

Camp Shumla: Protecting the Pecos River High Bridge (41VV1928)

Tom Ashmore, Kinley Coyan, C.A. Maedgen

West Texas Archeological Society

March 2025 (updated Nov 2025)

Abstract

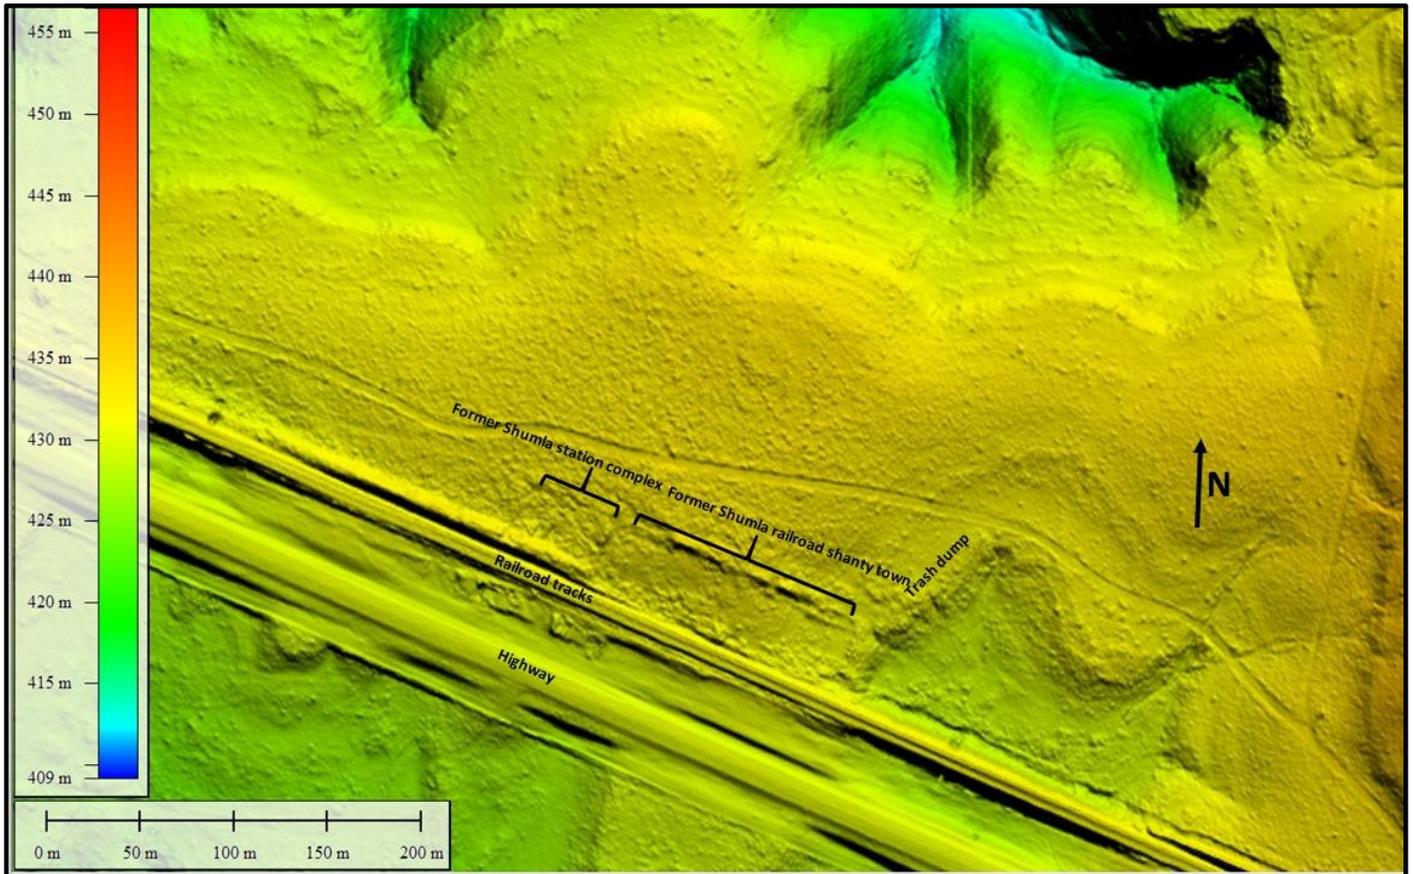

This report provides an archaeological examination of a former infantry and cavalry camp, as well as a WWII Civil Air Patrol emergency airstrip located near the Pecos River Railroad High Bridge and adjacent to the Shumla Railroad Depot. This camp has never been reported on. It was a multi-period camp, spanning the Mexican Revolutionary War period, World War I, and World War II. It was a known stopping point for large military units moving along the border because of the water source from the railroad depot. However, for units continuing on their road march, these were short watering rest stops. The military camping areas for larger units were 15 miles east at Comstock or 10 miles west at Langtry. This was a camp used by infantry units to guard the Pecos River Railroad High Bridge and a rest camp for cavalry patrols searching for attempts at border crossings or sabotage of the Pecos Railroad High Bridge. There was no official name for this camp. So, we are calling it Camp Shumla, after the adjacent railroad depot.

Acknowledgments

We took this project on due, in part, to original reconnaissance work done by the esteemed Texas archeologist and former landowner, Elton R. Prewitt. His ground reconnaissance notes were passed on to the current landowner and WTAS member, Peter Sprouse, who then passed them to us. Prewitt's insights were intriguing, but unfinished. Since following up, we found that although his archeological background was not historic military archeology, his insights were very much on target, and this is truly a worthwhile historical site to add to Texas military history.

History

The Southern Pacific railroad line running along the southern border was vital for moving military men and equipment between the U.S. east and west coasts, and especially from San Antonio to El Paso in Texas. During tense times, all the bridges were considered prime targets for saboteurs. However, the most important of these was the Pecos River Railroad High Bridge, at one time the highest bridge in the United States.

LIDAR image of former station area and Shumla bulldozed shanty town area

Mexican Revolutionary Period

The earliest record in our research of military units defending the Pecos River Railroad High Bridge is 1911. In early 1911, Mexico was being drawn into political and social chaos that threatened to spill over the U.S. border. The Texas Congress appealed to the governor for army protection along the border. The Texas Department Commander gave the initial mission to San Antonio's 3rd Cavalry Regiment and Fort Clark's 23rd Infantry Regiment. Most units were sent to the Big Bend district. However, the 23rd Infantry's K Company and 3rd Cavalry Regiment's D Troop deployed to protect the High Bridge. According to a report to the Adjutant General of the Army, K Company deployed 56 men and two wagons to guard the High Bridge. Third Cavalry's D Troop patrolled between Langtry and Sycamore Creek, east of Del Rio. There were four patrol areas, two of which centered in the area of the Shumla railroad siding. (Appendix D)

Mexican government troops attacked a detachment of the 10th Cavalry. Tensions were high, not only in Mexico but all along the border.

In April 1916, post returns indicate that the 19th Infantry Regiment was stationed at Camp Del Rio, Texas. Companies M and K of the 19th Infantry Regiment were in a rotation guarding the Pecos River High Bridge. (Appendix B)

In June 1916, the 14th Cavalry Regiment moved from Fort Clark to Camp Del Rio. (Appendix A). At the same time, Company H of the 19th Infantry also arrived at Camp Del Rio to plus up the existing infantry units. At the same time, a detachment of the 20th Coastal Artillery Corps transferred into Fort Clark. (Appendix C) At that time, coastal artillery companies were coming into the region from all around the U.S. to reinforce bridge protection along the rail line. Although further records are missing, the 20th Company Coastal Artillery Detachment likely made its way to the High Bridge to increase defenses while the 19th Infantry Regiment continued guard duties.

