

# COMFORTABLE & PREDICTABLE

*teeth alignment*

**FLEXALIGN**<sup>®</sup>  
CLEAR ALIGNERS

## WONDERING IF FLEXALIGN IS RIGHT FOR YOU?

Flexalign is designed with brilliance to transform your smile in the comfort of your space. Providing you with the freedom to go about with your day-to-day life and enjoy it, while modestly changing your smile.

The most significant objective of getting Flexalign is to align your teeth for a beautiful smile. The ease of wearing Flexalign not only allows you to live comfortably but removes the barriers that traditional braces have.

## WHILE LOOKING FORWARD TOWARDS THE PRIMARY GOAL FLEXALIGN CAN FIX ISSUES LIKE:

- Gapped teeth
- Crowded teeth
- Overbite

- Crossbite

- Underbite

Flexalign uses advanced orthodontic procedures and technology to design each of the braces. It said right that good things take time, but Flexalign doesn't need an extended period of treatment like traditional braces.

Feel great about your choice, curious to know how we design your treatment plan?

- **Examining your smile:**

A dental specialist will examine your teeth to eliminate any severe gums issues. If you have any oral problems, they need to be treated before your alignment treatment.

- **It starts with a 3-D dental scan/impression:**

A dental scan of your impression to determine the present alignment of your teeth. Your dental treatment will be carried out on the basis of a 3-D Dental scan and Video stimulation that will be shown and approved by you and your dentist.

- **From digital to physical:**

Customized stepwise aligners are printed with the help of 3D printing, which will gradually move your teeth in the desired positions. The dispatched aligners need to be changed every two weeks.

- **Previewing your smile correction:**

The alignment of the teeth happens gradually and might need alterations as per the shifts in your treatment plan. You can see the difference in the alignment of your smile from before to after Flexalign.

## **Living with Flexalign clear aligners**

- Flexalign can treat most issues, including crooked teeth, gaps, and over/underbites.
- Keeping your teeth healthy and maintaining proper hygiene will get easier with Flexalign as compared to traditional braces.
- Your friends, family, and co-workers may not even notice you are wearing aligners, even up close.
- The average Flexalign treatment is one year, but you can adhere to additional measures if your teeth are still not perfect.
- Compared to tightening and repairing braces, Flexalign does not hurt and is an excellent, much more comfortable alternative to its metal counterpart.
- The cutting-edge alternative to traditional braces, Flexalign clear aligners are customised for comfort and convenience.
