

CLASSIC PROVENÇAL KITCHEN

Do-it-yourself
executable
project

Prepared by: Elidio S. G. Junior
Carpenter and Civil Engineer

DIY kitchen cabinet design
project with detailed instructions
and cutting plan included.

Elidio S. Junior
ENGENHEIRO CIVIL

Easy to understand:
save material with this
optimized cutting plan,
eliminating waste and
featuring exploded views
for easy comprehension.

1 KITCHEN CABINET TECHNICAL GUIDE

1.1 Project Contents

This technical catalog contains all the information required to build the kitchen cabinets included in this project. The catalog includes detailed cabinet dimensions, exploded assembly views, optimized MDF cutting layouts, a complete material list, a hardware list, cabinet module measurements, and assembly reference diagrams. All cuts were designed to optimize the use of MDF sheets and minimize material waste.

2.1 Intended Users

This project is intended for DIY builders, carpenters, cabinet makers, woodworking enthusiasts, contractors working with custom cabinetry, and anyone interested in building modular MDF kitchen cabinets. Basic woodworking knowledge is recommended; however, the project can also be completed by beginners who have the appropriate tools and carefully follow the instructions.

3.1 Important Notice

This product consists of digital technical documentation. The files included in this catalog provide the plans and technical drawings necessary to build the kitchen cabinets. This project was designed for kitchens with walls up to 4 meters (approximately 13 feet / 157 inches). If the wall length is greater than the project dimensions, filler panels may be used to close any remaining gaps. If the wall length is smaller than the provided dimensions, cabinet modules may need to be adjusted accordingly. Always measure the installation space carefully before starting the project.

4.1 Skill Level

Intermediate.

This project requires basic woodworking skills, including panel cutting, drilling hinge cups, cabinet assembly, and wall mounting. Beginners may also complete this project if they have the appropriate tools and carefully follow the instructions.

5.1 Estimated Build Time

Build time may vary depending on experience level and available tools. The estimated build time is between one and three days. This estimate includes cutting MDF panels, applying edge banding, cabinet assembly, hardware installation, and cabinet mounting.

6.1 Tools Required

The following tools are recommended for completing this project: circular saw or table saw, guide rail or cutting track (recommended when using handheld saws), drill or drill press, Forstner drill bits for hinge cups, screwdriver or impact driver, measuring tape, carpenter's square, clamps, and a pencil or marking tool.

Cutting blades should be designed specifically for MDF to ensure clean cuts and to reduce chipping.

7.1 Hardware and Materials

All required hardware is listed in the catalog, including cabinet hinges, drawer slides, screws and fasteners, mounting brackets, and edge banding. The drawers are designed for wide telescopic drawer slides, but other slide systems may also be used depending on preference and availability.

8.1 Recommended Kitchen Size

This project was designed for kitchens with walls up to 4 meters (approximately 13 feet / 157 inches). The cabinet modules can be arranged along any wall up to this width. The modular design allows adjustments in layout depending on the installation environment, including spaces with windows.

9.1 Cabinet Mounting Options

Upper cabinets must be securely mounted to the wall. Two mounting methods are recommended.

10.1 L-Bracket Mounting

L-brackets may be used for cabinet mounting. Recommended specification: minimum thickness of 1.2 mm (0.047 inches) and load capacity of at least 30 kg (approximately 66 lbs). The brackets should be securely fixed to both the wall and the cabinet structure.

11.1 French Cleat Mounting

Another mounting option is the French cleat system. This system uses two wooden strips cut at a 45° angle that interlock to support the cabinet weight. French cleats distribute the load along the wall and allow easier cabinet positioning during installation.

