Safe (≥90%) Review (75-90%)

High Risk (<75%) Missing/Weak

Payment Terms 67%
Category: PAYMENT HIGH RISK
Type: Deviation
Unfavorable payment terms

Governing Law 42%
Category: GOVERNING LAW HIGH RISK
Type: Deviation
Disadvantageous jurisdiction

Dispute Resolution 51%
Category: DISPUTE RESOLUTION HIGH RISK
Type: Deviation
Deviation from standard

Confidentiality 37%
Category: CONFIDENTIALITY HIGH RISK
Type: Deviation
Weak confidentiality protection

CONTRACT INTELLIGENCE PLATFORM

UniContractAI for Pharma & Life Sciences

AI-powered contract intelligence engineered for compliance, risk management, and speed — purpose-built for the pharmaceutical and life sciences industry.

Key Challenges Facing Pharma Contract Teams

Pharmaceutical and life sciences organizations manage vast, complex contract portfolios under intense regulatory scrutiny. Manual processes and fragmented data create critical blind spots that delay deals and expose companies to unnecessary risk.

Complex Contract Portfolio

Managing agreements across R&D partnerships, licensing deals, CRO engagements, and global supply chains — each with unique terms, obligations, and stakeholders.

Regulatory Risk Exposure

Non-compliance with FDA, EMA, and GMP standards can result in costly penalties, audit findings, and reputational damage across regulated markets.

High-Risk Clauses

IP ownership, indemnity obligations, and confidentiality terms require expert scrutiny — yet are often buried in lengthy agreements and missed during review.

Data Silos Reduce Visibility

Contracts stored across disconnected systems prevent holistic portfolio oversight, making it nearly impossible to identify patterns or emerging risks.

Slow Manual Negotiations

Lengthy review cycles and back-and-forth redlining delay time-to-market for critical partnerships, directly impacting commercial outcomes.

How UniContractAI Solves This

UniContractAI replaces fragmented, manual contract workflows with an intelligent, end-to-end platform — accelerating review cycles, enforcing compliance, and surfacing risk before it becomes liability.

AI-Driven Clause Extraction

Automatically identify, extract, and benchmark critical clauses against internal standards and market norms — in seconds, not hours.

Predictive Risk Simulation

Run Monte Carlo scenarios and Force Majeure stress tests to model contractual exposure and anticipate downstream consequences.

Automated Regulatory Compliance

Continuously validate contracts against FDA, EMA, and GMP requirements, flagging deviations before agreements are executed.

AI Negotiation Agents

Deploy intelligent redlining automation and AI negotiation agents to accelerate deal closure while protecting your legal position.

Core Features

Four interconnected capability pillars deliver comprehensive contract intelligence – from initial clause review through final execution and ongoing compliance monitoring.

Contract Intelligence

- **Clause Benchmark** – Compare terms against market standards
- **Clause Auditor** – Automated review for deviations and anomalies

Risk Management

- **Simulation Engine** – Model contractual outcomes
- **Exposure Gauge** – Quantify and prioritize risk

AI Negotiation

- **Chat Interface** – Natural language contract queries
- **AI Agents** – Autonomous redlining and counter-proposals
- **Smart Proposals** – Data-backed negotiation positions

Compliance Automation

- **Regulatory Rule Engine** – FDA, EMA, GMP alignment
- **Continuous Monitoring** – Real-time compliance alerts
- **Audit Trail** – Full traceability for regulators

Advanced Capabilities

Beyond core contract review, UniContractAI offers enterprise-grade tools that connect your contract data to the broader business – enabling strategic decision-making at the portfolio level.

Contract Graph

Unified data integration layer that maps relationships across your entire contract ecosystem, eliminating silos and enabling cross-contract analysis.

Portfolio Analytics + ERP Sync

Real-time portfolio dashboards synchronized with ERP systems, giving finance, legal, and operations a single source of truth.

What-If Simulations & Digital Twin

Model the impact of contract changes, market shifts, or regulatory updates before committing – reducing uncertainty in high-stakes decisions.

Legal Co-Pilot & Arbitration Risk

AI-assisted legal guidance and predictive arbitration risk scoring help counsel prepare for disputes and negotiate from a position of strength.