The 14th Cavalry Regiment from Fort Clark conducted border patrol duties throughout the entire region. This is evidenced by the report of an attack at Glenn Springs in the Big Bend region by Mexican followers of Poncho Villa. Mexican bandits attacked a small store and a candelilla wax factory in early May 1916. At the time, candelilla wax was the primary waterproofing ingredient for tents and considered essential to the military. Nine 14th Cavalry soldiers were at Glenn Springs, three of whom were killed during a firefight with the bandits. Colonel Frederick Sibley, commander of the 14th Cavalry Regiment, went by train with his Headquarters Troop, Troops K, H, and the Machine Gun Troop from Fort Clark to Marathon, Texas, in order to mount a punitive expedition against the attackers and recover two abducted Americans. Two Troops of the 8th Cavalry Regiment preceded the 14th Cavalry Regiment in Mexico.

The 14th Cavalry Regiment entered Mexico on May 16. The expedition successfully recovered the Americans and returned to the United States on May 21st. They then proceeded to complete a transfer to Camp Del Rio (later renamed Camp Michie) and to resume their border patrol mission and Pecos River High Bridge protection. (Appendix C)

World War One

In January 1917, the Mexican crisis was declared over. The military probably departed from their Shumla camp around that time. However, on April 4th, 1917, WWI erupted for the United States as it declared war on Germany. The Railroad High Bridge was once again considered under threat. The 14th Cavalry and 19th Infantry were again sent to patrol and protect the bridge. (Postal Society Journal) The war ended November 1918, but 14th Cav units patrolled the border and protected the High Bridge until 1919. (14th Cav)

Post World War One

Although the threat to the bridges may have been concluded after the war, military movement along the Rio Grande continued. In most cases this was for readjustments in the garrisons along the border area. Most likely troops continued to stop at the Shumla Railroad Depot, if just for rest and water.

Two of these movements can be found in photographs of units crossing the Pecos River in 1923 and 1929.

World War Two

The Pecos High Bridge was also protected during the World War Two. However, the troops were headquartered out of Houston. This was probably the 8th Regiment of the Texas State Guard, which stood up in February 1941. (8th Regiment) According to Del Rio resident and former railroad employee Bonney Vineyard, “As many as seventy-five or a hundred army men lived in barracks in a small camp near the bridge. Machine gun nests were placed at each end as well as under the bridge. Around the bridge at strategic points were heavy gun emplacements, mostly anti-aircraft.”

Satellite imagery reveals a barracks foundations near a 1922-constructed railroad depot the east side of the Pecos River. This construction is a typical military compound design. A security fence line can be seen in the images.

Cavalry patrols continued from at least 1938 to 1942. The 112th Cavalry Regiment relieved the 5th Cavalry Regiment at Fort Clark in February 1941 and patrolled from Del Rio from December 1941 to July 1942, when it was shipped overseas. (Scribner) On February 17, 1942, outposts of the 112th fired on an unidentified airplane flying northeast over the Pecos High Bridge. (Ragsdale) It is highly likely Camp Shumla continued to be used as a mid-point cavalry camp during this time.

Former tracks, depot, and military barracks compound on east side of Pecos River (Google Earth)

1929 Army Air Corps Photo of Pecos River Railroad High Bridge (1922 depot in upper right of photo)

Former WWII military barracks compound on the east side of Pecos River (Google Earth)

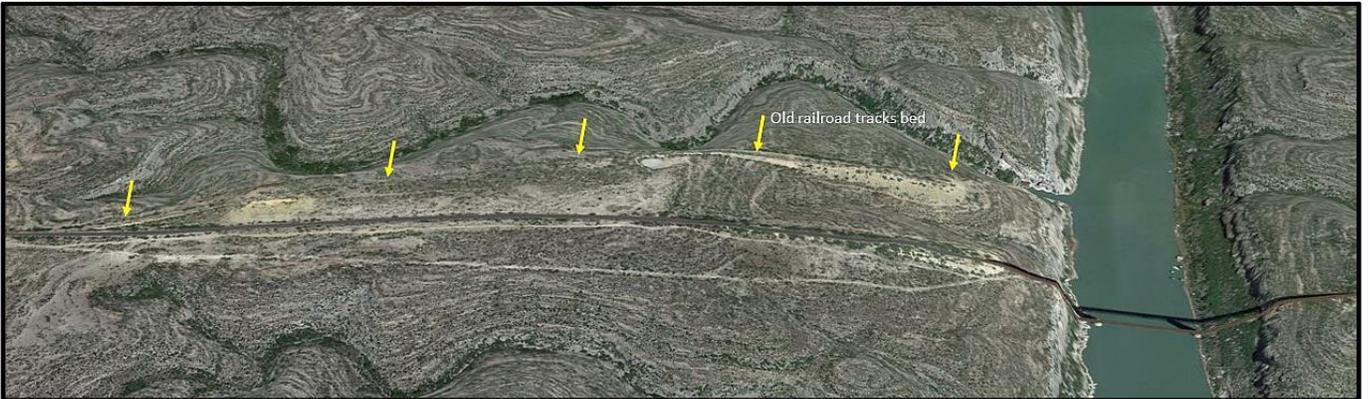

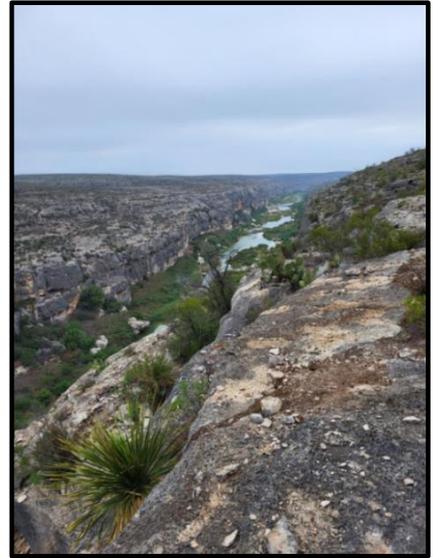

Terrain

Before the 1922 railroad depot construction on the east side of the river, the west side location was the most convenient camp area. Units could receive supplies via the Shumla Railroad Depot, there was flat terrain for camping, they could take advantage of the transportation to and from the home unit, and it was a source of clean water. It is three miles from the Pecos River High Bridge.

The area is a hardscrabble desert covered with greasewood, prickly pear, and mesquite. However, it was a relatively open area of level ground at the time. It appears that the combined infantry and cavalry camps used about four acres. This is in addition to the area occupied by railroad and civilian personnel that had grown around the siding area, nicknamed 'Shumla Town.'

The Rio Grande River is 0.7 miles due south. The High Bridge is 2.75 miles east of this site. The bridge is where the Pecos River runs through a 300-foot deep gorge and down into the Rio Grande River.

The railroad ran the same track bed as today to within just under a mile west of the river, where the old railroad bed deviated from the current one, making the old bridge about 400 feet north of the current bridge.