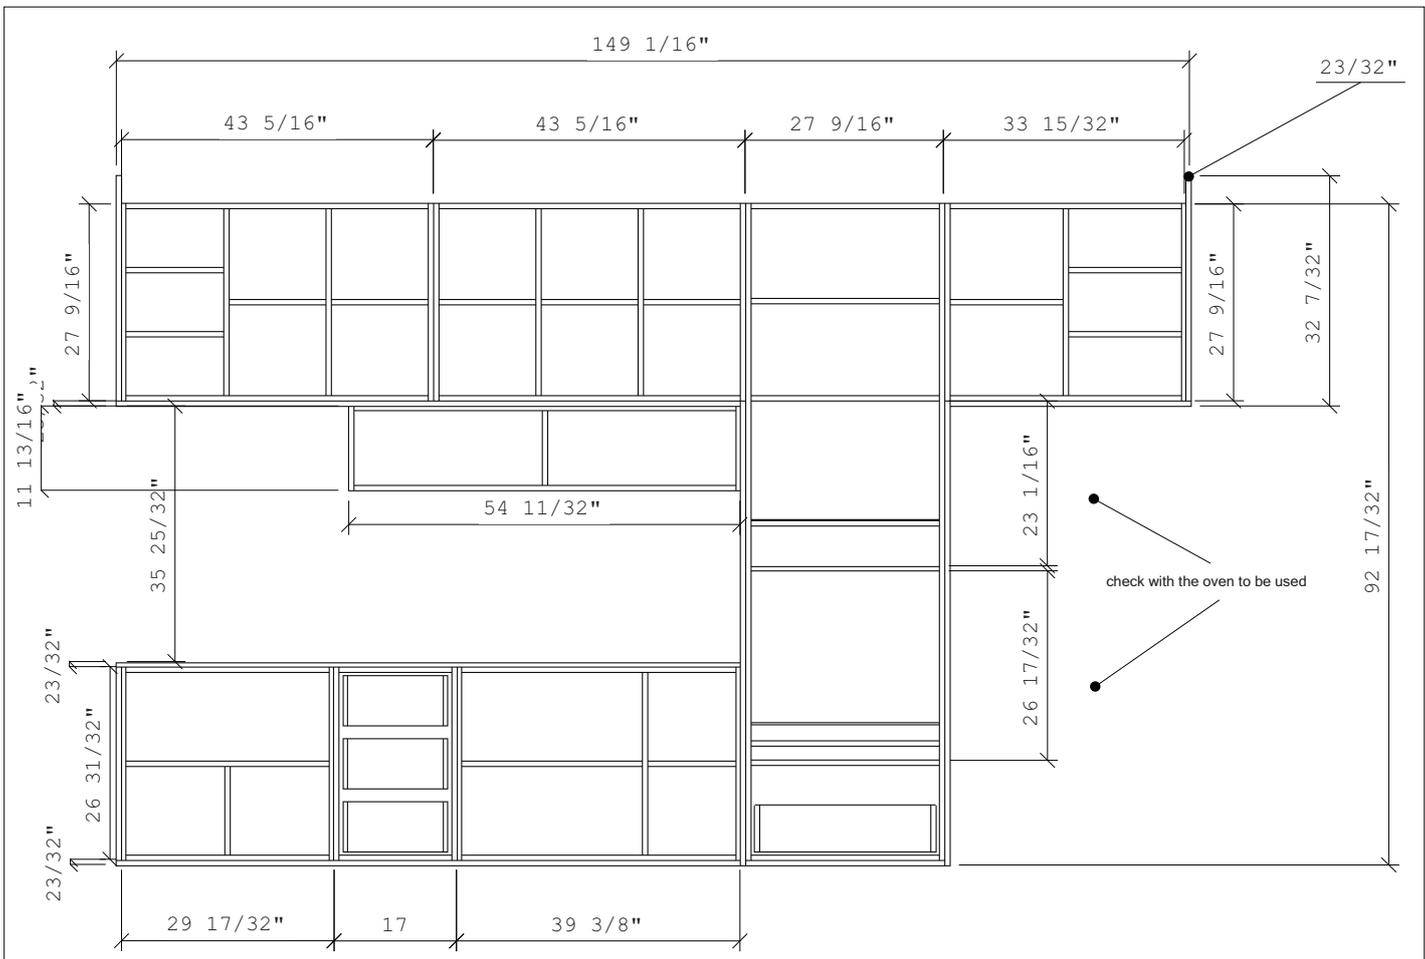

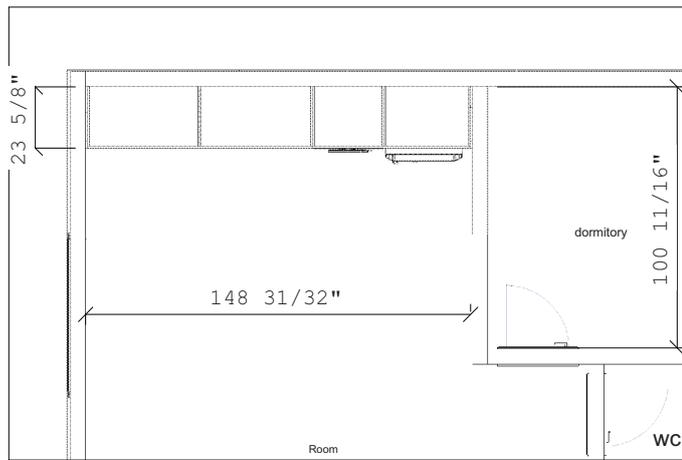

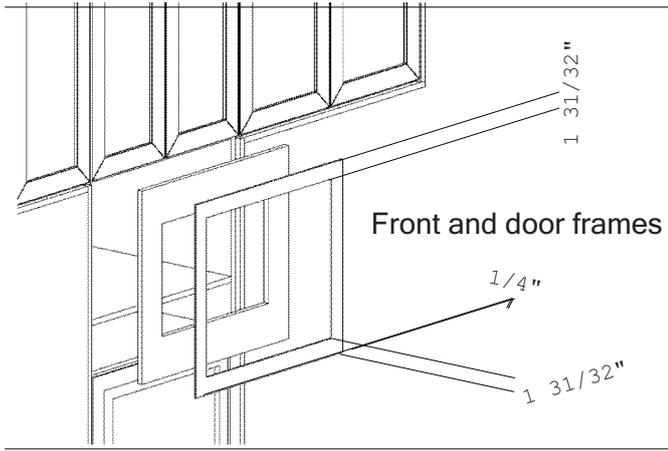

12.1 Size Adjustments

If the wall length exceeds the project dimensions, filler panels may be used to close visible gaps. These panels can be produced using leftover MDF pieces from the cutting process. If the available wall space is smaller than the project dimensions, cabinet modules may need to be resized before construction.

