HOW I WORK

Before I decide which plant goes where, I start with how you live and how you want to use the space.

Every garden begins with analysis: soil, light, wind, existing vegetation, structure, and your expectations for daily life in the garden.

That is why my services are designed as a sequence: first clarity, then design, then implementation support.

HOW TO GET STARTED

1. Request consultation → Tell us about your project
2. Site visit & discussion → On-site meeting (fee applies)
3. Technical brief → Receive personalized proposal
4. Contract signature → Confirm project details
5. Work begins

PAYMENT TERMS

Payment is made in three installments:

- 30% deposit upon contract signing
- 40% after design concept approval
- 30% upon project completion

SERVICES

01 · CLARITY AND THE FIRST STEP — CONSULTATION

Perfect for:

Clients who need a professional assessment before making decisions and want to understand what their plot needs, what its strengths are, and where to begin.
The consultation can be on site or online, depending on the location of the project.

What is included?

On-site visit or online session

The consultation can be in person (visit to the garden or plot) or online using photos, videos, and plans that you share with me. During this session I collect all the necessary information:

- **Soil condition:** composition, drainage, compaction
- **Existing vegetation:** what can be kept, what should be removed or transplanted
- **Climate and microclimate:** sun exposure, shade areas, prevailing wind, humidity
- **Infrastructure:** existing irrigation, paving, walls, levels
- **Your expectations:** lifestyle, desired maintenance level, aesthetics, uses of the space, general budget

Analysis and action plan document (delivered within 7 working days)

Not a generic PDF, but a document created specifically for your space, which includes:

- **Full diagnosis:** what your space has, what potential it holds, which problems need to be solved
- **Detailed work plan:** what to do, in what order, and why, with clear stages from A to Z
- **Plant recommendations:** which plants are suitable for your conditions, which to avoid, what to prioritise
- **Specific advice:** on irrigation, soil, maintenance, and what to keep in mind before buying anything

How can you use it afterwards?

This document can remain as the final result of our work — you have everything you need to move forward on your own or together with any gardener.
Or it can become the basis for the Full Garden Design if you decide to continue working with me. In that case the groundwork is already done; we do not start from scratch.

Price: 70 €

02 · BASIC DESIGN — A CLEAR ANSWER: WHAT TO PLANT AND WHERE

Ideal for: People who do not need a full project, but do want a professional and concrete answer to the question: what do I plant and where?

- What is included?**
- **Space analysis** (conditions, orientation, soil, existing elements)
 - **One developed concept proposal:** I do not give you random options to choose from, but one single, well-argued solution tailored to your specific space
 - **Planting plan:** a drawing showing the location of each species, quantities, and planting distances
 - **Plant list** with scientific and common names, so you can take it directly to the nursery

What is not included? It does not include technical construction documentation, a general garden design masterplan, or site work coordination. It is a service focused on planting.

What can you use it for afterwards? This document is a complete solution in itself: you have a clear plan, a plant list, and a planting layout ready to take to the nursery or hand over to any gardener.
If at some point you decide to go further — to design a full garden with technical drawings and construction documentation — this analysis and concept are already part of the work done. We do not start from scratch.

Price: Desde 800 €

03 · FULL GARDEN DESIGN — A PROJECT READY TO BE BUILT

Ideal for: People who want a fully considered, designed, and documented garden — ready to be built with complete confidence.

What is included? **Phase 1 — Consultation and analysis**
This package includes the Consultation (package 01) as the first step. The document created at that stage becomes the foundation for the entire project.

Phase 2 — Concept

- Two concept sketches with different design approaches
- Presentation and discussion of options
- Choice of direction and adjustments

Phase 3 — Project development

- **Masterplan:** complete vision of the designed space, zones, circulation, and main elements
- **Technical working drawings:** detailed plans of each element — paving, structures, levels, irrigation, lighting
- **Planting plan (dendrological plan):** planting drawing with all species, exact locations, planting sizes, and densities
- **Materials list:** specifications of plants, materials, and elements with commercial references
- **Visualization 3D**
- **Video 3D**

What happens afterwards? With this project you can go to any landscaping company to request a quote and have the garden built. Or you can hire me for Author Supervision (package 04) so I can personally oversee that everything is carried out correctly.

Price: **From 1300 €**

04 · AUTHOR SUPERVISION — THE CONFIDENCE IT WILL BE BUILT AS INTENDED

Ideal for:	People who already have a finished project and want to make sure the implementation stays faithful to the design, without surprises or improvisation on site.
What is included?	• Site supervision visits at key stages of implementation • Coordination with the team: I act as a link between the project and the gardeners or builders • Control of materials and plants: checking that what arrives on site matches what is specified in the project • Resolving issues on site: when something on the ground does not match the drawings, we make informed decisions instead of improvising • Follow-up report after each visit
Why does it matter?	A well-designed project can be ruined during implementation. Replacing a plant with “something similar”, moving a tree to a more “convenient” place, or planting at the wrong depth — these may seem like small details, but they turn into real problems after a couple of years. Author supervision is the guarantee that what is on paper becomes exactly what you imagined.
Price:	According to project
