
Metal mesh cylinder

Working principle and characteristics

Metal mesh cylinder, made of single layer or multiple layers wire mesh, layers and the mesh determined by different conditions and usages. It's with good purification for liquid or particles 5-500um, with large flow, and it can be reused after washing. Its advantages: Filter accuracy is the absolute value, with high center rate, high pressure affordable, good straightness, no burr and with long service life.

Material: 304, 304L, 316, 316L for stainless steel perforated mesh, woven mesh, welded mesh, brass mesh, aluminum foil mesh, etc.

Application:

1. Petrochemical, pipeline for oil field filtration;
2. Refueling equipment, engineering machinery and equipment fuel filtration;
3. Water treatment industry equipment filtration;
4. Pharmaceutical and food processing field.