Old bed and new tracks on west side of Pecos River (Google Earth)

“Prosperity Special Crossing of the Pecos River, June 24, 1922”

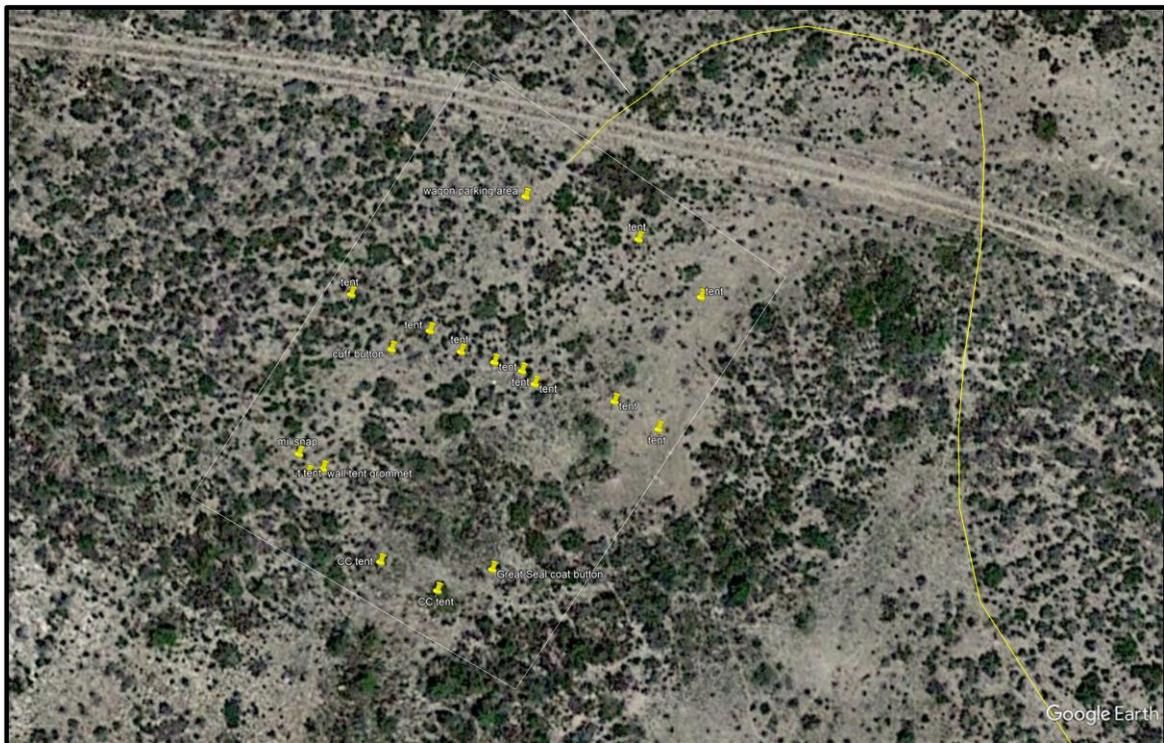

Camp Layout

The camp was divided into two areas: an infantry area and a cavalry area.

Infantry Area: The infantry area is close to the railroad tracks. It consisted of a commanding officer's and his lieutenant's tents area, separated from the enlisted row of tents. These tent spaces sit at the head of the camp area and in front of a line of 10 additional tent spaces, running east to west. Tent spaces can be identified and measured by the large rocks that helped to hold down the tent ropes in the wind. Additionally, multiple railroad spikes were used as tent stakes. Although the area is heavily trashed, two in-ground artifacts found are able to point to timeframe. These two buttons (see artifacts section) indicate this was likely the camp for the infantry during the Mexican Revolutionary and WWI periods.

The 10 tent squares generally measure 10 X 12 feet, indicating these were probably small wall tents of 8 X 10 feet. This size tent would accommodate three men per tent and indicates a semi-permanent camp. The officer's wall tents were likely the larger 10 X 12 feet. The total area for the command tent space is 15 X 25 feet, giving him extra area around the tent. Further out in front of the line of tents are two more tent spaces. Generally, a company consisted of a captain, two lieutenants, a first sergeant, and several sergeants and corporals to lead the rest of the squads and platoons. Additional men at this camp would traditionally consist of a supply sergeant, mess sergeant, blacksmith/saddler, bugler, cooks, medical assistant, and wagoners. The rest would be privates doing general labor and guard duty. More tents were probably set up that are no longer be defined.

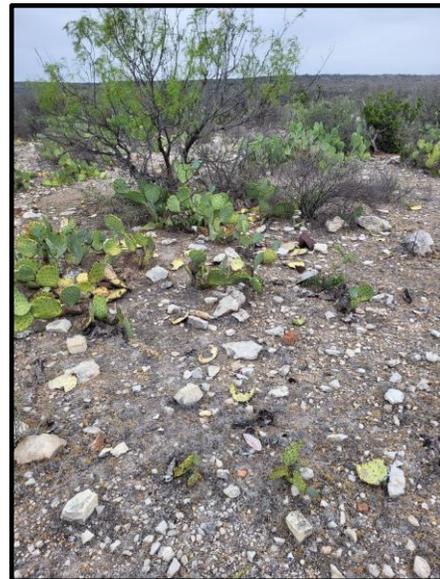

The infantry area encompasses just under one acre. In the northwest corner, satellite imagery reveals a break in the vegetation, creating an unnatural 60 x 60-foot X-pattern. This would be the area where wagons were parked.

**Camp Shumla Infantry Area and former Shumla Town (Google Earth)
(Wagon parking X-pattern in upper left corner, 'Shumla Town' area in lower left)**

Example of tent site remains

Probable commander's tent site

This camp area borders a trash dump on its east side. Everyone used it over the many years, including the railroad construction crews, railroad personnel, military camps, and the occupants of ‘Shumla Town.’ It sits in a shallow draw next to the railroad tracks, adjacent to the shanty town that grew up from the Shumla Railroad Siding. The remnants of Shumla Town can be seen in the left light-colored area in the Google Earth imagery. This area was bulldozed at some point, which made the distinct impression seen in the image.

Trash Dump

Two periods of can trash (left 20th century, right 1880s)

Cavalry Area: The cavalry area is separated from the infantry area. It is north of the infantry area and across a current ranch road. It covers approximately seven acres. It is further divided into two camp areas that appear to be separate periods of time.

Our research supports that this entire camp area was a logistical mid-way stopping point for cavalry patrols during the WWI, pre-WWII, and most likely up to 1942, when the remaining cavalry units were shipped overseas. Although it had no permanency, it was likely a stopping point and resting place for multiple days at a time before continuing either west or east. The camp highlighted by yellow boundary in imagery was all pre-WWI and WWI. It was probably reused many times.