13.1 Before Starting the Project

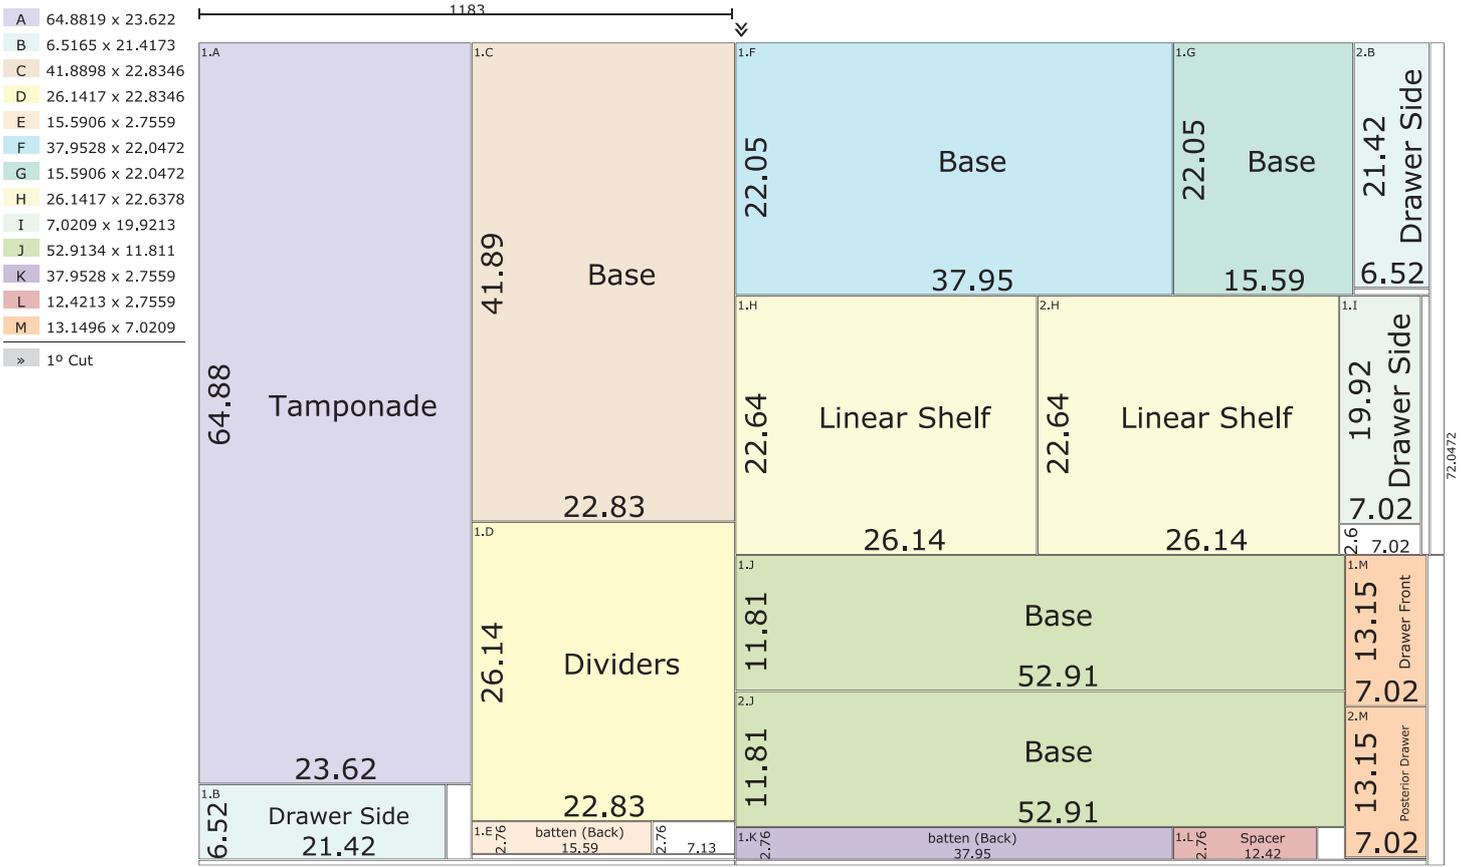

Before beginning construction, measure the available space carefully, verify wall dimensions, and check the location of windows, doors, and electrical outlets. Accurate measurements are essential to ensure proper cabinet installation.
