, with venoms.

Then in the abstract and in the conclusion of the study, it had one sentence. It said, "When we administered less than 1 milligram for every 2.2 pounds of body weight of nicotine, it had zero effect on the tumor or on the glial cell being proliferated." It didn't stop its growth. It didn't have any impact. That was the only statement.

Nicotine, when administered at less than 1 milligram per kilogram body weight, has no effect on the glial cells or the glioblastoma. If you just read the summary and the conclusion, you would've never known that they actually used another dose of nicotine and tested it. If we can create the tumor, what happens when we introduce nicotine at this dose and this dose? Let's publish the findings.

When they used less than 1 milligram per kilogram of nicotine, there was zero effect in the study. When they went above 1 milligram per kilogram of body weight, the entire glioblastoma dissolved in less than 72 hours, the whole thing. What's amazing is they found what they were looking for.