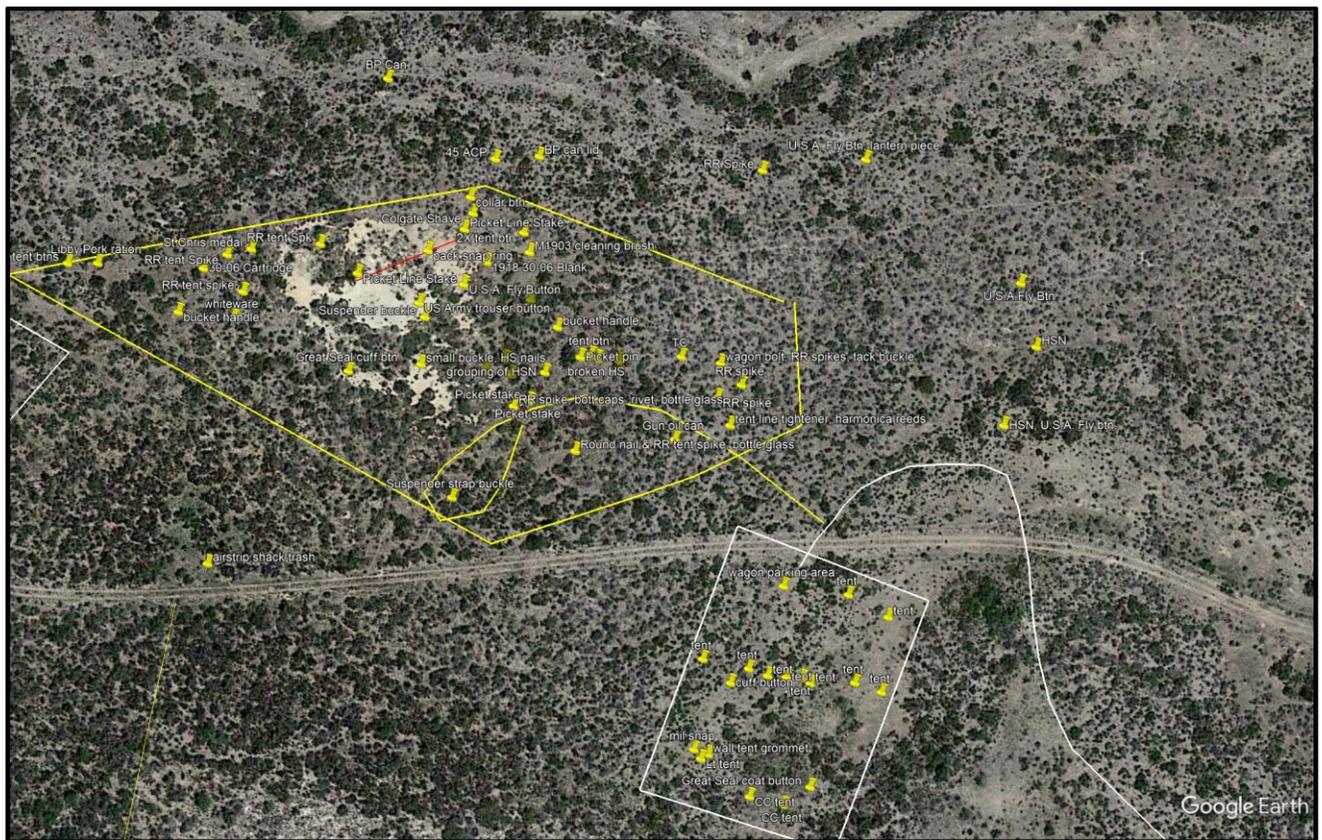

Artifacts from the eastern area indicate the units coming and going from this camp were likely in the WWI timeframe. From our research, this would have been the 14th Cavalry Regiment. Although the camp covers a little over two acres, it appears to be a disorganized layout, and may only have been occupied by a spread-out half company.

The camp centers on an area that is unnaturally devoid of vegetation. This is the area that contained the horses. An area constantly beaten down by a good number of horses would create this type of area. Within this area we found in-ground picket line stakes, picket pins, many cut and uncut horseshoe nails, and 30-06 blank cartridges. Blanks were used by cavalry to get their horses used to gunfire.

Throughout the central area we also found many bundles of rolled-up baling wire. These wire bundles are evidence of hay bales brought in by train to feed the horses, and indicates that this camp was logistical base camp for cavalry patrols.

Surrounding the central area we found numerous groupings of railroad spikes that were used as tent stakes, pup tent buttons, tent grommets, uniform buttons, military-supplied personal items, and M1903 30-06 gun cleaning bore and brushes. At one tent site someone left their tent-line tightener behind. To the north is a slight slope leading to a canyon. This slope was used for trash dumping and many more military ration supply items were found throughout this dumping area.

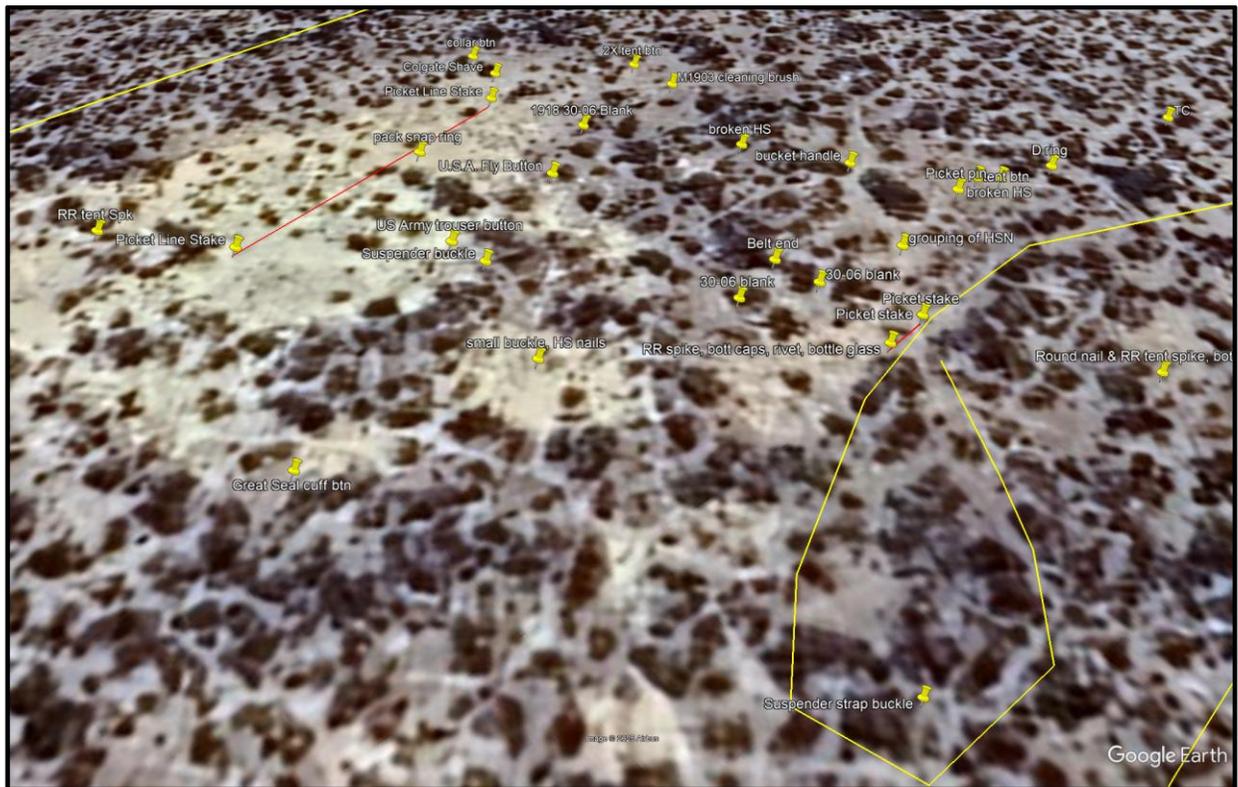

There is also a wagon trace leading into this camp that is separate from the wagon trace for the infantry camp. Even small cavalry patrols moved with a support wagon, as seen in this 1916 photograph of the 14th Cavalry Regiment detachment on patrol along the border. (14th Cav)

Separate Cavalry and Infantry Areas (horse picket line in red) (Google Earth)

14th Cavalry Regiment Detachment On Patrol (support wagon at rear)

Wagon Trace With Mule Picket Line (in red), Horse Picket Line Upper Left (in red) (Google Earth)

