

AI Chatbot Service

Graham Consulting offers a custom AI chatbot service for business websites. The chatbot is trained on the client's website, FAQs or documents and provides instant answers to visitors around the clock. It captures lead contact information automatically, saved to a spreadsheet for easy follow-up, and the client receives an email notification every time the chatbot has a conversation.

Price: €100 install fee then €100 per month. Current Graham Consulting clients pay €50 install. No contract, cancel anytime.

What is included:

A custom AI chatbot trained on the client's business. Installation with a single line of code - no technical headache for the client. Powered by a platform running the latest AI models. Security and data privacy built in. Ongoing maintenance and updates included in the monthly fee.

Most installs are live within a few days of the kick-off call.

This service is particularly well suited to businesses that already have website traffic but are not converting visitors into enquiries, businesses that receive a lot of the same questions, and businesses that want to be visible and responsive to the growing number of people using AI tools to find and evaluate businesses.
