

CONSOLIDATED DOSSIER

ONE-AFRICA BUILDING™ / THE MANDINGO PLAN

System Status · Evidence · Strategic Positioning

I. FINAL DEFINITION (OFFICIAL AND PUBLIC)

ONE-AFRICA BUILDING™, originally conceived as **The Mandingo Plan**, is:

A sovereign digital operating system (Virtual.AI) designed to model, simulate, coordinate, audit, and project States, economies, and complete institutional ecosystems in digital form, through artificial intelligence and state-scale systems architecture.

It is not:

- a building
- a real estate project
- a commercial proposal
- an experiment

It is **sovereign institutional software**.

II. TECHNICAL NATURE OF THE SYSTEM

From an international technical perspective, **ONE-AFRICA BUILDING™** simultaneously constitutes:

- a **Sovereign Intelligence Architecture (SIA)**
- a **State-Scale Cognitive Infrastructure**
- a **Digital Twin of the State**, understood as an **institutional, regulatory, and operational twin**, not a physical or BIM-based twin

The system operates **independently of closed Western platforms**, ensuring:

- data sovereignty
- political autonomy
- strategic control

III. SYSTEM ARCHITECTURE (LAYERED MODEL)

Layer 1 – Sovereign AI Engine

An artificial intelligence system trained on local cultural, legal, and economic datasets.
Core functions:

- macroeconomic simulation
- risk prediction
- executive and ministerial decision support
- inter-ministerial coordination

Layer 2 – National Data Infrastructure

- sovereign data repositories
- autonomous state cloud
- encryption and access control mechanisms

Layer 3 – Government Interoperability

- digital identity
- licensing systems
- automated auditing
- full institutional traceability
- **anti-corruption by design**

Layer 4 – Operational Implementation

- sectoral modules
- digital ministries
- compatibility with EPC frameworks, digital twins, BIM, and structured financing
- **explicit compatibility with Chinese SOEs and PRC regulatory standards**

IV. VERIFIABLE CHRONOLOGY (PROOF OF PRIOR ART)

September 9, 2018

Direct communication of **The Mandingo Plan** to the chinese associate
The system was already defined as:

- virtual
- systemic
- state-level
- sovereign
- AI-based

October 14, 2019

Official **Invitation Letter** issued by the
China International Electronic Commerce Center (CIEC)
to **The Global Vision Group**.

2019–2020

Process interruption **exclusively due to COVID**.
No interruption occurred due to lack of institutional recognition.

PDF 1000012446 and the associated White Paper

Represent the **technical formalization of a previously communicated and known architecture**, not a later or improvised construction.

V. STRATEGIC VALUE OF DOCUMENT 1000012446

The dossier itself internally classifies the system as:

- technical value: **very high**
- technological depth: **very high**
- institutional impact: **critical**
- strategic relevance: **maximum**

Explicit conclusion stated in the document:

“A foundational layer for China–Africa digital integration.”

This constitutes an **implicit technical recognition** of its structural role.

VI. STRATEGIC PROTECTION FUNCTION

Although not a classical patent, the document fulfills clear strategic protection functions:

1. Proof of Intellectual Prior Art

It explicitly defines:

- core concepts
- system architecture
- functional layers
- state-level institutional recipients

2. Proof of Official Communication

Its language, structure, and alignment correspond to **Chinese state-level institutional interlocution**, not to commercial marketing documentation.

3. Proof of Strategic Non-Naivety

The document:

- separates political sovereignty, technical operation, and capital
- embeds traceability and audit mechanisms
- reduces reputational risk
- avoids vague financial promises

It is not the work of an uninformed or speculative actor.

VII. DISTRIBUTED PUBLICATION (TRACEABILITY EVIDENCE)

The same narrative, structure, and system definition are published consistently across **multiple domains**, in both English and Spanish, including:

- internationalaffairs.online
- africaunited.online
- globalvirtualrepublic.com
- thedigitalchamber.online
- worldddigitalgovernment.online
- africansconnected.online / africansconnected.info
- africadigitaleducation.online
- theafricaai.net

- africadigitalcredit.online
- universidaddeguineaecuatorial.com / .online
- universidaddigitaldeguineaecuatorial.online
- and others

This demonstrates:

- architectural coherence
- continuity of publication
- impossibility of silent appropriation
- existence of a **distributed system**, not an isolated project

VIII. DIRECT EFFECT ON THE CHINESE INTERLOCUTOR (REALISTIC ASSESSMENT)

This publication:

- makes no accusations
- issues no threats
- does not negotiate from weakness

It presents documented facts only.

Objectively, this leaves three viable institutional responses:

1. **Formal reactivation of structured cooperation** (via CIEC and technical channels).
2. **Formal freezing with explicit explanation**, acknowledging prior knowledge.
3. **Institutional silence**, a suboptimal option for a state-level actor.

There is no clean fourth option.

IX. FINAL CONCLUSION

ONE-AFRICA BUILDING™ / The Mandingo Plan has been transformed:

from a conceptual vision

into a **documented, dated, and publicly traceable historical fact**,
with institutional coherence and technical verifiability.