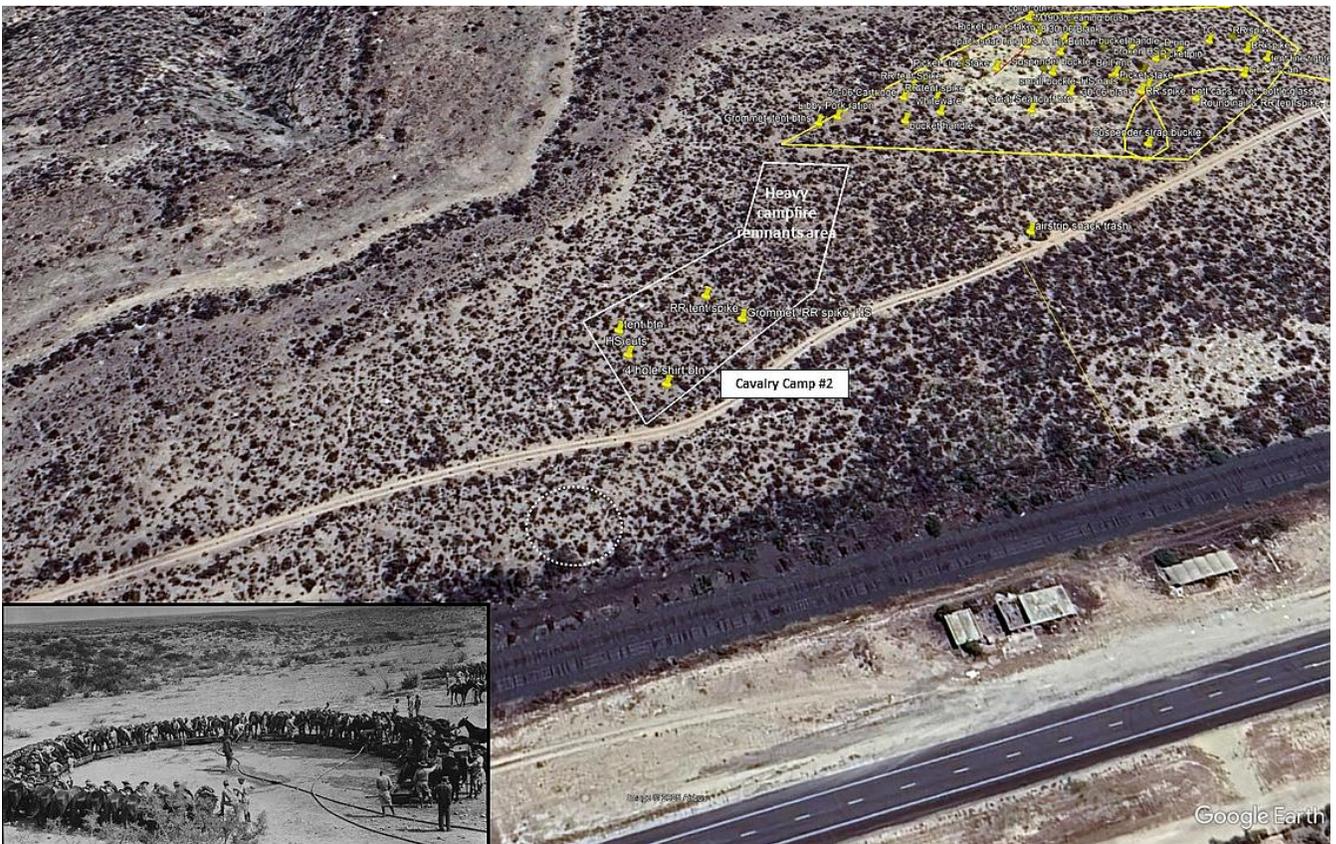

Picket lines (identified by red lines in photo) were identifiable by special picket line stakes, probably brought in on the support wagon. These were probably made in garrison by the blacksmith. It is interesting that the short picket line is right in front of where the wagon trace showed a turn-around parking area. This short picket line probably was for the wagon mules, keeping them separate from the horses and near the wagoneer location. This location was also near where we found a home-made

picket pin and many horse shoe nails. Our theory is that the horses that needed shoeing were probably pulled from the picket line individually, taken to the picket pin to be tied, and worked on for re-shoeing.

Further west of the heavily laden artifact eastern camp appears to be a separate cavalry camping area. This was probably occupied during a completely different period of time. The camp layout is in a dogleg design. The forward area appears to be command section and a blacksmithing area. The rear area is the lower ranking trooper's area. This area is fairly clean of artifacts, but thick with ash rings from campfires. The organization of this layout, and the fact we found indication of a wall tent, points to a company-level camp. We found a wall tent grommet at this location, indicating this was probably a company size camp with a captain in charge.

This second area is the area of the 5th Cavalry watering photo, leading off this report. The watering on multiple stops at this location might have caused a change of vegetation in the shape of that circle, indicated by white arrows in the imagery photo below. This area was matched to the photo by using a drone over the rail car area and matching the terrain in the background. Analysis of the circle dimensions match in size. This watering location is also in the reported area of the former depot. (Amistad) The photo of the horse watering is a company - Troop B of the 5th Cavalry Regiment.

Neither the vegetation, nor artifacts indicate where the horses were picketed. They were probably somewhere between the unit camp and the railroad tracks. That area was heavily bulldozed when the newer tracks were laid.

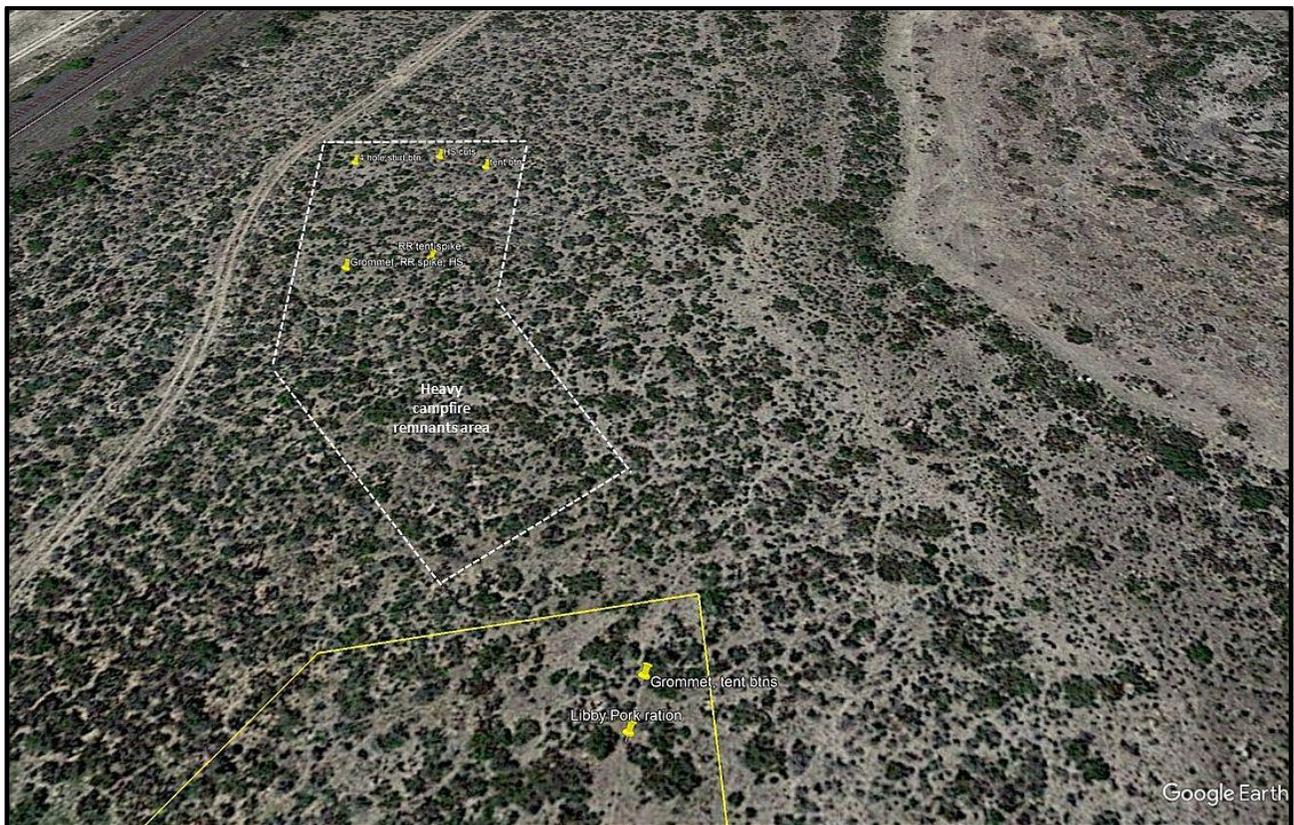

Second Cavalry Camp (Google Earth)

Graffiti in a cliff shelter overlooking the Pecos River one mile from the camp by a 5th Cavalry soldier, dated 1938, is good evidence that there was a camp nearby and not just a watering stop at that time. The last cavalry unit to patrol the Rio Grande was the 112th Cavalry Regiment. They conducted patrol duties from 1941 until they were transferred overseas in 1942 to join the war. That is when the Civil Air Patrol took over patrol duties of the Texas border.

