From Concept to Commissioning—Your Trusted Partner in Water Management

Reliable

Innovative

Sustainable

## About us

Geopure Hydrowater India Pvt. Ltd. is a steadily-growing company in India's water and wastewater management industry. With a clear vision to address the water challenges of today and tomorrow, Geopure brings together advanced technology, sustainable practices, and unmatched expertise to deliver end-to-end water treatment solutions across industries.

From our inception, Geopure has focused on developing innovative solutions that are not only effective but also environmentally conscious. We understand that each client has unique requirements, and our mission is to meet these with precision and dedication, ensuring sustainable, efficient, and cost-effective water management for every project.

## Our Philosophy

At Geopure, we believe that the future of water lies in efficient, sustainable management. Our philosophy is built on three key pillars:

### Innovation and Excellence

We continuously integrate the latest technologies and industry best practices into our solutions, staying at the forefront of water treatment advancements.

Every project is approached with a commitment to excellence, with careful attention to quality, detail, and environmental impact.

### Holistic Approach

Geopure is a complete service provider for all wastewater treatment needs, handling every step from concept and design to daily operations and future upgrades.

We offer fully tailored solutions that address each stage of the wastewater lifecycle, enabling our clients to focus on their core operations with peace of mind.

### Customer - Centric Solutions

We work closely with our clients to understand their unique challenges and provide solutions that are both effective and practical.

Our customer-first approach ensures that we deliver value, reliability, and measurable results for every client, from small enterprises to large-scale industries..

# Our Service Offerings.....

At GeoPure HydroWater, we provide a complete range of services and solutions tailored to meet diverse water and wastewater treatment needs across municipal and industrial sectors. From early project planning to long-term operational support, our services are designed to maximize efficiency, sustainability, and regulatory compliance.

## Engineering, Procurement, and Construction (EPC)

GeoPure HydroWater specializes in end-to-end EPC services to deliver fully integrated, high-performance water treatment systems. Our EPC approach is centered on quality, timely execution, and safety, enabling us to provide optimized solutions that meet each project's unique demands.

**Feasibility Studies & Business Planning:** We assess site-specific requirements and environmental factors to develop cost-effective, reliable solutions tailored to your needs.

**Engineering & Design:** Our team of experts ensures the highest engineering standards are met, creating innovative designs that optimize resource usage and reduce operational costs.

**Procurement & Construction:** Leveraging a network of trusted suppliers, we procure top-grade equipment, followed by seamless construction that prioritizes quality and sustainability.

## Operation & Maintenance (O&M)

With a focus on operational efficiency, our O&M services provide ongoing support throughout the lifecycle of your plant. We work closely with you to ensure reliable operation, minimized downtime, and extended asset life. Our comprehensive O&M services include:

**Routine Maintenance:** Regular inspections, troubleshooting, and repair services to keep systems functioning at peak performance.

**Operational Optimization:** Advanced monitoring and data analysis to improve process efficiency, reduce energy consumption, and lower operating costs.

**Upgrades & Retrofitting:** We help future-proof your systems by integrating the latest technologies and upgrading equipment as needed.

## Advanced Treatment Solutions

GeoPure HydroWater offers a variety of advanced treatment solutions to address the complex challenges of industrial and municipal wastewater management. Our technologies ensure compliance with stringent regulations while supporting sustainability goals:

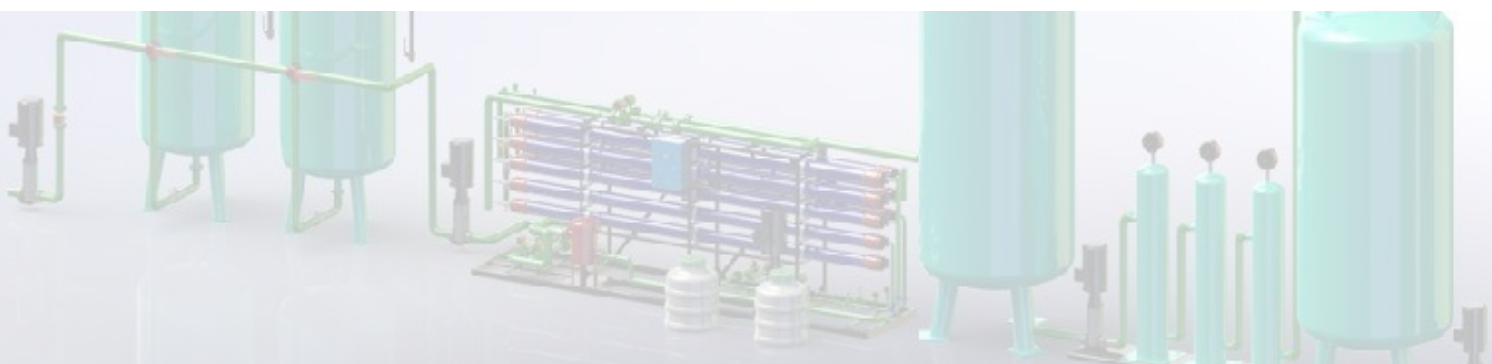

**Zero Liquid Discharge (ZLD):** Complete wastewater recovery systems that eliminate liquid waste and maximize water reuse.

**Membrane Filtration:** Using technologies such as Reverse Osmosis (RO), Ultrafiltration (UF), and Microfiltration (MF), we provide efficient contaminant removal solutions.

**Biological Treatment Systems:** Employing methods like the Membrane Bioreactor (MBR) and Sequencing Batch Reactor (SBR), our biological systems efficiently treat organic and chemical waste.

## Digital Solutions for Smart Water Management

Our smart water management systems combine cutting-edge digital tools with water treatment expertise to enhance system efficiency and data transparency:

**SCADA Integration:** Real-time monitoring and control systems to improve plant performance, optimize resource use, and provide actionable insights.

**Predictive Maintenance:** AI-driven analytics to predict potential issues and reduce unplanned downtime.

**Data Analytics & Reporting:** Comprehensive data collection and analysis for regulatory compliance, operational efficiency, and environmental impact assessment.

“When you look at advanced manufacturing and the way technology is changing, we’re requiring more, higher volumes of ultrapure water.”

# Why choose us?

## Innovative Technology

Leveraging advanced systems like ZLD and smart water management for efficiency and performance.

## End-to-End Support

From planning to ongoing maintenance, we provide full-service support to ensure reliability and client satisfaction.

## Customized Solutions

We tailor each project to align with your unique requirements and budget, ensuring optimal outcomes.

## Eco-Conscious Practices

Our solutions minimize environmental impact, promoting sustainability while reducing costs.

## Industries we serve

We offer specialized water treatment solutions for sectors including municipal water reuse, industrial parks, food & beverage, oil & gas, textile & leather, power generation, and automotive, focusing on sustainability, efficiency, and compliance.
