

ENGINEERED WATER SOLUTIONS FOR HARD WATERS

From system design and diagnostics to full-scale treatment and reuse

At a glance

Avivid Global Water is an engineering water solution company for heavily contaminated waters.

We support mining, landfill, oil and gas, and any industry that generates wastewater.

Past Performance

Avivid has purified a wide variety of industrial wastewater including:

- landfill leachate
- acid mine drainage
- coal mine ponds
- oil and gas produced water
- cooling tower blowdown water
- agricultural wastewater

CHALLENGES

Wastewater and the pollutants it carries is a constant issue for many industries. From compliance issues, to increased capital costs, industries need cost-effective and sustainable ways to purify their water, maximize their supply, and recover critical resources.

SOLUTIONS

Avivid provides customized water treatment design, installation, integration, remote monitoring, and offers clients their choice of employee service training or maintenance contracts.

Customized Solutions

Resource Recovery

Increased Revenue

BENEFITS

1

End-to-End Engineering Water Solutions

We don't just sell a reactor — we deliver engineered water solutions customized for your water chemistry, compliance requirements, and reuse goals.

2

Patented Chemical-Free Technology

TurboCoag® is a safe, self-cleaning, lower cost, electrocoagulation water treatment system. It produces 30-70% less sludge and acts as a natural biocide.

3

Resource Recovery

Our water treatment solutions not only remove pollutants but also recover critical metals, rare earths, and other precious resources that our clients need.