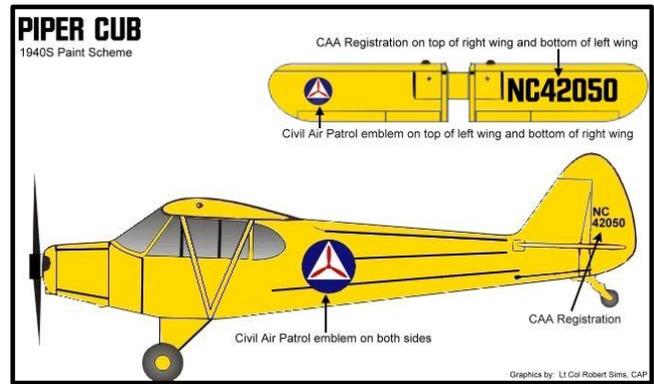

Graffiti: "Robert McCown Abilene, TX May 19, 1938, 5th U.S. Cav"

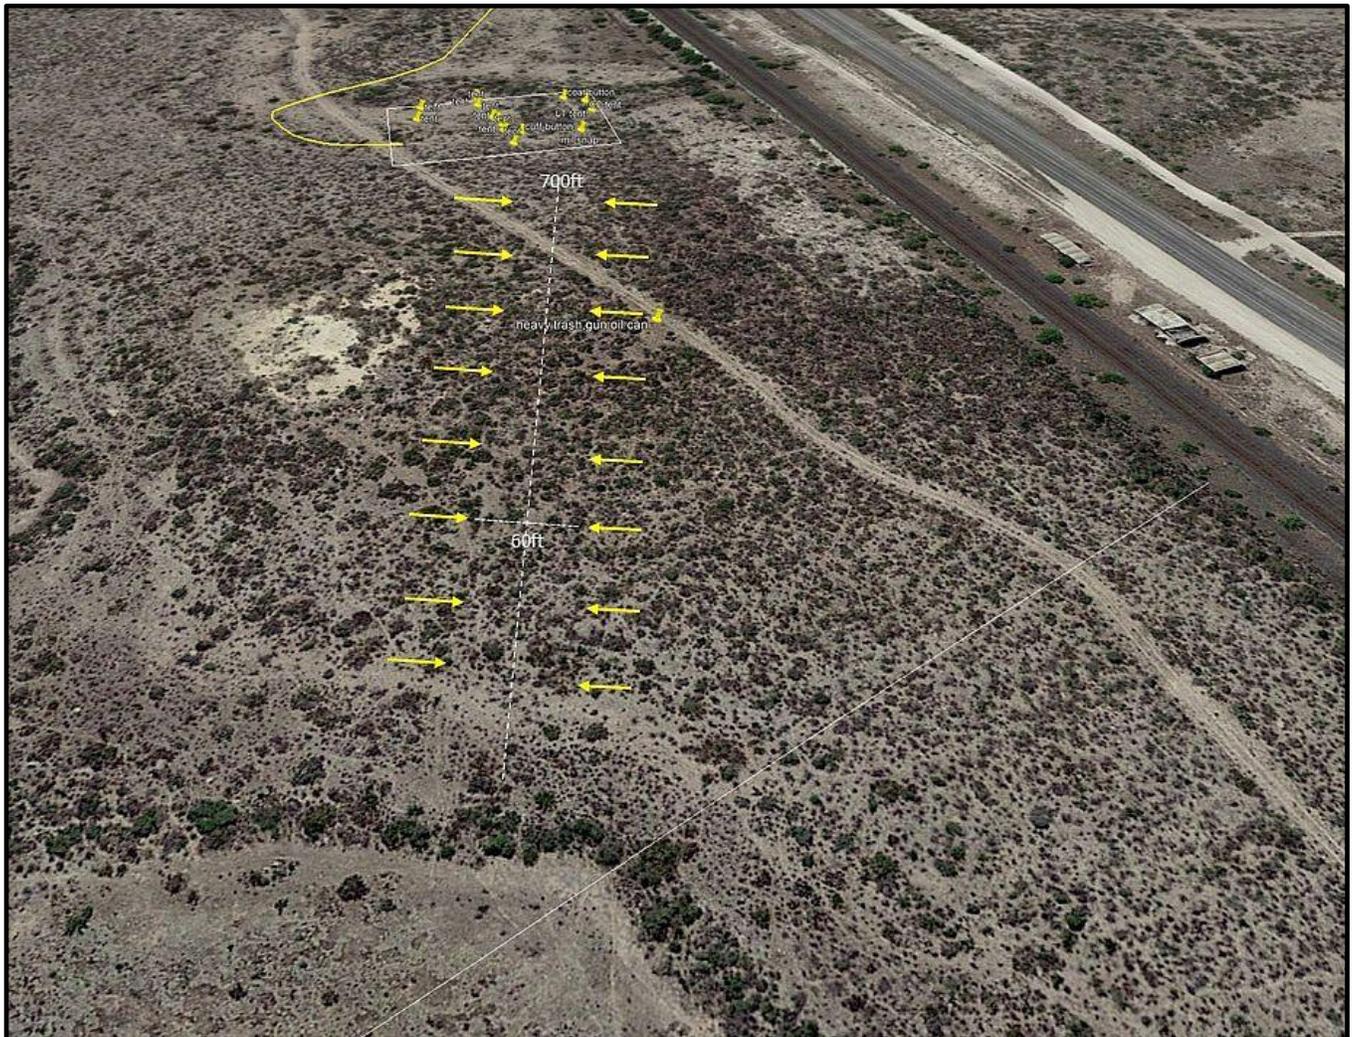

Second Cavalry Camp (Google Earth)

Shumla Airstrip: Post WWI & II

A 700-foot dirt airstrip was also constructed on this property in 1919 for the early air patrols guarding the border and rail bridges. It was an intermediary emergency airstrip for the 1st Surveillance Group's 90th Aero Squadron. Satellite imagery reveals vegetative growth of the formerly cleared airstrip area, showing two lines measuring 60 feet apart.

Former Shumla Airstrip (Google Earth)

Post WWI:

When a large force of Villistas moved north toward Ciudad Juarez in 1919, the Commanding General of the Southern Department received orders to seal off the border if they took Juarez. The general ordered Air Service from Kelly and Ellington Airfields to Fort Bliss, Texas, to patrol the border. On June 14th, the Mexican side turned into a battle for Juarez. Stray bullets killed two and wounded six on the American side of the border. DH-4 aircraft began arriving on June 19th, and the 1st Aero Surveillance Group was born. Sectors were created for patrols, and four squadrons began patrolling the southern border. The 90th Squadron patrolled the sector from Eagle Pass to Sanderson, Texas. (Maurer) They created the Shumla airstrip as an emergency landing strip during this time. Shumla resident's recollections of the bulldozer construction for the airstrip were conveyed to archeologist Elton Prewitt during his initial investigation as the property owner.

Border Patrol Air Bases, 1919 (map by Maurer)

The aerial patrols searched along the border for bands of men that might be illegally crossing and report to the nearest cavalry post the particulars of the activity. Often they were reporting on bandits involved in cattle and horse stealing.

WWII Civil Air Patrol:

The Civil Air Patrol's Southern Liaison Patrol section, which was active from October 1942 to August 1944, probably reconstituted this emergency airstrip for their patrols. Some of the artifacts found at the support shack area clearly point to WWII era. The Southern Liaison Patrol was commonly called the "CAP Border Patrol."

The Civil Air Patrol was formed to provide civilian air support to aid the war effort of WWII through border and coastal patrols, military training assistance, courier services, and other activities. With the approval of the Army Air Forces, the Civil Air Patrol was created by Administrative Order 9, signed on 1 December 1941. Conceived initially to patrol for enemy submarines or warships off the U.S. coasts, it was soon expanded to patrol the Mexican border from Brownsville, Texas, to Arizona. This expanded mission was designated the CAP Southern Liaison Patrol began in October 1942. (CAP)

The mission of the Southern Liaison Patrol was:

“to patrol the boundary [border] to prevent any surprise attack on isolated sections of the country by enemy forces or raiding parties; to detect any suspicious activities or the presence of suspicious persons, conveyances, constructions, installations, or directional markings; to prevent the observation by enemy elements of our operating units; to report suspicious aircraft, activity or flights, whether by American aircraft or enemy aircraft; to report possible acts of sabotage visible from the air; to detect any signals which might be directed to enemy units on either side of the border; to cooperate to the utmost with our ground troops on any specified mission or occasion that might arise; and to transport personnel or correspondence between units of the Southern Land Frontier.”

El Paso and Laredo were designated the two main bases for the Southern Liaison Patrol. Two subordinate bases to those were Marfa and Del Rio. The table of organization allocated 13 aircraft and 61 personnel for Laredo; 102 personnel and 24 aircraft for El Paso. If not for the Civil Air Patrol, the Army’s Southern Land Frontier may have been forced to assign thousands of military personnel needed elsewhere in the war effort to patrol the border on foot or in jeeps. (Blazich)

The two subordinate bases are very far apart for small planes. It is approximately 330 border-flying miles between Marfa and Del Rio. More small airstrips were needed for emergency landings or refueling. Dryden was chosen as the significant emergency airfield between Marfa and Del Rio. (Ragsdale) Dryden is 100 miles from Del Rio, and the Shumla site is half that distance. Although there is no record of this Shumla airstrip, if any loitering was requested to support the Pecos River High Bridge defense forces, the Shumla site was a perfect additional location for refueling or emergency landing. A 700-foot airstrip can only accommodate a very light and small aircraft, such as those used by the Southern Liaison Patrol. Of the aircraft listed in records, all would be able to land and take off on a 700-foot dirt airstrip.

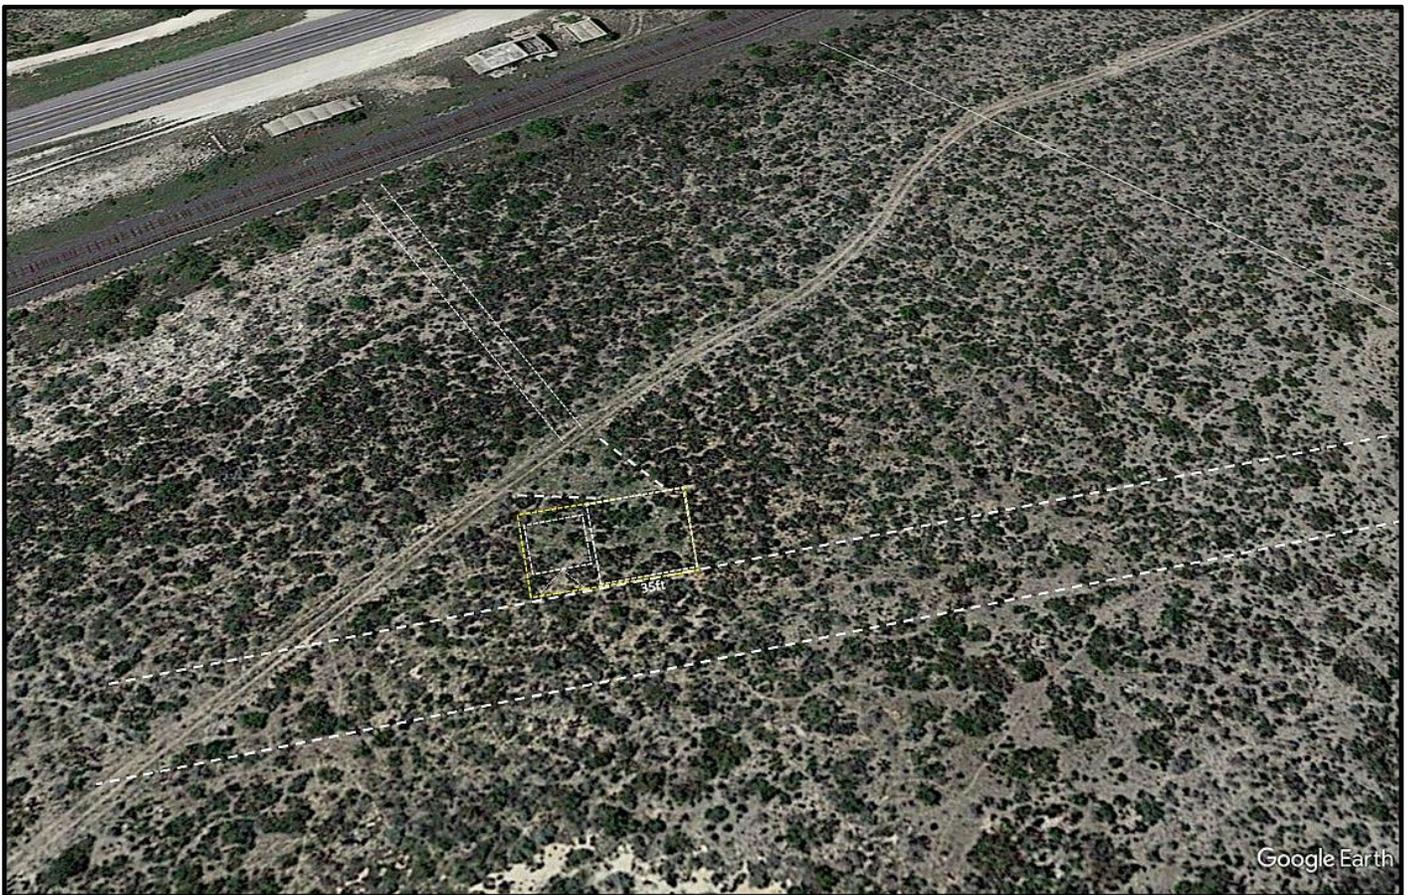

CAP aircraft at Southern Liaison Patrol Headquarters, Biggs Field, El Paso (courtesy Richard Hagmann, Ragsdale)

CAP aircraft at Marfa Airfield 1943 (http://www.airfields-freeman.com/TX/Airfields_TX_BigBend.htm)

Alongside the airstrip, anomalous vegetation growth seen from above indicates a clearing for a probable aircraft parking area 35 feet wide, a small area for support shack or large container box, a vehicle parking area, and an entrance road that comes across the tracks from the old highway. This was probably serviced by the 8th Regiment of the Texas State Guard that was stationed on the east side of the Pecos High Bridge at that time (covered earlier in this report). This area is heavily littered with trash that does not match the type of artifacts from the nearby cavalry camp or railroad trash. There is no way to know whether this airstrip was ever used. But it was available and maintained if ever needed.

Shumla airstrip and support area (Google Earth)

Some of the trash littering the airstrip support shack area.

Significant Artifacts

Infantry Area

Two WWI Great Seal buttons were found in the infantry area near the tent sites. The first and oldest is a cuff button found near one of the probable enlisted tents. The cuff button is backmarked Badger Mfg Co. Racine Wis, manufactured 1902 – 1910.

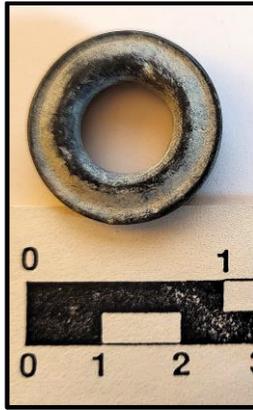

Great Seal Cuff Button

The second is a coat button found near the probable captain's tent. The coat button is backmarked with R. Liebmann Mfg Co. 'M16.' This is probably indicating that it was manufactured in 1916. The loop began to be used around 1919.

Great Seal Coat Button (1919+)

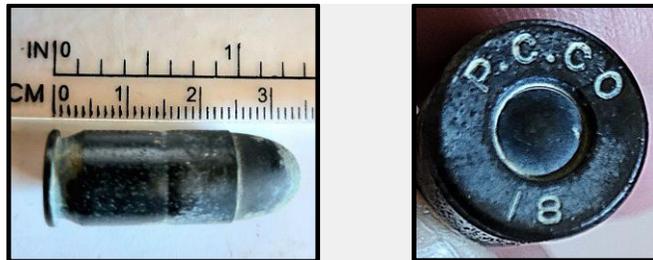

Wall Tent Grommet (found near probable lieutenant's tent site)

Cavalry Area

The cavalry area diagnostic artifacts appear to cover both the pre-WWI and WWI era. The most diagnostic artifacts found thus far are a government-issued 30-06 blank cartridge, date stamped April 1914 and a 45 ACP dated 1918. Cavalry and infantry used the same M1903 Springfield rifle, chambered for 30-06 (Canefield). The 30-06 cartridge was found in the heart of what appears to be the cavalry camp. The 45 ACP was on the northern edge of the camp, where trash items were being dumped.

Unfired government-issued 30-06 blank cartridge for M1903 Springfield rifle, dated 1914

1918 45 ACP

Unfired government-issued 30-06 blank cartridge for M1903 Springfield rifle, dated 1916

Railroad spikes used as tent stakes

Army trouser button

Military Web Belt Snaps

D-ring from saddle or pack (found in probable corral area)

Example

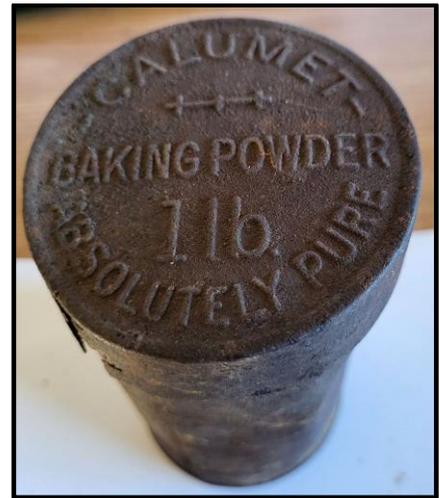

Tent line tightener

Suspenders buckle (“pat appd for”)

Harmonica reeds

Calumet Baking Powder 1912 – 1920s

M1903 30-06 Gun Cleaning Brushes and Patch Holder

Military Ration: Libby McNeil & Libby Pork Sausage Meat With Cereal. Est 1922. U.S. Special Products Division & Product Safety Division

Bottom half of U.S. Army supplied WWI personal medical kit

Example of top of kit

Pull ring from medical kit

Government issued Colgate Shaving Stick can

Broken Picket Line Stake

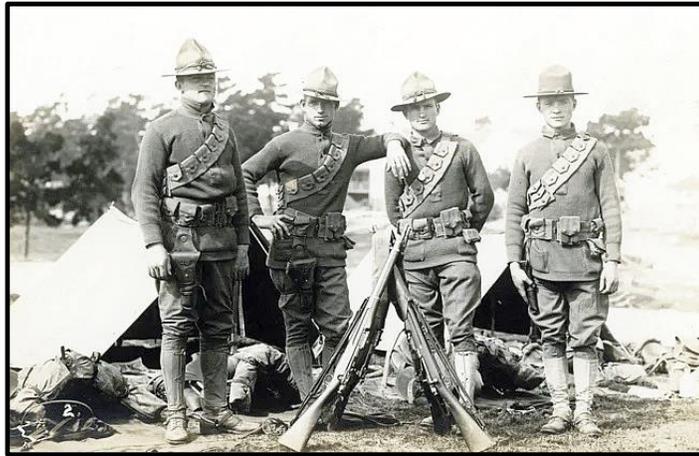

Broken Heavy Picket Pin

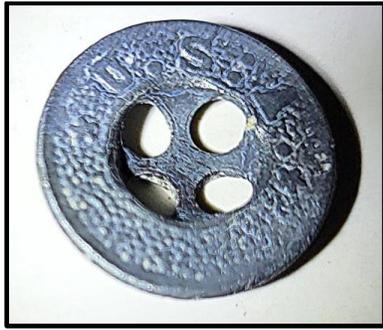

Tent buttons and grommets. Large grommet probably for wall tent

(Pup tents were in two pieces. Each soldier had one piece. The two were buttoned together on top to make a 6 X 4 tent for two people, as in the following example.)

U.S. Army WWI-era collar, shirt, trouser, cuff buttons

Trouser fly button

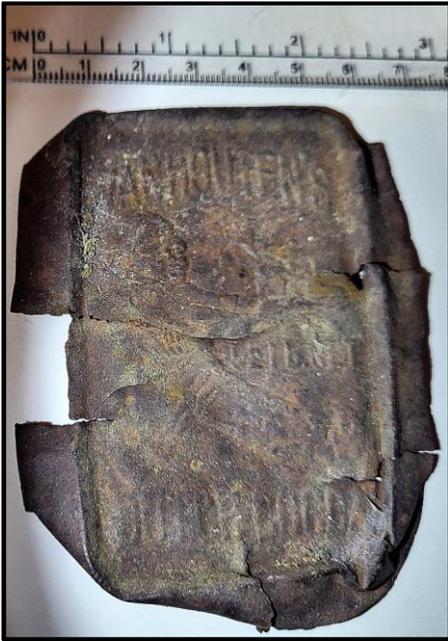

Cuff Button (1918+)

Military Tent Stakes In Western Area Camp, 1919+ Period

Pack snap, roller buckle, suspenders buckle, keepsake

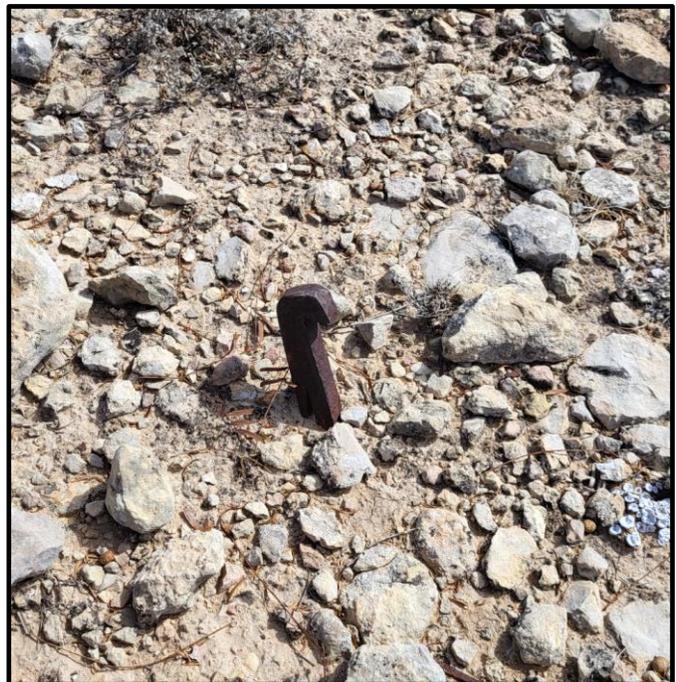

Vanhouten's Dutch Cocoa (military ration)

Wall Tent Grommet Found At Eastern End Camp Area

St. Christopher Medal

In-ground Picket Line Stake

Shumla Airstrip Support Area

WWII-era gun oil can

55-gallon drum lid

Sheet metal section with wood strip attachment

Door hinge, WWII-era milk bottle top, fired brick, large metal and ceramic washers, heavy-gauge wire

Appendix B

Post Returns April 1916 Showing Duty at High Bridge

NOTE 1.—As soon as practicable after the 1st day of each month, every officer commanding a post will send one copy of this return to The Adjutant General of the Army, and one copy to the commanding general of the department. One copy will be retained. The making of carbon copies is authorized, but they must be clear and distinct and the original copy must be forwarded to The Adjutant General of the Army. The return will consist of one Form No. 27—A. G. O., and as many Forms No. 28—A. G. O., as may be necessary, fastened together along the fold indicated.
